MIL-C-29381C
10 SEPTEMBER 1990
SUPERSEDING
MIL-C-29381B(MC)
29 December 1988

MILITARY SPECIFICATION

COAT, ALL-WEATHER, WOMEN'S

This specification is approved for use by U. S. Marine Corps, Department of the Navy, and is available for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This specification covers the requirement for a woman's all-weather coat.

1.2 Classification. The all-weather coats shall be one type in the following classes and sizes, as specified (see 6.2).

Class.

Class 1 - Marine Corps Pewter 2246
Class 2 - Marine Corps Blue 2324
Class 3 - Army Black 385

Sizes.

Short (S)	Regular (R)	Long (L)
4	4	4
6	6	6
8	8	8
10	10	10
12	12	12
14	14	14
16	16	16
18	18	18
20	20	20
	22	22

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to the Commanding General (PSE-C), Marine Corps Research, Development and Acquisition Command, Washington, D. C. 20380-0001, by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

AMSC-N/A FSC 8410

Distribution Statement A. Approved for public release; distribution is unlimited.

MIL-STD-147 - Palletized Unit Loads
MIL-STD-731 - Quality of Wood Members for Containers and Pallets
MIL-STD-1494 - Provisions for Evaluating Quality of Raincoat

(Unless otherwise indicated, copies of federal and military specifications, standards, and handbooks are available from the Standardization Documents Order Desk, Building 4D, 700 Robbins Avenue, Philadelphia, PA 19111-5094.)

2.1.2 Other Government documents and publications. The following government document forms a part of this specification to the extent specified herein. Unless otherwise specified, the issues are those cited in the solicitation.

Department of Defense Standard Color Card for Sewing Threads
Department of Defense (DOD) Standard Shades for Buttons 1966

Quartermaster Standard Shade of Slide Fastener Tape

(Copies may be obtained from the Color Association of the United States, Inc., 323 Lexington Avenue, New York, New York 10016.)

2.2 Non-Government publications. The following document(s) form a part of this document to the extent specified herein. Unless otherwise specified, the issues of the documents which are DoD adopted are those listed in the issue of the DODISS cited in the solicitation. Unless otherwise specified, the issues of documents not listed in the DODISS are the issues of the documents cited in the solicitation (see 6.2).

American Society for Testing and Materials (ASTM)
D-3951 Standard Practices for Commercial Packaging

(Application for copies should be addressed to the American Society for Testing and Materials, 1916 Race Street, Philadelphia, PA 19103-1187.)

(Non-Government standards and other publications are normally available from the organizations that prepare or distribute the documents. These documents also may be available in or through libraries or other informational services.)

2.3 Order of precedence. In the event of a conflict between the text of this specification and the references cited herein. The text of this specification shall take precedence. Nothing in this specification, however, shall supersede applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 Standard sample. Standard samples are furnished solely for guidance and information to the contractor (see 6.3). Variation from this specification may appear in the sample, in which case the specification shall govern.

3.2 First article. When specified in the contract or purchase order, a sample shall be subjected to first article inspection and approval (see 4.4 and 6.3).

3.3 Materials.

Source: https://assist.dla.mil -- Downloaded: 2026-10-20T22:41Z
Check the source to verify that this is the current version before use.

3.3.1 Basic fabric. The fabric shall be 65 percent polyester/35 percent cotton poplin cloth, with a durable water repellent finish conforming to MIL-C-29363.

3.3.2 Shell Lining. The material for the body lining, sleeve lining and for binding the back edge of the facing and the liner shall be nylon taffeta cloth, 1.9 ounce, conforming to type IV of MIL-C-21852. The color for class 1 shall be Marine Corps pewter shade to approximate the basic fabric shade. The color for classes 2 and 3 coats shall be black.

3.3.3 Coat Liner. The material for the liner shall be rayon face and rayon or cotton back satin cloth conforming to type II of MIL-C-43525. The color for class 1 shall be Marine Corps pewter shade to approximate the basic fabric shade. The color for the classes 2 and 3 shall be black.

3.3.4 Material for hanger loop. The hanger loop shall be made of the basic fabric specified in 3.3.1 or shall be cotton or rayon braid that conforms to type IX, class 1, of MIL-B-371. Color shall match shade of basic fabric.

