DATA ITEM DESCRIPTION

Title: Part Configuration Analysis Report

Number: DI-SESS-81721
AMSC Number: 7675
DTIC Applicable: No
Office of Primary Responsibility: NS/I5231
Applicable Forms: None

Approval Date: 29 NOV 2006
Limitation: N/A
GIDEP Applicable: No

Use/Relationship:

The purpose of this analysis is to evaluate and determine the inherent reliability designed into each part used in a high reliability program.

The report shall separately cover each electrical part type and number. Parts that are from the same vendor and are identically constructed may be combined under one report. Only one report is required per part number but any change in construction of a part will require an update of the configuration analysis for that part.

This Data Item Description (DID) contains the format and content preparation instructions for the data product generated by the specific and discrete task requirement as delineated in the contract and NSA Standard Number 77-46, "Configuration Analysis" (entire document).

Requirements:

1. Reference Documents: The applicable issue of the documents cited herein, including their approval dates and dates of any applicable amendments, notices, and revisions, shall be as stated herein. NSA Standard Number 77-46, "Configuration Analysis," current edition, is available at NSA/I5224, Information Management Services, 9800 Savage Rd, Suite 6718, Fort Meade, Md. 20755-6718.

2. Format: The report shall be in the contractor's format.

3. Content: The Part Configuration Analysis Report shall contain the following information:

3.1. Title page. The report shall contain a title page for each electrical part type and number, and the following information.

a. Report title, including equipment designator in capital letters
b. Part numbers covered by the report
c. Date code of the part dissected
d. Name of author and official title
e. Date report was prepared

Check the source to verify that this is the current version before use.

f. Activity preparing the report
g. Contract number
h. Approval official name, signature and title
i. Appropriate security classification

3.2. Photographs: The following photographs shall be included in the report.

a. Device as received
b. Cross section of device

3.3. Device cut-a-way sketch and itemized table of materials: The sketch shall be labeled to illustrate where the materials from the table are located on the sketch.

3.4. Manufacturer's process flow: The report shall include a block diagram of the manufacturer's process flow.

4. END OF DI-SESS-81721
