Couplings.

Coupling classes. Couplings classes are defined in the individual CID sheets and as follows:

Class A couplings. When attached to hose, class A couplings (garden hose) shall be able to withstand an internal hydrostatic pressure of 100 psi for at least one minute without showing any signs of leakage.

Class AA couplings. Class AA couplings shall be able to withstand an internal hydrostatic pressure of 300 psi for sizes .500 through 1.000 inch, 250 psi for sizes 1.250 and 1.500 inch, 200 psi and for sizes 2.000 through 4.000 inch for at least one minute without showing any signs of leakage. See table I for hose assembly sizes available.

Class B couplings. Type III, class B couplings shall be able to withstand an internal hydrostatic pressure as specified for class AA couplings and a 22-inch mercury vacuum for at least one minute without loss of coupling seal or where the hose joins the coupling. See table I for hose assembly sizes available.

Tightening provisions. Unless otherwise specified pin lugs, shall be located on the swivel nut only. When specified pin lugs shall be located on both male and female sections.