3.3.5 Interlining. The interlining for the front, side front, front facing, front flap, topcollar, collar stand, pocket welts, shoulder straps, sleeve straps, sleeve turnup, and belt and for class 3 only, the front flap (upper) shall be non-woven fusible cloth 85% polyester, 15% polyamide or 100% polyester, 1.75 to 2.0 ounces per square yard, polyamide dot. The color shall be charcoal for class 1 and charcoal or black for classes 2 and 3. The fusible cloth shall be Pellon Style 8335 or 8416 or Handler Textiles 71915 or equal to or better.

3.3.6 Slide fastener. The slide fastener for the liner shall conform to type IV, style 1, size L, short tab pull, aluminum chain of V-F-106. The length of the slide fastener shall conform to the below listing. The tape shall be cotton warp and nylon filling, 7/16 to 3/4 inches wide. All the components of the slide fastener shall be aluminum and from the same supplier. As an alternate, 100 percent texturized polyester tape in the slide fastener conforming to V-F-106 may be used.

LENGTH OF SLIDE FASTENERS

Size of Coat	Length in Inches		
	Short	Regular	Long
4	70	74	77
6	70	74	77
8	70	74	77
10	70	74	77
12	70	74	77
14	70	74	77
16	74	77	80
18	74	77	80
20	74	77	80
22		77	80

3.3.7 Color and colorfastness. The slide fastener tape shall be shade AH, cable No. 66533 sage green for class 1 and black shade G, Cable No. 66507 for classes 2 and 3 coats. The tape shall show colorfastness to wet dry cleaning equal to or better than the standard sample (see 6.3). If a standard sample is not furnished, the slide fastener tape shall have good colorfastness to wet-dry cleaning. (See Quartermaster Standard Shades of Slide Fastener Tapes.)

Source: https://assist.dla.mil -- Downloaded: 2026-10-20T22:41Z
Check the source to verify that this is the current version before use.

3.3.8 Buckles. The plastic buckle for the belt shall be a 2-1/4-inch general purpose buckle conforming to class 2 of MIL-B-1860. The color shall be green AF Cable No. 62017 for class 1, blue BV Cable No. 62002 for class 2 and shade black CT62001 for class 3. (See DOD Standard Shades for Buttons 1966).

3.3.9 Buttons. The buttons shall conform to type II, class D of V-B-871 in the following styles and sizes:

	Style	Size
Front, inside anchor and extra	20 or 21	34
Sleeve, shoulder strap, sleeve liner belt and extra	20 or 21	24
Stay	15	18

The buttons shall have a glossy finish and shall be green shade AF Cable No. 62017 for class 1, blue BV Cable No. 62002 for class 2 and black shade CT62001 for class 3. (See DOD Standard Shades for Buttons 1966).

3.3.10 Thread.

3.3.10.1 Polyester/cotton covered. The thread shall be dyed shade taupe A, Cable No. 66030 for class 1, shade blue AB, Cable No. 66044 for class 2, and shade black AA Cable No. 66043 for class 3 and shall conform to A-A-50199 as follows:

USE	Ticket No.	Ply
Seaming, stitching, buttonholes, buttons and bartacks	50 or 70	2 or 3
Buttons sewing	30	2 or 3

The thread shall be water repellant treated in accordance with type II, class 3 of MIL-T-3530.

3.3.10.2 Cotton. The cotton thread shall conform to V-T-276, type IC2, mercerized finish, Ticket No. A, 3 ply for all seaming, stitching and overedge stitching on the removable liner and for stitching the binding on the front and neck facing of the coat. The color of the thread shall be taupe A, Cable No. 66030 for class 1, blue shade AB, Cable No. 66044 for class 2 and shade black AA, Cable No. 66043 for class 3. The polyester/cotton thread may be used as an alternate.

3.3.10.3 Colorfastness. The dyed thread shall show fastness to wet-dry cleaning and light equal to or better than the standard sample when tested as specified in V-T-276 or A-A-50199. When no standard sample is available, the dyed thread shall show "good" fastness to wet-dry cleaning and light when tested as specified in V-T-276 or A-A-50199.

