The documentation and process conversion measures necessary to comply with this revision shall be completed by 10 December 2003.

INCH-POUND

MIL-PRF-19500/533F
10 September 2003
SUPERSEDING
MIL-PRF-19500/533E
20 September 1999

PERFORMANCE SPECIFICATION

* SEMICONDUCTOR DEVICE, DIODE, SILICON, VOLTAGE REGULATOR TYPES 1N6309 THROUGH 1N6355; 1N6309US THROUGH 1N6336US; PLUS C AND D TOLERANCE SUFFIX, JAN, JANTX, JANTXV, AND JANS

This specification is approved for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

* 1.1 Scope. This specification covers the performance requirements for microminiature 500 mW, silicon, metallurgically bonded, voltage regulator diodes with voltage tolerances of 5 percent, 2 percent, and 1 percent. Four levels of product assurance are provided for each encapsulated device type as specified in MIL-PRF-19500.

1.2 Physical dimensions. See figure 1 (DO-35) and figure 2 (surface mount).

* 1.3 Maximum ratings. Maximum ratings are as shown in maximum and primary test ratings (see 3.11) herein and as follows:

a. P_T = 500 mW (D0-35) at T_L = + 75°C, L = .375 inch (9.53 mm); both ends of case or diode body to heat sink at L = .375 inch (9.53 mm). (Derate I_Z to 0.0 mA dc at +175°C).

b. P_T = 500 mW (surface mount) at T_{EC} = 125°C. (Derate to 0 at 175°C).

c. 65°C ≤ T_J ≤ +175°C; -65°C ≤ T_{STG} ≤ +175°C.

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Defense Supply Center, Columbus, ATTN: DSCC/VAC, Post Office Box 3990, Columbus, OH 43216-5000, by using the Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

AMSC N/A FSC 5961
DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T02:52Z
Check the source to verify that this is the current version before use.

* 1.4 Primary electrical characteristics. Primary electrical characteristic are shown in maximum and primary test ratings (see 3.11) herein and as follows:

a. 2.4 V dc ≤ V_Z ≤ 200 V dc (nominal).

b. 1N6309D through 1N6355D are 1 percent voltage tolerance.

c. 1N6309C through 1N6355C are 2 percent voltage tolerance.

d. 1N6309 through 1N6355 are 5 percent voltage tolerance.

e. $R_{\theta JL}$ = 200°C/W (maximum) at L = .375 inch (9.53 mm) (D0-35) non-surface mount.

f. $R_{\theta JL}$ = 50°C/W (maximum) at L = 0 inch non-surface mount.

g. $R_{\theta JEC}$ (end-cap) = 50°C/W (maximum) surface mount.

2. APPLICABLE DOCUMENTS

2.1 General. The documents listed in this section are specified in sections 3 and 4 of this specification. This section does not include documents cited in other sections of this specification or recommended for additional information or as examples. While every effort has been made to ensure the completeness of this list, document users are cautioned that they must meet all specified requirements documents cited in sections 3 and 4 of this specification, whether or not they are listed.

2.2 Government documents.

2.2.1 Specifications, standards, and handbooks. The following specifications, standards, and handbooks form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those listed in the issue of the Department of Defense Index of Specifications and Standards (DoDISS) and supplement thereto, cited in the solicitation (see 6.2).

SPECIFICATION

DEPARTMENT OF DEFENSE

MIL-PRF-19500 - Semiconductor Devices, General Specification for.

STANDARD

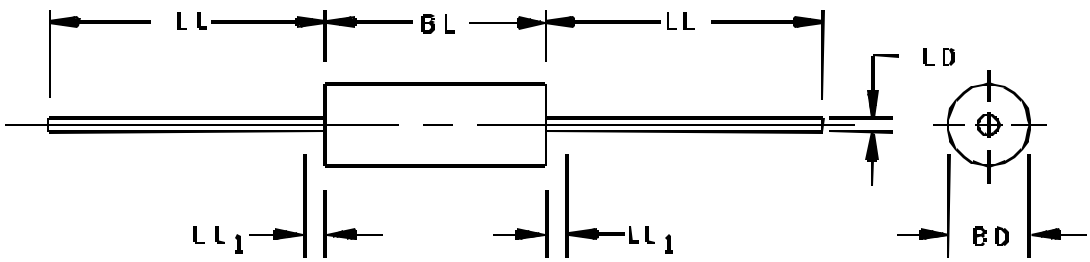

DEPARTMENT OF DEFENSE

MIL-STD-750 - Test Methods for Semiconductor Devices.

