REQUIREMENTS:

Dimensions and configuration: See figure 1 and table I.

High temperature setting: -30°F to +350°F (see tables II and III).

High temperature setting tolerance: ±8°F.

Low temperature setting (differential): 30°F ±8°F below applicable high temperature setting.

Class: 4, except vibration 10 to 2,000 Hz, 30 G.

Notes:

1. Devices with open on temperature rise should not be subjected to vibration while at temperatures of 75°F or more below the opening temperature.
2. Devices with close on temperature rise should not be subjected to vibration while at temperatures of 75°F or more above the opening temperature.

Mounting: See figure 1.

Weight: 0.3 gram maximum.

Dielectric withstanding voltage:

Sea level - 500 V ac for 5 seconds or 400 V ac for 1 minute.

70,000 feet - 250 V ac.

Electrical ratings:

1.0 ampere resistive at 115 V ac, 60 Hz.

1.0 ampere resistive at 28 V dc.

10 milliamperes resistive at 30 millivolts dc or 30 millivolts peak ac (when specified, see PIN information).

Endurance: 10,000 cycles.

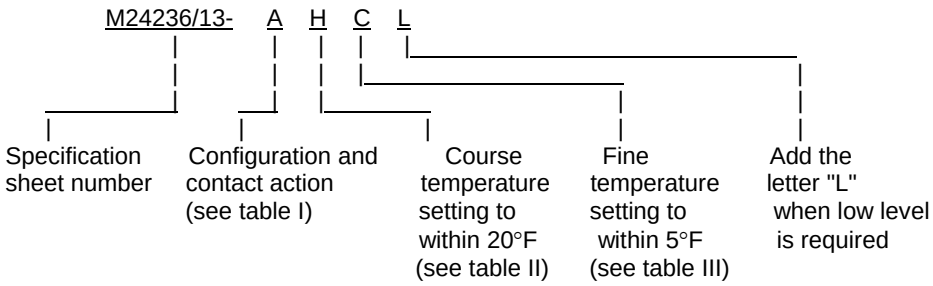

Salt spray (corrosion): In accordance with MIL-PRF-24236, except switches shall be subjected to and pass the seal test after undergoing salt spray. NOTE: Destructive corrosion shall be construed as any type of corrosion which in any way interferes with the mechanical or electrical performance of the switch, or corrosion which causes seal failure.

Marking: Identification marking shall be placed on the unit package label or tag.

Low level: When specified, see PIN information.

Check the source to verify that this is the current version before use.

Part or Identifying Number (PIN): PIN shall be assigned as illustrated below:

PIN M24236/13-AHCL identifies a thermostatic switch that opens on increasing temperature at 120°F ±8°F with a temperature differential of 30°F ±8°F with low level capabilities.

Qualification:

Group submission: See table IV.

Substitutability: See table V.