3.3.11 Gimp. The cotton gimp for reinforcing the buttonholes shall be dyed shade taupe A, Cable No. 66030 for Class 1, shade blue AB, Cable No. 66044 for Class 2 and shade black AA, Cable No. 66043 for class and shall conform to type I or II, size 8 of A-A-50198.

Source: https://assist.dla.mil -- Downloaded: 20261O-20T22:41Z
Check the source to verify that this is the current version before use.

3.3.11.1 Colorfastness. The dyed gimp shall show fastness to wet-dry cleaning equal to or better than the standard sample when tested as specified in A-A-50198. When no standard sample is available, the dyed gimp shall show "good" fastness to wet-dry cleaning when tested as specified in A-A-50198.

3.3.12 Labels.

3.3.12.1 Combination label. Each coat shall have a combination identification and instruction label conforming to type VI, Class 14 of DDD-L-20. The printing shall show fastness to dry cleaning and shall bear the following inscription:

NOMENCLATURE: COAT, WOMAN'S ALL WEATHER
FIBER CONTENT: Polyester (65%), Cotton (35%)
CONTRACT NO: DLA-100-00-0-0000 (Example)
STOCK NO: 8405-00-000-0000 (Example)
NAME OF CONTRACTOR:

CLEANING INSTRUCTIONS

DRY CLEAN ONLY

3.3.12.2 Size label. Each coat and liner shall have a separate size label conforming to type VI, Class 2 of DDD-L-20 and shall bear the following inscription:

Size: 36R (Example)

The length (Short, Regular and Long) may be abbreviated as follows: S, R and L.

3.4 Design. The class 1 and 2 coats shall be the U.S. Marine Corps design shown on Figures 1 through 6 and the class 3 coat shall be the U.S. Army design shown on figures 7 and 8. The coats have a double breasted front model with belt and buckle, convertible collar, shoulder straps, sleeve straps, hanging pockets, a closed pleated back vent, and zip out liner and shall be water repellant finished. The coats shall also have a two-piece front, two-piece back and two-piece split sleeves. The class 3 coats only shall have a upper front flap (gunpatch), half cape back and extra buttons sewn on the inside facing.

3.5 Patterns. Standard patterns will be furnished to the contractor by the Government. The standard patterns shall not be altered in any way and shall be used only as a guide for cutting the contractor's working patterns. The contractor's working patterns shall be identical to the standard patterns except the standard patterns shall provide 1/4-inch allowance for seams at the edge of shoulder strap, collar, sleeve straps, belt, and facing to front; 3/8-inch allowance for sleeves, sleeve linings, setting sleeves, shoulder seams, collar stand to neck and center front to side front; 5/8-inch allowance for side; 3/8-inch allowance for all seams in the liner, except as otherwise specified in Table I. Additional notches for use during construction are permitted on the working patterns. Also, minor modifications are permitted where necessary when using automatic equipment. These modifications shall not alter the dimensional serviceability or appearance requirements cited in this specification. Standard patterns show size, seam allowances, directional lines for cutting, and are marked or notched for proper placement and assembly of the component parts.

3.6 Construction. The coat shall be manufactured in accordance with the operations and the stitch, seam, and stitching types specified in Table I. The manufacturer will not be required to follow the exact sequence of operations as listed. The thread and the fabric shall not be lubricated by any means prior to or during the seaming. The stitch, seam, and stitching type specified in Table I shall conform to FED-STD-751. The number of stitches per inch as specified in Table I indicates the minimum and maximum number permitted. If two or more methods or seam or stitch types are given for the same part of an operation, any one of them may be used. Where stitch type 401 is used, the looper (under thread) shall be on the inside of the outer shell of the coat and on the side of the liner that will face the outer shell in the finished coat. Seams shall be sewn so that no raw edges, run offs, twists, pleats, puckers, or open seams will result. All seams shall start and finish evenly. Thread tension shall be maintained so that the stitching will not be tight or loose. Unless otherwise specified herein, raise stitching or edge stitching shall be 1/16 inch from the edge and 1/4 inch gage. The stitching for safety stitch construction shall be 3/8-inch gage. The guides and knives on the safety switch machine shall be set to trim only the ravelled ends of the fabric. Seams required to be worked out having a depth between the fold of 1/16 inch or more shall not be acceptable. The ends of all seams and stitchings not caught by other seams and stitching shall be backtacked not less than 1/2 inch. Thread breaks of stitch Type 301 shall be secured by stitching back of the break not less than 1/2 inch. Thread breaks or skipped stitches in stitch Type 401 shall be backstitched not less than 1 inch with the stitching superimposed and anchoring the ends of the break when automatic equipment is authorized for use. When automatic equipment is authorized for use, minor modifications are permitted where necessary. These modifications shall not alter the dimensional, serviceability or appearance requirements cited in this specification.