(Unless otherwise indicated, copies of the above specifications, standards, and handbooks are available from the Document Automation and Production Services (DAPS), Building 4D (DPM-DODSSP), 700 Robbins Avenue, Philadelphia, PA 19111-5094.)

2.3 Order of precedence. In the event of a conflict between the text of this document and the references cited herein, the text of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

* 3.1 General. The individual item requirements shall be as specified in MIL-PRF-19500 and as modified herein.

3.2 Qualification. Devices furnished under this specification shall be products that are manufactured by a manufacturer authorized by the qualifying activity for listing on the applicable qualified manufacturer's list (QML) before contract award (see 4.2 and 6.3).

3.3 Abbreviations, symbols, and definitions. Abbreviations, symbols, and definitions used herein shall be as specified in MIL-PRF-19500 and as follows.

C .....2 percent voltage tolerance.
D .....1 percent voltage tolerance.
EC .....End-cap.
T_{EC} .....Temperature of end-cap.
US .....Unleaded square end-cap.

3.4 Interface and physical dimensions. Interface and physical dimensions shall be as specified in MIL-PRF-19500 and on figure 1 (DO - 35) and figure 2 (surface mount) herein.

* 3.5 Construction. All devices shall be metallurgically bonded, thermally matched, non-cavity, double-plug construction in accordance with MIL-PRF-19500.

3.5.1 Metalurgical bond for diodes with V_Z greater than 6.8 V dc. Category I bonds as defined in accordance with MIL-PRF-19500 shall be utilized.

3.5.2 Metalurgical bond for diodes with V_Z less than or equal to 6.8 V dc. Category I or category III bonds as defined in accordance with MIL-PRF-19500 shall be utilized.

3.6 Marking. Marking shall be in accordance with MIL-PRF-19500.

3.6.1 Marking of US version devices. Marking of US devices shall be in accordance with MIL-PRF-19500.

3.6.2 Polarity. The polarity shall be indicated with a contrasting color band to denote the cathode end. Alternately, for surface mount (US) devices, a minimum of three evenly spaced contrasting color dots around the periphery of the cathode end may be used. No color coding will be permitted.

3.7 Lead finish. Lead finish shall be solderable as defined in MIL-PRF-19500, MIL-STD-750, and herein. Where a choice of lead finish is desired, it shall be specified in the acquisition document (see 6.2).

3.8 Selection of tight tolerance devices. The C and D suffix devices shall be selected from JAN, JANTX, JANTXV, and JANS devices which have successfully completed all applicable screening, and tables I, II and III testing as 5 percent tolerance devices. All sublots of C and D suffix devices shall pass table I, subgroup 2, at tightened tolerances. Tighter tolerances for mounting clip temperature shall be maintained for reference purposes to establish correlation. For C and D tolerance levels, T_L = 25°C, +1°C, -3°C at .375 inch (9.53 mm) from body or equivalent.

3.9 Electrical performance characteristics. Unless otherwise specified herein, the electrical performance characteristics are as specified in 1.3, 1.4, and table I herein.

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T02:52Z
Check the source to verify that this is the current version before use.

3.10 Electrical test requirements. The electrical test requirements shall be the subgroups specified in table I and II herein.

* 3.11 Maximum and primary test ratings. Maximum and primary test ratings for voltage regulator diodes are specified in table III herein.

3.12 Workmanship. Semiconductor devices shall be processed in such a manner as to be uniform in quality and shall be free from other defects that will affect life, serviceability, or appearance.

4. VERIFICATION

4.1 Classification of inspections. The inspection requirements specified herein are classified as follows:

a. Qualification inspection (see 4.2).

b. Screening (see 4.3).

c. Conformance inspection (see 4.4).

4.1.1 Lot accumulation. Lot accumulation period shall be 3-months in lieu of 6-weeks.

4.2 Qualification inspection. Qualification inspection shall be in accordance with MIL-PRF-19500 and herein.

4.2.1 Group E qualification. Group E qualification shall be performed herein for qualification or requalification only. In case qualification was awarded to a prior revision of the associated specification that did not request the performance of table II tests, the tests specified in table II herein shall be performed on the first inspection lot to this revision to maintain qualification.

