COMMERCIAL ITEM DESCRIPTION

CHART SET, ANATOMICAL

The General Services Administration has authorized the use of this Commercial Item Description as a replacement for MIL-C-16438 which is cancelled.

This Commercial Item Description covers an anatomical chart set.

Salient Characteristics:

The anatomical chart set shall consist of eleven charts with illustrations depicting parts of the human body with each anatomical part numbered. The set shall be suitable for use as a teaching aid in military medicine and dentistry and shall consist of the following:

The skeleton (2 figures)

1. Human skeleton, front view
2. Human skeleton, back view

The muscles (2 figures)

1. The muscles, front view
2. The muscles, back view

The nervous and circulatory system (2 figures)

1. The nervous system
2. The circulatory system

Circulation (5 figures)

1. Schema of the circulation
2. Anterior coronal section of heart
3. Posterior coronal section of heart, with separate illustrations of semi-lunar valve and mitral valve as seen from above
4. Hairless skin

AMSC N/A FSC 6910

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

5. Section through hairy skin

The eye and ear (5 figures)

1. The human ear
2. The internal ear or the membranous labyrinth
3. The human ear, horizontal section
4. Posterior half of eye, viewed from front
5. Anterior half of eye, viewed from behind

The chest and abdomen (4 figures)

1. The viscera of the chest and abdomen, first layer
2. The viscera of the chest and abdomen, second layer
3. The viscera of the chest and abdomen, third layer
4. The viscera of the chest and abdomen, fourth layer

The head and neck (5 figures)

1. Median section through head
2. Lateral view of upper and lower jaws (the nerve supply of lower jaw)
3. The mouth cavity (cheeks cut to allow distention of jaws)
4. Coronal section of neck, view from behind (the pharynx cut open)
5. Horizontal section of neck (the section through the second cervical vertebra)

The digestive system (9 figures)

1. The digestive tract, central figure
2. Circulation of the digestive tract
3. Course of the digestive tract
4. The stomach
5. The caecum and appendix
6. The liver, pancreas and duodenun
7. The upper ileum
8. The jejunum
9. The rectum

The endocrine glands (9 figures)

1. Endocrine glands, central figure
2. Adrenal, adult and newborn (also, cross-section of each)

Check the source to verify that this is the current version before use.

3. Hypophysis, adult (sagittal section, side view and top view)
4. Ovary, adult (cross-section, section through graffian follicle and ovarian tissue, corpus luteum from ovary, pregnancy, and late pregnancy)
5. Pancreas, adult
6. Pineal, adult (sagittal section and top view)
7. Testis, adult (also, illustration showing stages of spermatogenesis)
8. Thymus (at six months, and back view of newborn)
9. Thyroid and parathyroid

    a. Back view
    b. Thyroid, adult, follicles
    c. Parathyroid, adult

Male - female genito-urinary organs

1. Male genito-urinary organs, external and internal (4 figures)

    a. Anterior view of bladder, prostate and penis (the left testicle and cord shown in situ, the right testicle dissected so as to show the internal structure)
    b. Posterior view of bladder, prostate, seminal vesicles and vas deferens
    c. Sagittal section through left half of pelvis showing genito-urinary tract
    d. Median sagittal section through pelvis showing genito-urinary tract

2. Female genito-urinary organs (4 figures)

    a. Anterior view of uterus, adnexa, bladder and external genitalia (the left half shown in coronal section and dissected so as to display the internal structures)
    b. Bladder and urethra, cut open to show interior (anterior view)
    c. Median sagittal section through pelvis (showing bladder, uterus with early pregnancy, right appendages, rectum and external genitalia)
    d. Median sagittal section at first stage of labor

The lymphatic system (10 figures)

1. Lymphatic system, central figure (adult female)
2. Abdomen
3. Thorax
4. Female pelvis
5. Male pelvis
6. Thymus, newborn (with an enlarged illustration of wedge section removed)
7. Spleen (with an enlarged illustration of schematic section)
8. Palatine tonsil (block section)
9. Lymph node (enlarged illustration)
10. Lymphatic tissues, characteristics of cells (enlarged illustration)

The charts shall be life-size illustrations, or larger, of the various parts of the human body, all lithographed in non-fading natural colors on best quality offset paper or synthetic tear-proof paper, backed with a durable, high tensile strength fabric, mounted on a spring roller, labeled with title and number, and be provided with dustproof cover. The chart dimensions shall be approximately 64 inches in length by 42 inches in width.