3.6.1 Shade marking. The component parts of the coat cut from one piece of basic material and lining material shall be shade marked to insure a uniform shade and size throughout the garment. Any method of shade marking may be used except:

a. Corrosive metal fastening devices.
b. Adhesive type tickets which show discoloration or the use of an adhesive mass which adheres to the material upon removal of the tickets.

3.6.2 Fusing operations. The fusing operation for fusing the fusible interlining specified in 3.3.5 to the basic fabric of the outer shell specified in 3.3.1 should be performed on a fusing press. Specific settings (see 6.7) for the particular fusible style and press to be used should be obtained from the supplier of the fusible material so that the optimum results can be obtained.

TABLE I MANUFACTURING REQUIREMENTS

NO	OPERATION	STCH TYPE	SEAM/ STCH TYPE	STCH/ IN	NDL	BOB/ LPR
1.	Cutting. a. Cut the coat in strict accordance with patterns furnished by the Government. b. Cut all materials in the direction indicated by the pattern. The pattern has markings for placement of pockets, buttonhole sizes, seam allowance and notches for proper assembly of all parts. Unless otherwise specified, place the directional lines of the patterns in the warp direction of the material. c. Unless otherwise specified herein, cut all parts that are made of the basic fabric specified in 3.3.1 from the same material. The undercollar, the underside of the shoulder straps, and the undercollar stand, may be cut from ends. The part cut from ends shall approximate the shade of the outer shell. d. Cut the stripping 2 inches wide for the hanger, belt loops, belt keeper and belt fastener in the direction of the warp. The finished width of the stripping shall be 1/2 ± 1/16 inch wide. e. Cut the parts of the liner that are made of fabric specified in 3.3.3 from the same piece of material in accordance with the directional lines of the pattern. f. Cut all interlining parts in accordance with the pattern.

Check the source to verify that this is the current version before use.

TABLE I MANUFACTURING REQUIREMENTS

NO	OPERATION	STCH TYPE	SEAM/ STCH TYPE	STCH/ IN	NDL	BOB/ LPR
1.	Cutting. (cont'd) g. Cut the binding for both the outer shell and the liner on the bias 1 1/8 inches wide. h. Cut sleeve and body lining in accordance with pattern. When cut from ends, the shade of each pair shall match. i. The use of drill holes for marking pockets and darts shall be permitted provided extreme care is taken in placement of drill holes and that no drill holes are visible on the outside finished item. Visible drill holes will be a major defect.					
2.	Replacement of damaged parts. a. Remove any parts containing material defects or workmanship damages that are classified as defects in MIL-STD-1494 from production during the spreading, cutting, and manufacturing process and replace with nondefective and properly matched parts. b. Replace at time of cutting any parts of coat containing holes or serious weakening defects such as smashes, multiple floats, loose or weakening slubs, etc., expected to develop into holes, shade bars and dye streaks or unsightly slubs, etc., affecting appearance. c. Replace any parts damaged during the manufacturing process by needle chews which may develop into a hole, scissor knife cuts, tears, holes, mends or burns in the material affecting appearance.

