DATA ITEM DESCRIPTION
Title: ENGINE CONTROL SYSTEM COMPONENT TEST REPORT REQUIREMENTS

Number: DI-NDTI-81897A
AMSC Number: 10673
DTIC Applicable: No
Preparing Activity: AV
Applicable Forms: N/A

Approval Date: 20260604
Limitation: N/A
GIDEP Applicable: No
Project Number: NDTI-2026-003

Use/relationship:

The Engine Control System Component Test Report Requirements describe the format and content of deliverable information from the environmental qualification testing of engine control system components. It provides clear and complete instructions for the preparation of qualification substantiation data products to be submitted for approval by the airworthiness authority, resulting from applicable tasks delineated in the solicitation.

a. This Data Item Description (DID) contains the format, content, and intended use information for the data deliverable resulting from the work task described in 5.10.4.1 of MIL-STD-3087.
b. This DID supersedes DI-NDTI-81897.

Requirements:

1. Reference Documents. The applicable issue of the documents cited herein, if any, including their approval dates and dates of any applicable amendments, notices, and revisions, shall be as specified in the contract.

2. Cover.
    a. Title, number, and date.
    b. Contractor's Name.
    c. Contract number.

3. Title Page.
    a. Title, number, and date.
    b. Contractor's Name.
    c. Name(s) of the author(s).
    d. Contract number.

4. Abstract.
    a. Objective of the report.
    b. Brief statement of the contents of the report.

Check the source to verify that this is the current version before use.

5. Table of Contents.

6. List of Tables. When used in a separate series, tables shall be given Roman numerals.

7. List of Illustrations.
    a. Figure numbers and captions of all illustrations.
    b. Photographs, charts, and graphs shall be treated as illustrations and given figure numbers.

8. Applicable Documents.

9. Introduction.

10. Component Description.
    a. System Description.
    b. Unit Construction and Assembly.
    c. Component Non-Conformances. Any non-conformances shall be described here, with reference to 17. Appendix A for the actual detailed documentation of such, including any corrective action taken. The report shall explain the rationale for testing a nonconforming part or reworked part. Airworthiness Authority approval of the non-conformances shall be included in Appendix A.

11. Test Plan.
    a. Test Plan Summary - Summarize the test plan in a table, including the order of testing, the name of the test, the test procedure, and the test plan paragraph number.
    b. Plan Approval - Specify when/how the Airworthiness Authority approval of the test plan was provided and include in 18. Appendix B the documentation of such.
    c. Deviation to the Test Plan (Global) - Explain any global deviations to the test plan that had to be made and reference Appendix B for the documentation of the deviations, along with Airworthiness Authority approval.

12. Test Readiness Review (TRR). Indicate if a TRR was held. Provide information on whom, when and where, and the outcome of the TRR.
    a. Include documentation of Airworthiness Authority approval to test.
    b. Include TRR materials in 19. Appendix C.

Check the source to verify that this is the current version before use.

13. Test Summary. Include a table similar to the one illustrated below*:

Test Name UUT S/N	Test Order	Test Plan # Paragraph	Date of Test	Result	Pre-Test ATP		Test Report #	Section #	Post-Test ATP	
					Date	Appendix			Date	Appendix
Test 1 Name Test 1 UUT S/N	1			Pass						
Test 2 Name Test 2 UUT S/N	2			Pass						
Test 3 Name Test 3 UUT S/N	3									
Test 4 Name Test 4 UUT S/N	4									
Test 5 Name Test 5 UUT S/N	5									
Test 6 Name Test 6 UUT S/N	6									
Test 7 Name Test 7 UUT S/N	N/A		By Analysis	N/A	N/A				N/A	
Test 8 Name Test 8 UUT S/N	N/A		By Analysis	N/A	N/A				N/A	

*Acronyms in the table above are defined as follows:

ATP - Acceptance Test Procedure
N/A - Not applicable
S/N - Serial Number
UUT - Unit Under Test

14. Individual Test Summaries. For each of the tests listed in the table of item 13, provide in separate test subparagraphs, each beginning at the top of a new page, the following information. These summaries are typically 2 to 4 pages in length each, but may be exceeded as necessary to adequately cover the required information.
    a. Significant events that occurred or relevant observations.
    b. Test procedure errors made or deviations taken.
    c. The effect, if any, of (a) and (b) on the test outcome or results.
    d. Pass/Fail criteria that were not met and the significance of the failure.
    e. Proposed remedies or design changes as a result of failures.
    f. Any other relevant information.
    g. Statement on whether or not the Unit Under Test (UUT) met its qualification test objectives.

15. Disassembly and Inspection.
    a. Each disassembled part or subcomponent shall be discussed in detail as to: condition with respect to a new part, continued usability, and likelihood of impending failure.
    b. Photos of each part or subcomponent must be clear and in color; photocopied pictures are not acceptable if they do not provide adequate detail.

16. Conclusion.

17. Appendix A – Component Non-Conformance.
    a. Include all material discrepancy actions, plus any other documentation of unit nonconformance.
    b. Documentation of Airworthiness Authority approval.

18. Appendix B – Test Plan Documentation.
    a. Documentation of Airworthiness Authority approval.
    b. Documentation of Contractor approval.

19. Appendix C – Test Readiness Documentation.
    a. Documentation of Airworthiness Authority approval.
    b. TRR presentation or other material.

20. Appendix D – ATPs or Calibrations Conducted During Testing.

21. Appendix E - Individual Test Reports and Results. Individual reports shall be included in separate 'tabbed' sections. Note that these reports shall not duplicate any of the information provided up through item 20, unless absolutely necessary.
    a. The report shall be organized to generally follow the approved test procedure.
    b. Photographs of all test equipment and test setups shall be included.
    c. Environmental test conditions shall be documented.
    d. Detail the conduct of the test, including a chronological history of events and incidents connected with the test.
    e. A complete analysis of results shall be included, and any pertinent performance/calibration data for illustration purposes.
    f. Clearly highlight (as illustrated in the table below, including reference to applicable data sheets) and discuss in detail any test anomalies, and propose any remedies, if necessary.
    g. Tables and charts shall be utilized to clearly present and summarize the test data. Data for an entire test, presented in the example tabular format below, has been deemed acceptable in most cases.

Parameter	Set-Point	Limit	Actual	Min Value	Max Value	Mean	Std. Deviation	Low Limit	High Limit	Pass/ Fail

Check the source to verify that this is the current version before use.

h. Component condition at test completion shall be detailed or discussed, and conclusions and recommendations rendered.

i. State in the test report whether component performance and function are within established limits. State in the report whether the component under test exhibited any fluid leakage and if fluid leakage is of a nature and rate specified in the engine or component specification. Hang-ups or hesitations of any component, if any, shall be described in the report.

j. State in the report if recalibrations indicate that no component has changed its calibration beyond allowable service limits.

k. State in the test report if the component teardown inspection shows indication of failed, excessively worn, and distorted parts. Measurements shall be taken and compared with engineering drawing dimensions and tolerances or with similar measurements made prior to the test.

22. End of DI-NDTI-81897A.