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T02:52Z
Check the source to verify that this is the current version before use.

4.3 Screening (JANTX, JANTXV, and JANS levels only). Screening shall be in accordance with table IV of MIL-PRF-19500, and as specified herein. The following measurements shall be made in accordance with table I herein. Devices that exceed the limits of table I herein shall not be acceptable.

Screen (see table IV of MIL-PRF-19500)	Measurement	
	JANS level	JANTXV and JANTX level
1a 1b	Required Required	Not required Required (JANTXV only)
2	Not required	Not required
3a 3b (1) 3c	Required Not applicable Required (see 4.3.1)	Required Not applicable Required (see 4.3.1)
4, 5, 6 and 7a	Not applicable	Not applicable
7b	Required	Required
8	Required	Not required
9	Required on Nom $V_Z > 10$ V I_{R1} V_{Z2} and Z_Z	Not applicable
10	Required on Nom $V_Z > 10$ V	Not applicable
11	Required I_{R1} V_{Z2}; $\Delta I_{R1} \leq 100$ percent of value or 50 nA dc, whichever is greater. $\Delta V_{Z2} \leq \pm 1$ percent of initial value.	Required I_{R1} and V_{Z2}
12	Required, see 4.3.2	See 4.3.2
(2) 13	Required Scope display, see 4.5.9 Subgroup 2 and 3 of table I herein; $\Delta I_{R1} \leq$ 100 percent of initial reading or 50 nA whichever is greater; $\Delta V_{Z2} \leq 1$ percent of initial reading.	Subgroup 2 of table I herein; $\Delta I_{R1} \leq 100$ percent of initial reading or 50 nA whichever is greater; $\Delta V_{Z2} \leq 1$ percent of initial reading.
14a 14b	Not applicable Optional	Not applicable Optional
15	Required	Not required
16	Required	Not required
17	Not required	Not required

(1) Thermal impedance may be performed any time after sealing provided temperature cycling is performed in accordance with MIL-PRF-19500, screen 3 prior to this thermal test.

(2) $Z_{\theta JX}$ need not be performed in screen 13, if prior to screen 13.

4.3.1 Thermal impedance ($Z_{\theta JX}$ measurements). The thermal impedance($Z_{\theta JX}$) measurements shall be performed in accordance with method 3101 of MIL-STD-750. The maximum limit for $Z_{\theta JX}$ in screening (table IV of MIL-PRF-19500) shall be developed by the supplier using statistical techniques and shall not exceed the table I, subgroup 2 limit.

* 4.3.2 Power burn-in conditions. Power burn-in conditions are as follows: The test current I_Z shall be adjusted to produce a junction temperature of +125°C minimum and I_Z minimum shall be equal to 50 percent of column 8 of table III (see 4.5.10). Use method 3100 of MIL-STD-750 to measure T_J.

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T02:52Z
Check the source to verify that this is the current version before use.

4.4 Conformance inspection. Conformance inspection shall be in accordance with MIL-PRF-19500, and as specified herein.

4.4.1 Group A inspection. Group A inspection shall be conducted in accordance with table V of MIL-PRF-19500. End-point electrical measurements shall be in accordance with table I,subgroup 2 herein. The following test conditions shall be used for $Z_{\theta JX}$, group A inspection: $Z_{\theta JX} \leq 15°C/W$.

a. I_M .....1 mA to 10 mA.

b. I_H .....2 A minimum.

c. t_H .....10 ms.

d. t_{MD} .....70 µs maximum.

4.4.2 Group B inspection. Group B inspection shall be conducted in accordance with the conditions specified for subgroup testing in table VIa (JANS) and table VIb (JAN, JANTX and JANTXV) of MIL-PRF-19500, and herein. Electrical measurements (end-points) and delta requirements shall be in accordance with table I, subgroup 2 and 4.5.8 herein.

* 4.4.2.1 Group B inspection, table VIa (JANS) of MIL-PRF-19500.