TABLE I MANUFACTURING REQUIREMENTS

NO	OPERATION	STCH TYPE	SEAM/ STCH TYPE	STCH/ IN	NDL	BOB/ LPR
3.	Shade marking.					
	a. Mark or ticket (see 3.6.1) all component parts to insure a uniform shade throughout the coat and the proper assembling of all parts.					
	b. If shade marking is used, the marking shall not show through and be visible on the outside of the coat.					
	c. The use of tickets with any metal fastening devices or sew-on shade tickets is prohibited.					
4.	Make shoulder straps.					
	a. Position the shoulder strap interlining on the top ply of each shoulder strap and fuse (see 3.6.2).					
	b. Join the top ply of each shoulder strap (with interlining) to the underply of the shoulder strap along the sides and across the point. Trim the corners, and turn seam to the edges. Stitch each shoulder strap with double stitch seam 1/16 inch from the edge and 1/4 inch from gage.	301 or 401 and 301	SSe-3 (a) SSe-3 (a) SSe-3 (b)	10-12 10-12 10-12	50 50 50	50 70 50
	c. Make a 5/8-inch square-bar, eyelet-end type buttonhole in each shoulder strap, positioned midway, with the inside edge of the eyelet 5/8 to 3/4 inch from the pointed end. The buttonhole shall not be off centered by more than 1/8 inch.	Buttonhole		50-54 per buttonhole including bartack	70	70
5.	Make sleeve strap.					
	a. Position the sleeve strap interlining on each ply of sleeve strap and fuse (see 3.6.2).

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection requirements (examinations and tests) as specified herein. Except as otherwise specified in the contract or purchase order, the contractor may use his own or any other facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the government. The government reserves the right to perform any of the inspections set forth in the specification where such inspections are deemed necessary to assure supplies and services conform to prescribed requirements.

4.1.1 Responsibility for compliance. All items must meet all requirements of sections 3 and 5. The inspection set forth in this specification shall become a part of the contractor's overall inspection system or quality program. The absence of any inspection requirements in the specification shall not relieve the contractor of the responsibility of assuring that all products or supplies submitted to the Government for acceptance comply with all requirements of the contract. Sampling inspection, as part of manufacturing operations, is an acceptable practice to ascertain conformance to requirements, however, this does not authorize submission of known defective material, either indicated or actual, nor does it commit the Government to acceptance of defective material.

4.1.2 Certification of compliance. Where certificates of compliance are permitted, the Government reserves the right to check test such items to determine the validity of the certification.

4.1.3 Responsibility for dimensional requirements. Unless otherwise specified in the contract or purchase order, the contractor is responsible for ensuring that all specified dimensions have been met. When dimensions cannot be examined on the end item, inspection shall be made at any point, or at all points in the manufacturing process necessary to ensure compliance wwith all dimensional requirements.

4.2 Classification of inspection. The inspection requirements specified herein are classified as follows:

a. First article inspection (see 4.4).

b. Quality conformance inspection (see 4.5).

4.3 Inspection conditions. Unless otherwise specified all inspections shall be in accordance with the test conditions specified in MIL-STD-1494.

4.4 First article inspections. When a first article is required (see 3.2 and 6.2), it shall be examined for the defects specified in MIL-STD-1494.

4.5 Quality conformance inspection. Unless otherwise specified, sampling for inspection shall be performed in accordance with MIL-STD-105.

4.5.1 Component and material inspection. In accordance with 4.1, components and materials shall be inspected in accordance with all requirements of referenced specifications, drawings and standards unless otherwise excluded, amended, modified or qualified in this specification or applicable purchase document. The

Check the source to verify that this is the currentversion before use.

method of testing shall be as specified in FED-STD-191, wherever applicable. All test reports shall contain the individual values used in expressing the final result. The lot shall be unacceptable if one or more sample units fail to meet any of the test requirements specified. The lot size and sample size shall be in accordance with the following:

Lot size (lot unit)	Sample size (sample unit)
800 or less	2
801 to 22,000 inclusive	3
22,001 and over	5

4.5.2 In-process inspection. Inspection shall be performed during the manufacturing of the end item to ascertain that the operations are performed as specified herein. The Government reserves the right to determine the acceptability of construction methods not performed in accordance with specified requirements for operations for subassemblies.

