JAN–P–381

AMENDMENT–1

31 July 1952

JOINT ARMY-NAVY SPECIFICATION

POWDER, PROPELLENT, 4.2-INCH CHEMICAL MORTAR

Army Number
50–12–16C

Navy Number
4P13

This amendment forms a part of Joint Army-Navy Specification JAN–P–381, 22 August 1946, and was approved by the Departments of the Army, the Navy, and the Air Force for use of procurement services of the respective Departments.

Page 1, specification title: Delete and substitute:

"POWDER, PROPELLENT, M8 (For 4.2-Inch Mortars, M2 and M30)."

Page 1, section A, title: Delete and substitute:

"APPLICABLE SPECIFICATIONS, STANDARDS, DRAWINGS, AND PUBLICATIONS."

Pages 1 and 2, paragraphs A–1 through A–3: Delete and substitute:

"A–1. The following specifications, standard, and drawings, of the issue in effect on date of invitation for bids, form a part of this specification:

SPECIFICATIONS

FEDERAL

V–T–276 —Thread, Cotton.
V–T–301 —Thread, Silk.
DDD–S–751 —Stitches, Seams, and Stitching.

MILITARY

JAN–P–156 —Potassium Nitrate.
JAN–D–242 —Diethylphthalate (For Use in Explosives).
JAN–N–244 —Nitrocellulose (For Use in Explosives).
JAN–N–246 —Nitroglycerin.
JAN–E–255 —Ethyl Centralite (Carbamite).
MIL–G–2550—General Specification for Ammunition Except Small Arms Ammunition.[1]

U. S. ARMY

96–81–190—Charge, Propelling, 4.2-Inch Mortar, M6.

NAVY DEPARTMENT

General Specification for Inspection of Material.[2]

[1] Applicable only to Army purchases.
[2] Applicable only to Navy purchases.

STANDARDS

MILITARY

MIL–STD–129—Marking of Shipments.

DRAWINGS

ORDNANCE CORPS

CP 24114—Heat Test.[3]

71–12–27—Charge, Propelling, M6, Assembly and Details.[3]

(Copies of specifications, standards, and drawings required by contractors in connection with specific procurement functions should be obtained from the procuring agency or as directed by the contracting officer)."

"A–2. *Other publications.*—The following publication, of the issue in effect on date of invitation for bids, unless otherwise stated, forms a part of this specification:

INTERSTATE COMMERCE COMMISSION REGULATIONS

Regulations for Transportation of Explosives and Other Dangerous Articles, etc.

(Information as to availability of these regulations may be obtained from the Interstate Commerce Commission, Washington 25, D. C.)"

Pages 1 and 2: Delete the footnotes.

Page 2, paragraph C–1, line 2: Delete "chemical."

Page 2, paragraph C–1, lines 15 and 16: Delete "Threads, linen—Federal Specification V–T–291, type B, lock-stitch twist, 3-ply, left-hand twist thread."

Page 3, paragraph C–2b, line 1: Delete "linen."

Page 3, paragraph D–7: Delete and substitute:

"D–7. *Approximate sheet dimensions.*—The finished powder sheets shall have approximately the following average dimensions (see Drawing 71–12–27):

Length of sides	2.7 inches.
Thickness	0.026 inch.
Diameter of central perforation	1.35 inches."

Page 3, paragraph D–9a, line 3: Delete "820 ft./sec." and substitute "820±8 ft./sec."

Page 4, paragraph F–3a, lines 1 and 2: Delete "U. S. Army Specification 50–0–1" and substitute "Specification MIL–G–2550."

Page 4: Add paragraph F–3b (1) as follows:

"F–3b (1) *Inspection procedures.*—For Navy purchases the general inspection procedures shall be in accordance with General Specifications for Inspection of Material."

[3] Applicable only to Army purchases.

Page 7, paragraph F–4a (1) b (1) d: Delete and substitute:

"F–4a (1) b (1) d.—*Glacial acetic acid.*—Run a blank determination on each lot of glacial acetic acid, in order to correct for errors from this source."

Page 7, paragraph F–4a (1) b (1) g, line 5: Delete "carbon tetrachloride" and substitute "glacial acetic acid."

Page 8, paragraph F–4a (1) b (2): Delete and substitute:

"F–4a (1) b (2) *Procedure.*—Dissolve one of the dried residues obtained in the ether extraction (see F–4a (1)), in 10 to 15 ml. of glacial acetic acid, and transfer the solution to the iodine titration flask. Rinse the extraction flask with five 10-ml. portions of glacial acetic acid, and add the rinsings to the iodine titration flask. Add 25 ml. of the $KBrO_3$–KBr solution measured from a burette or from an accurate pipette. Moisten the flask stopper with a drop of potassium iodide solution, add 10 ml. of 1-to-1 hydrochloric acid solution, quickly stopper the flask, and shake the flask contents thoroughly for 1 minute. Immediately after shaking add the potassium iodide and titrate the liberated iodine with sodium thiosulfate solution following the procedure specified in F–4a (1) b (1) g. The determination must be completed without delay, not allowing the mixture to stand after the initial shaking period nor after the addition of the potassium iodide. Calculate the percentage of ethyl centralite as follows:

$$\text{Percent ethyl centralite} = \frac{6.70\ (V-v)\ N}{W}$$

where

V=ml. sodium thiosulfate solution used in the titration of the sample.

v=ml. sodium thiosulfate solution used in the blank titration (see F–4a (1) b (1) g).

N=normality of the sodium thiosulfate solution (see F–4a (1) b (1) g).

W=weight of volatiles-free sample. grains.

(Note: To insure complete bromination of the ethyl centralite at least a 100-percent excess of $KBrO_3$–KBr solution should be present; that is, the excess should be equal to or greater than "V–v" in the above formula)."

Page 11, paragraph F–4g (1), line 2: Delete "chemical" between "4.2-inch" and "mortar."

Page 11, paragraph F–4g (1), line 3: Delete "Mk. I type I, class A" and substitute "M2."

Page 12, paragraphs G–2: Delete and substitute:

"G–2. *Marking.*—Each shipping container shall be marked in accordance with Standard MIL–STD–129. In addition the mark-