Subgroup	Method	Condition
B3	1056	0°C to +100°C, 10 cycles, n = 22 c = 0.
B3	1051	-55°C to +175°C, 20 cycles, n = 22 c = 0.
B3	4066	T_A = room ambient as defined in the general requirements of 4.5 of MIL-STD-750. I_{ZSM} = column 9 of table III herein (shall be performed on each sublot).
B3	1071	Condition E.
B4	1037	I_Z = shall be equal to 100 percent of column 7 of table III minimum, 2,000 cycles.
B5	1027	I_Z = 50 percent of column 7 of table III minimum for 96 hours; Adjust T_A and / or I_Z to achieve T_J minimum.
		Option 1: T_A = +100°C max; T_J = +275°C minimum; t = 96 hours. n =22, c = 0.
	or	Option 2: T_A = +30°C max; T_J = +175°C minimum; t = 1,000 hours n = 45, c = 0.

Check the source to verify that this is the current version before use.

4.4.2.2 Group B inspection, table VIb (JAN, JANTX, and JANTXV) of MIL-PRF-19500.

	Subgroup	Method	Condition
	B2	1056	0°C to +100°C, 10 cycles, n = 22 c = 0.
*	B2	1051	-55°C to +175°C, 20 cycles, n = 22 c = 0.
	B2	1071	Condition E.
*	B3	1027	I_Z (min) shall be equal to 50 percent of column 7 of table III minimum. Adjust I_Z to achieve T_J = 150°C minimum (see 4.5.10).

4.4.3 Group C inspection. Group C inspection shall be conducted in accordance with the conditions specified for subgroup testing in table VII of MIL-PRF-19500 and as follows. Electrical measurements (end-points) shall be in accordance with table I, subgroup 2 herein.

Subgroup	Method	Condition
C2	1056	0°C to +100°C, 10 cycles, n = 22 c = 0.
C2	2036	Condition A; 4 pounds; t = 15 seconds ±3 s (not applicable to "US" suffix devices). Condition E, 8 ounces, t = 15 seconds ±3 s (not applicable to "US" suffix devices).
C3	1071	Condition E.
C6	1027	I_Z (min) shall be equal to 50 percent of column 7 of table III minimum. Adjust I_Z to achieve T_J = 150°C minimum (see 4.5.1).
C5	3101 or 4081	$R_{\theta JL}$ = 200°C/W (max) at L = .375 inch (9.53 mm); $R_{\theta JEC}$ = 50°C/W (max) for US types. n = 22, c = 0 (see 4.5.8).
C7		Not applicable
C8	4071	(For JAN, JANTX and JANTXV only); I_{Z2} = column 4 of table III; T_1 = +25°C ± 5°C, T_2 = +125°C (see 4.5.5); αV_Z = Col. 15 of table III; n = 22 devices, c = 0.

4.4.4 Group E inspection. Group E inspection shall be conducted in accordance with the conditions specified for subgroup testing in table IX of MIL-PRF-19500 and as specified in table II herein. Electrical measurements (end-points) shall be in accordance with table I, subgroup 2 herein. See 4.5.8 for delta limits when applicable.

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T02:52Z
Check the source to verify that this is the current version before use.

4.5 Methods of inspection. Methods of inspection shall be as specified in the appropriate tables and as follows:

4.5.1 Pulse measurements. Conditions for pulse measurement shall be as specified in section 4 of MIL-STD-750.

4.5.2 Surge current (I_{ZSM}). The peak currents shown in column 9 of table III shall be applied in the reverse direction and these shall be superimposed on the current (I_Z = column 4 of table III); a total of 5 surges at 1 minute intervals. Each individual surge shall be 0.5 -square-wave-pulse of 8.3 ms duration or an equivalent sine wave with the same effective rms current.