4.5.2.1 Bond strength of fusible interlining and tape. The strength of the bond of the fusible interlining and tape to the outer shell shall be tested once each 4 hours as follows at each fusing press to determine that adequate fusing is being obtained. Prepare a test sample by fusing the fusible interlining specified in 3.3.6 to the basic fabric of the outer shell specified in 3.3.1 under the same fusing conditions to be used in the manufacture of the coat. Determine the bond strength of the test sample with a commercial spring scale (see 6.8). If the bond strength of any test sample is less than 22 ounces per inch of width, the fusing conditions shall be corrected and the bond strength test shall be repeated. Those units represented by this test shall be fused again and retested. If they fail, they shall be rejected.

4.5.3 End item visual examination. The end items shall be examined for visual defects in accordance with the provisions of MIL-STD-1494.

4.5.4 End item dimensional examination. The end items shall be examined for dimensional defects in accordance with the provisions of MIL-STD-1494.

4.5.5 Sampling test. Samples of the end item shall be subjected to the sampling tests listed below. If one or more sample units fail to meet any test requirements listed below, the lot represented shall not be accepted.

Sampling test	
Characteristics	Test Methods
End Item appearance	
Bubbling or delamination of fused area after five dry cleanings	Dry cleaning and visual 1/
Strike through of adhesive	Visual

1/ The complete coat shall be dry cleaned five times in a single unit, coin- operated cycle capable of providing a complete automatic dry to dry cycle, using perchlorethylene and then shall be visually examined for bubbling and delamination of the fused areas.

After the coat has been subjected to five dry cleanings, the coat shall not show any evidence of bubbling or delamination of the fused areas. The coat shall not have any "strike through" of the adhesive after fusing.

Check the source to verify that this is the current version before use.

4.5.6 Packaging examination. The fully packaged end items shall be examined in accordance with the provisions of MIL-STD-1494.

5. PACKAGING

5.1 Packaging. Packaging shall be level A or commercial as specified (see 6.2).

5.1.1 Level A. Each coat shall be buttoned and then folded to approximately 14 inches by 22 1/2 inches. Each folded coat shall be inserted in a close fitting flat style clear polyethylene bag conforming to A-A-50083. The bag shall be at least 1 inch longer than the folded coat. The unsealed opening of the bag shall be at the smaller dimension of the bag.

5.1.2 Commercial preservation. The coats shall be preserved in accordance with ASTM D 3951.

5.2 Packing. Packing shall be level A, B or commercial as specified (see 6.2)

5.2.1 Level A. Ten coats of one size and class only, packaged as specified, shall be packed in a fiberboard shipping container that is assembled, closed, and reinforced in accordance with grade v2s, size 3A of MIL-B-17757. The fiberboard for the liner shall conform to type CF, class weather-resistant, variety DW, grade V15c of MIL-B-17757. Level A packages shall be packed flat with every other coat reversed top to bottom within the shipping container. The top and the bottom of the contents of the shipping container shall be completely covered with a sheet of 30 pound (minimum) basis weight paper conforming to A-A-203. Shipping containers shall be arranged in unit loads in accordance with MIL-L-35078 for the type and class of load specified (see 6.2). Strapping shall be limited to nonmetallic strapping for type II, class F loads.

5.2.1.1 Level B. Ten coats of one size only, packaged as specified, shall be packed in a shipping container that is assembled and closed to conform to class domestic, variety DW, grade 275, size 3A of MIL-B-17757. The fiberboard for the liner shall conform to type CF, class domestic variety DW, grade 275 of PPP-F-320. Level A packages shall be packed flat, with every other coat reversed top to bottom within the shipping container. The top and the bottom of the contents of the shipping container shall be completely covered with a sheet of 30 pound (minimum) basis weight paper conforming to A-A-203. Shipping containers shall be arranged in unit loads in accordance with MIL-L-35078 for the type and class of load specified (see 6.2). Strapping shall be limited to nonmetallic strapping for type II, class F loads.

5.2.2 Optional shipping container. If specified by the procuring activity (see 6.2), a weather resistant shipping container shall be fabricated in accordance with grade V3c or V3s of MIL-B-17757 and classed in accordance with the appendix of the container specification. If specified by the procuring activity (see 6.2), the material for the shipping container shall conform to grade V4s of PPP-F-320.

