DEPARTMENT OF THE NAVY

NAVAL SEA SYSTEMS COMMAND

Connectors and Jacketed Cable,
Electric, Selection Standard
For Shipboard Use
MIL-STD-1683A(SH)

1. This Military Standard is approved for use by the Naval Sea Systems Command, Department of the Navy, and is available for use by all Departments and Agencies of the Department of Defense.

2. Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to Commander, Naval Sea Systems Command, ATTN: SEA 55Z3, Washington, DC 20362 by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

FOREWORD

1. The purpose of this standard is to standardize on connector/insert and wiring assignments for jacketed shipboard cable for new ship design. This standard covers the majority of uses and is arranged in a form for quick reference and selection. The applicable connector specification should be used for specific design details.

1. SCOPE

1.1 Scope. This standard is intended for use in selecting the proper connector shell size and insert combination to fit a particular MIL-C-915 cable. In addition, it includes wiring information (cable conductor to connector contact assignments, data for selecting connector hardware accessories, and information regarding certain rectangular connectors.

2. REFERENCED DOCUMENTS

2.1 Issues of documents. The following documents, of the issue in effect on date of invitation for bids or request for proposal, form a part of this standard to the extent specified herein.

3. GENERAL REQUIREMENTS

3.1 Connector selection. The connectors and shipboard jacketed cable shall be selected from the lists specified in this standard. The lists are formulated on the basis of the particular connector insert arrangement for MIL-C-915 cable considering maximum outside wire cable diameter, quantity, and size of conductors versus quantity and accommodating size of the contacts.

3.2 Shell size/insert arrangement combinations. The shell size/insert arrangement combinations included have been selected by cable outer diameter, quantity of contacts associated with the cable characteristics, both to minimize the number of different insert combinations and to keep the number of unused contacts to a minimum.

3.3 Overall shield or group shield. The overall shield or group shield (for example shielded singles, shielded pairs) are treated as a conductor and are listed in the wiring information as a conductor to be connected through a connector contact. This approach indicates a maximum usage or worse case condition. Shielding techniques are in accordance with MIL-STD-1310.

3.4 Discontinued and obsolete cables. Discontinued and obsolete cables are not contained in this document.

3.5 Armored cable and R.F.I. adapters. Armored cables shall have the same connector/insert and contact assignments as their counterparts (for example TSGA-3 same as TSGU-3). Additionally, the RFI adapter is required on backshells.

4. DETAIL REQUIREMENTS

4.1 Connector and cabling configurations. This standard provides connector and cabling information for the following configurations:

(a) MIL-C-5015 connectors on both ends of MIL-C-915 cable.
(b) Type 2U45 cable (MIL-C-915/63):
    (1) 104-pin, size 16 contact, MIL-C-5015 connector on both ends.
    (2) 104-pin, size 16 contact, MIL-C-5015 connector on one end and a 90- or 120-pin rectangular connector on the other end.
(c) MIL-C-28840 - Connectors on both ends of MIL-C-915 cable.

4.2 Connector inserts to cable. The appropriate insert to cable requirements are given in the applicable section of this standard.

4.3 Cables not listed. MIL-C-915 cable types which do not appear in the connector/insert data sheets are omitted because of various mismatches.

4.4 Insert arrangements. The insert views depicted on the connector/insert data sheets represent the wiring side of a socket (receptacle) and present information regarding quantity and size of contacts.

4.5 Part numbering system. An example of the part numbering system for MIL-C-5015 connectors is as follows:

An example of the complete MS part number of connectors is shown below. For individual data and ordering information see MIL-C-5015 or the MS sheet, or both, as applicable.

NOTE 1: The marking of the connector sizes, on a package of a DJ type connector, will be designated as follows:

10SL becomes 11
12S becomes 13
14S becomes 15
16S becomes 17

This is for Class D and DJ connectors only, but the connector and it's associated parts will be marked with the MIL-C-5015 part number.

4.5.1 Backshell hardware. For detail information on the backshell hardware, see the applicable MS sheet (MS3188, 3189, or 3437).

Class Code
Classes are designated by code letter:

CODE LETTER	CLASS	
A	D	- Aluminum Alloy Connector with fused Cadmium (O.D.) over electroless nickel finish-fluorosilicone elastomer seals
B	DS	- Stainless Steel Connector with fused Cadmium (black) over nickel finish-fluorosilicone elastomer seals.
C	DJ	- Aluminum Alloy Backshell-Connector Assembly with fuse Cadmium (O.D.) over electroless nickel finish-fluorosilicone elastomer seals.
E	DJS	- Stainless Steel Backshell-Connector Assembly with fused Cadmium (black) over nickel finish-fluorosilicone elastomer seals.

Shell Size Desig.

Shell sizes are designated by code letter:

DESIGNATOR	SHELL SIZE
A	11
B	13
C	15
D	17
E	19
F	23
G	25
H	29
J	33

Key Position

Alternate keying positions (rotation of minor keys) see catalog section for plug and receptacle key and keyway positions.

Contact Style

CONTACT DESIGNATOR
P = Pin Contacts 20-22
S = Socket Contacts 20-22
A = Pin Insert - no pins supplied
B = Socket Insert - no sockets supplied
D = Pin Contacts 20-26
E = Socket Contacts 20-28
F = Pin Contacts 20-20
G = Socket Contacts 20-20

BACKSHELL STYLE DESIGNATOR
A-EMI/Environmental
B-Environmental

Backshell size designator Sizes
The backshells are identified by the appropriate letter: A, B, C or D as shown in the applicable specification sheet of MIL-C-28840.

Insert Arr.
Inserts are designated by shell size, code letter, and by a code number. Example: G-1 is shown in MIL-STD-1698 as a size 25 insert containing ninety-two #20 contacts.

4.6.1 Backshell hardware. For detail information on the backshell hardware see the applicable specification sheet (MIL-C-28840/6, /8, or /9).

5. EXPLANATION OF DATA SHEET ORGANIZATION

5.1 The views depicted on these Data Sheets represent the wiring side of a socket (receptacle) and present information regarding quanitity and size of contact and insert arrangement.

Insert arrangement	10SL-3
Number of contacts	3
Contact size	16

5.2 Cable types to which the insert is assigned are listed, followed by wiring information.

5.3 The Data Sheets which follow are arranged in numerical order for each section by insert arrangement number, see tables for list of inserts.

5.4 Where data for a particular insert arrangement runs to more than one page, a suitable notation so indicates.

5.5 Unless otherwise noted, an asterisk (*) in the wiring information denotes an unused contact.