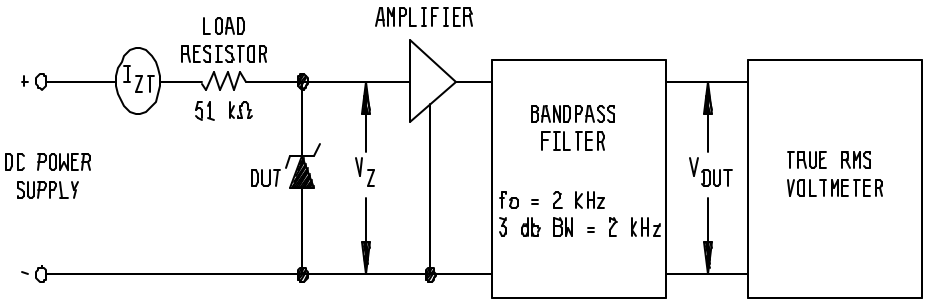

4.5.3 Regulator voltage measurements. The test current shall be applied until thermal equilibrium is attained (90 ±2 seconds minimum) prior to reading the breakdown voltage. For this test, the diode shall be suspended by its leads with mounting clips whose inside edge is located at .375 inch (9.53 mm) from the body and the mounting clips shall be maintained at a temperature of +25°C +8°C, -2°C. US suffix devices shall be mounted at the end caps. This measurement may be performed after a shorter time following application of the test current than that which provides thermal equilibrium if correlation to stabilized readings can be established to the satisfaction of the qualifying activity.

4.5.4 Voltage regulation. For values of V_{Z2} (nominal) from 6.8 V dc to 200 V dc, current at 10 percent of I_{ZM} (column 7 of table III) shall be maintained for a period of 90 ±5 seconds, and then V_Z shall be recorded. The current shall then be increased to 50 percent of I_{ZM} (column 7 of table III) and maintained for a period of 90 ±5 seconds, and then V_Z shall be recorded. The voltage change shall not exceed the applicable limits as shown in, column 8 of table III. During this test, the diode shall be suspended by its leads with mounting clips whose inside edge is located between .375 inch (9.53 mm) and .500 inch (12.70 mm) from the device body and the mounting clips shall be maintained at a temperature of + 25°C + 8°C, -2°C. US suffix devices shall be mounted by the end-caps. For values of V_{Z2} (nominal) from 2.4 V dc to 6.2 V dc, the lower test current shall be 2 mA dc and the higher current shall be 20 mA dc.

4.5.5 Temperature coefficient of regulator voltage (αV_Z). The device shall be temperature stabilized with current applied prior to reading regulator voltage at the specified ambient temperature.

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T02:52Z
Check the source to verify that this is the current version before use.

4.5.6 Noise density. Noise density shall be measured using a noise density test circuit as shown on figure 3. Place a low-noise resistor, equivalent in value to the dynamic impedance of the diode under test, in the test clips and adjust test current (I_{ZT}) to 250 µA dc and measure output-noise voltage. Remove the resistor, insert diode under test in test clips, readjust test current to 250 µA dc and measure output-noise voltage again. To obtain noise density (N_D), subtract rms resistor output-noise voltage from rms diode output-noise voltage and divide by product of overall system gain and square root of bandwidth. All measurements shall be made at +25°C.

NOTES:

1. Input voltage and lead resistance should be high so that zener can be driven from a constant current source.
2. Input impedance of band pass filter should be high compared with the dynamic impedance of the diode under test.
3. Filter bandwidth characteristics shall be as follows:
   a. f_o = 2,000 Hz.
   b. Shape factor, -40 db to -3 db, approximately 2.
   c. Passband at the -3 db is 1,000 Hz ±50 Hz to 3,000 Hz ±250 Hz.
   d. Passband at the -40 db is 500 Hz ± 50 Hz to 6,000 Hz ±600 Hz.

FIGURE 3. Circuit for determination of noise density.

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T02:52Z
Check the source to verify that this is the current version before use.

4.5.7 Thermal resistance. Thermal resistance measurement shall be in accordance with methods 3101 or 4081 of MIL-STD-750. Read and record data in accordance with group E herein shall be included in the qualification report. Forced moving air or draft shall not be permitted across the device during test. The maximum limit for $R_{\theta JL}$ under these test conditions shall be $R_{\theta JL}$ (max) = 200°C/W, for surface mount $R_{\theta JEC}$ = 50°C/W. The following conditions shall apply:

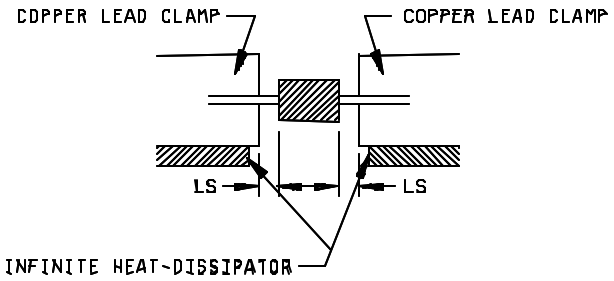

a. I_M ..... 1 mA to 10 mA.

b. I_H ..... 200 mA to 400 mA.

c. t_H ..... 25 seconds minimum.

d. t_{MD} ..... 70 µs maximum.