5.2.3 Commercial packing. Coats, packaged as specified in 5.1, shall be packed in accordance with ASTM D 3951.

Check the source to verify that this is the current version before use.

5.2.4 Hanger pack. When specified (see 6.2), 10 coats of one class and size shall be placed on a 16 inch hanger and packed in a type I container (hanger pack) in accordance with MIL-C-44192, except the inside depth of the box shall be 48 inches (+0, -2 inches). The loaded containers shall be palletized and marked in accordance with MIL-C-44192.

5.3 Marking. In addition to any special marking required by the contract or purchase order, unit packs, shipping containers and palletized unit loads shall be marked in accordance with the requirements of MIL-STD-129 or ASTM D 3951, as applicable.

5.3.1 Polyethylene bags. Each polyethylene package (see 5.1.1) shall have the nomenclature, stock number and size of the item packaged therein legibly printed or stamped in black directly across the center face of the bag or on a white paper label inserted within the bag so that it is readable through the polyethylene.

5.4 Palletization. When specified (see 6.2), coats packed as specified in 5.2.1 and 5.2.2 shall be palletized on a 4-way entry pallet in accordance with load type 1A of MIL-STD-147. Pallet type shall be type I (4-way entry), type IV or type V in accordance with MIL-STD-147. Pallets shall be fabricated from wood groups I, II, III or IV of MIL-STD-731. Each prepared load shall be bonded primary and secondary straps in accordance with bonding means C and D or film bonding means F or G. Pallet pattern shall be in accordance with the appendix of MIL-STD-147. Interlocking of loads shall be effected by reversing the pattern of each course. If the container is of a size which does not conform to any of the patterns specified in MIL-STD-147, the pallet used shall be approved by the contracting officer.

6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

6.1 Intended use. The coat covered by this specification is intended to be worn by female personnel of the U.S. Marine Corps and the U.S. Army.

6.2 Acquisition requirements. Acquisition documents must specify the following:

a. Title, number, and date of this specification.
b. Size and class required (see 1.2).
c. Issue of DoDISS to be cited in the solicitation, and if required, the specific issue of individual documents referenced (see 2.1.1 and 2.2).
d. When a first article is required (see 3.2, 4.4 and 6.4).
e. Levels of packaging and packing (see 5.1 and 5.2).
f. Type and class of unit load required (see 5.2.1).
g. When weather-resistant grade fiberboard shipping containers are required for level B packing (see 5.2.2).
h. When palletization is required (see 5.4).

Check the source to verify that this is the current version before use.

6.3 First article. When a first article is required, it shall be inspected and approved under the appropriate provisions of FAR 52.209. The first article should be a preproduction sample. The contracting officer should specify the appropriate type of first article and the number of units to be furnished. The contracting officer should include specific instructions in all acquisition instruments regarding arrangements for selection, inspection, and approval of the first article.

6.4 Standard sample. The standard sample and color sample may be obtained from the acquiring activity or as directed by the contracting officer.

6.5 Subject term (keyword) listing.

Cover
Female
Repellant
Weather

6.6 Figures. Figures 1 through 8 show general design of the coat and are furnished for information purposes only. In the event of conflict between these figures and the text of this specification, the text of this specification shall govern.

6.7 Fusing conditions. Specific machine setting should be obtained from the supplier of the particular fusible material for optimum results. The following fusing conditions include the recommendations of several suppliers of fusible material and are furnished for guidance only.

6.7.1 Fusible interlining. (See 3.3.5)

(a) Temperature between pressing surfaces of 280°F minimum and 310°F maximum, at the fuseline (not the temperature at the clock).

(b) Pressure between pressing surfaces of four pounds force per square inch ($1b_f/in^2$) minimum and five $1b_f/in^2$ maximum.

(c) Pressing time of 10 seconds minimum and 12 seconds maximum.

(d) Heat-dry.

6.8 Peel strength test. The procedure for the peel strength testing with a spring scale should be obtained from the supplier of the fusible material, and shall be accomplished 2 hours after fusing.

6.9 Changes from previous issue. Asterisks are not used in this revision to identify changes with respect to the previous issue due to the extensiveness of the changes.
