BOTTLES, SHIPPING, STORAGE, NON-HAZARDOUS

The General Services Administration has authorized the use of this commercial item description for shipments of non-Department of Transportation regulated liquids in a polymer bottle.

1. ABSTRACT

This commercial item description applies to high and low density polyethylene (HDPE/LDPE), polypropylene (PP), or other polymers which meet the requirements outlined in this commercial item description. The intended liquid or solid contents must be compatible with the bottle's material. These bottles are not intended to be used for transport of Department of Transportation regulated materials.

2. CLASSIFICATION

This description covers bottles to be as follows:

Style A: Round

Style B: Square

Style C: Rectangle

Style D: Oval

Class 1: Narrow Mouth

Class 2: Large Mouth

Beneficial comments (recommendations, additions, deletions, clarifications, etc.) and any data which may improve this document should be sent to: Air Force Packaging Evaluation Activity, HQ AFMC/LGTP, 5215 Thurlow Street, Wright-Patterson AFB, OH 45433-5540.

AMSC N/A **FSC** 8125

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

Color a: Amber

Color b: Clear (including uncolored HDPE)

3.1 Bottles and caps.

3.1.1 Materials. The bottles and caps shall be made from clean recycled or virgin polymer material. Recycled material shall be preferred, when all salient characteristics are satisfied. The bottles shall be inherently leakproof and of commercial quality. The bottles shall exhibit the mold stamped or engraved recycling code outlined in PBI-24. The bottles shall exhibit a molded or stamped manufacturer's identification markings, either the entire name or an industry recognized code. The bottle and cap manufacturer or distributor shall notify the end user of all chemical families which create compatibility problems with the material used. The liner, if used, must be made of an inert material. Bottles, caps and liners, if required, all shall meet the applicable requirements in CFR 21 Parts 1-1299, especially the Food, Drug and Cosmetic Act and amendments, for carrying human consumable products.

3.1.2 Construction. Bottles shall be one piece, seamless construction and leakproof. Pinch-off welds are not to be construed as seams. Bottles greater than 3.8 liters shall exhibit either a handle or hand grip as an integral part of the bottle. Bottle shall achieve leakproofness with the cap using hand tightening procedures only.

3.2 Liner. If a cap liner is required for leakproofness, the liner must be made of inert material. The manufacturer shall notify the buyer about any compound families which may create liner compatibility problems. This notification shall be received upon receipt of the bottles by the buyer.

3.3 Capacities. Bottles shall have the following nominal capacities:

0.5 liters	(1 pint)	5 liters	(1.3 gallons)
1 liters	(1.08 quart)	8 liters	(2.1 gallons)
2 liters	(2.1 quarts)	10 liters	(2.6 gallons)
2.2 liters	(2.3 quarts)	25 liters	(6.6 gallons)
4 liters	(1.05 gallons)	50 liters	(13.2 gallons)
4.3 litres	(1.125 gallons)		

3.4 Threads. Threads on the neck of the bottle with the cap shall be of the buttress or semi-buttress type allowing at least one revolution before seating of the cap against the bottle. When the cap is completely screwed onto the bottle, the rim of the bottle shall seat firmly against theinner bearing surface of the cap or against the liner to ensure sealing.

Check the source to verify that this is the current version before use.

3.5 Workmanship. The bottles shall be smooth, and the surface shall be free from ridges and pinch-off flash, flow marks, or depressions on mold partition line crevices. The bottles shall be uniform in color, texture, finish, and physical properties. The bottles shall also be free from bubbles, pinholes, dirt, foreign matter, warpage, chipped edges, blisters, scratches, and other defects affecting their serviceability or appearance.

4. REGULATORY REQUIREMENTS

In addition to the Food, Drug and Cosmetic Act and the code in CFR 21 listed above, the contractor/offeror is encouraged to use recovered materials in accordance with Public Law 94-580 to the maximum extent possible.

5. QUALITY ASSURANCE PROVISIONS

5.1 Contractor Certification. The contractor shall certify and maintain substantiating evidence that the product offered meets the salient characteristics of this Commercial Item Description, and that the product conforms to the producer's own drawings, specifications, standards, and quality assurance practices. The government reserves the right to require proof of such conformance prior to first delivery and thereafter as may be otherwise provided for under the provisions of the contract.

5.2 Market Acceptability. A bidder, a manufacturer of the item, shall produce documentation proving they produced 10,000 units of the size and type ordered each of the past three years. A non-manufacturing bidder shall prove that they sold 10,000 units from the specific manufacturer used to fill the order, each of the past three years. Documentation shall be presented that the ordered quantity shall be received by the buyer within ninety days.

5.3 Testing and inspection requirements. A minimum ten samples shall be taken at random from the lot and inspected, for the defects listed below, when the lot size is less than 1,000 units. Above 1,000 units the samples taken at random shall be tested at 1% of lot size. If more than 1% of the test lot exhibit failures, the test shall be repeated using all new samples with no additional failures prior to acceptance of the lot.

5.3.1 Bottles and caps made from an unauthorized polymer material.
5.3.2 Bottles not marked with the appropriate recycling code.
5.3.3 Incompatibility documentation not included.
5.3.4 Bottles do not have a manufacturer's name or an industry recognized code identifying the manufacturer.
5.3.5 Bottle not one piece.
5.3.6 Bottle over 3.8 liters with no handle or hand grips.
5.3.7 Bottle not leakproof by hand tightening.
5.3.8 Liner not included, if required.

Check the source to verify that this is the current version before use.

5.3.9 Liner not an integral unit.
5.3.10 Liner not made from inert material.
5.3.11 Threads not the buttress or semi-buttress type.
5.3.12 Threads seal before one complete rotation.
5.3.13 Bottle with cap sealed not leak proof.
5.3.14 Bottle not in accordance with the workmanship paragraph (see 3.5).

6. PACKAGING

Packaging, Packing, and Marking. Packaging, packing and marking should be standard industry practice, ASTM D 3951, unless otherwise required in ordering information. The bottles received shall have their respective caps attached or equivalent number of caps and bottles in a shipment. The caps shall be protected from breakage, loss or deformation. However, the minimum box marking required shall include: the name of manufacturer or distributor, contract number, quantity, bottle size and bottle material.

7. NOTES

7.1 Acquisition requirements. Acquisition documents must specify the following:

A. Bottle characteristics (Style, Class and Color).
B. Quantity required.
C. Contractor documentation required in paragraphs 5.1, 5.2 and 5.3, as required.
D. Additional packaging, packing and marking requirements, if any.

7.2 Part Number. The following part identification numbering procedure is for government purposes and does not constitute a requirement for the contractor. The part number shall be determined as follows:

```
A -  XXXX - SQ - L - c
:      :    :    :   ` Color a - Amber
:      :    :    :           c - Clear
:      :    :    ` Class N - Narrow mouth
:      :    :              L - Large mouth
:      :    ` Style RO - Round
:      :              SQ - Square
:      :              RE - Rectangle
:      :              OV- Oval
:      ` CID Number
` Designates a CID
```