The eleven life-size charts shall be mounted on one heavy-duty spring roller display unit that will permit ready exhibit of any individual chart. Mounting hardware shall be furnished.

Each anatomical part shall be numbered on the chart and the chart set shall be provided with a manual or index, in book form, listing the numbers with the corresponding names of the numbered parts in both English and Latin.

Workmanship. The anatomical chart set shall be free from defects which detract from its appearance or impair its serviceability.

Unit. Set (SE). One package containing one set of eleven charts, as specified, constitutes one unit.

Quality Assurance Provisions.

Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for

Check the source to verify that this is the current version before use.

the performance of all inspection requirements as specified herein. Except as otherwise specified in the contract or purchase order, the contractor may use his own or any facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the Government. The Government reserves the right to perform any of the inspections set forth in the specification where such inspections are deemed necessary to assure supplies and services conform to prescribed requirements.

Records. Records of examinations and tests performed by or for the contractor shall be maintained by the contractor and made available to the Government upon the Government's request, at any time, or from time to time, during the performance of the contract and for a period of three years after delivery of the supplies to which such records relate.

Inspection. Inspection, as used herein, is defined as both examination (such as visual or auditory investigation without the use of special laboratory appliances or procedures) and testing (determination by technical means of physical and chemical properties) of the item.

Sampling for examination. Sampling for examination shall be conducted in accordance with MIL-STD-105, with an AQL of 4.0 (percent defective) and an inspection level of II. The unit of product for examination purposes shall be one anatomical chart set.

Sampling for tests. Sampling for tests, including dimensional test, shall be conducted in accordance with MIL-STD-105, with an AQL of 2.5 (percent defective) and an inspection level of S-3. The unit of product for test purposes shall be one anatomical chart set.

Metric products. Products manufactured to metric dimensions will be considered on an equal basis with those manufactured using inch-pound units, providing they fall within the tolerances specified using conversion tables contained in the latest revision of Federal Standard 376, and all other requirements of this document are met.

If a product is manufactured to metric dimensions and those dimensions exceed the tolerances specified in the inch/pound units, a request should be made to the contracting officer to

Check the source to verify that this is the current version before use.

determine if the product is acceptable.

The contracting officer has the option of accepting or rejecting the product.

Contractor certification. The contractor shall certify that the product offered meets the salient characteristics of this description and conforms to the producers' own drawings, specifications, standards, and quality assurance practices. The Government reserves the right to require proof of such conformance prior to first delivery and thereafter as may be otherwise provided for under the provisions of the contract.

Regulatory requirements.

Federal Food, Drug and Cosmetic Act. If the product covered by this document has been determined by the U.S. Food and Drug Administration to be under its jurisdiction, the offeror/contractor shall comply, and be responsible for compliance by its subcontractors/suppliers, with the requirements of the Federal Food, Drug and Cosmetic Act, as amended, and regulations promulgated thereunder. In addition, the offeror/contractor shall comply, and be responsible for compliance by its subcontractors/suppliers, with the requirements of all other applicable Federal, State, and local statutes, ordinances and regulations.

Recovered materials. The offeror/contractor is encouraged to use recovered material in accordance with Federal Acquisition Regulation Subpart 23.4 to the maximum extent practical.

Preservation, packaging, packing, labeling, and marking. Unless otherwise specified, preservation, packaging, and packing shall be to a degree of protection to preclude damage to containers and/or contents thereof under normal shipping conditions, handling, etc., involving shipment from the supply source to the receiving activity, plus reshipment from receiving activity, and shall conform to applicable carrier's rules and regulations. Intermediate and exterior package quantities and labeling and marking shall be as specified in the contract and/or order.

Ordering data. Intermediate/exterior package quantities, labeling, and marking must be specified in the contract and/or order.