LS = lead spacing = .375 inch (9.53 mm) for non-surface mount devices and 0 inch for surface mount devices as defined on figure 4 below:

NOTES:

1. The lead temperature, T_L shall be measured on a lead at a point adjacent to the heat sink clamp (reference point).
2. The clamping force on each lead shall be 4 ± 0.5 pounds.
3. The device under test (DUT) shall be shielded from drafts.
4. The heat sink clamps shall be placed equal distance from each end of the diode body.
5. For surface mount devices, the end caps shall be clamped to the heat sinks.

FIGURE 4. Mounting conditions.

Check the source to verify that this is the current version before use.

4.5.8 Delta requirements. Delta requirements shall be as specified below: (1) (2) (3)

Step	Inspection	MIL-STD-750		Symbol	Limit (1)	Unit
		Method	Conditions			
1.	Regulator voltage	4022	I_Z = column 4 of table III (see 4.5.3).	ΔV_{Z2}	±1 percent of initial value.	
2.	Reverse current	4016	DC method, V_R = column 10 of table III.	ΔI_{R1}	100 percent of initial value or 50 nA dc, whichever is greater.	
3.	Small-signal breakdown impedance	4051	I_Z = column 4 of table III, I_{SIG} = 10 percent of I_Z.	ΔZ_Z	±35 percent of initial value or 2 ohms, whichever is greater.	

(1) Column references are to table II herein.
(2) The delta measurements for table VIa (JANS) of MIL-PRF-19500 are as follows:
  a. Subgroup 4, steps 1, 2 and 3.
  b. Subgroup 5, steps 1, 2 and 3.
(3) The delta measurements for table VIb (JAN, JANTX, and JANTXV) of MIL-PRF-19500 are as follows:
  a. Subgroup 3, step 1.

* 4.5.9 Scope display evaluation. Scope display evaluation shall be stable in accordance with method 4023 of MIL-STD-750, condition A. Scope display may be performed on ATE (automatic test equipment) for screening only with the approval of the qualifying activity. Scope display in table I, subgroup 4 shall be performed on a scope. The reverse current over the knee shall be 500 µA peak.

* 4.5.9.1 Scope display option. At the suppliers option, 100 percent scope display evaluation may be discontinued after three consecutive lots are 100 percent tested with zero failures. Any table I failure shall require 100 percent scope display to be reinvoked.

* 4.5.10 Free air burn-in. Deliberate heat sinking or forced air-cooling is prohibited unless otherwise approved by the qualifying activity. Ambient temperature shall be controlled to prevent T_J from exceeding rated T_J. The use of a current limiting or ballast resistor is permitted provided that each DUT still sees the full P_t (minimum) and that the minimum applied voltage, where applicable, is maintained through out the burn-in period.

.

* TABLE II. Group E inspection (all quality levels).

Inspection	MIL-STD-750		Sampling plan
	Method	Conditions	
Subgroup 1			22 devices c = 0
Temperature cycling	1056	20 cycles, condition D except low temperature shall be achieved using liquid nitrogen (-195°C). Do a visual for cracked glass.	
Electrical measurements		See table I, subgroup 2	
Subgroup 2			22 devices c = 0
Intermittent operating life	1037	$I_Z = I_{Z2}$ (column 8 of table III) at T_A = room ambient for 10,000 cycles. No forced air cooling on the device shall be permitted. (Mounting conditions in accordance with 4.5.7).	
Electrical measurements		See table I, subgroup 2	
Subgroup 3			3 devices, c = 0
DPA	2101	Cross section or scribe and break.	
Subgroup 4			22 devices c = 0
Thermal impedance curves	3101 or 4081	Each supplier shall submit their (typical) design thermal impedance curves. In addition, test conditions and $Z_{\theta JX}$ limit shall be provided to the qualifying activity in the qualification report.	
Subgroups 5 and 6			
Not applicable			
Subgroup 7			n = 45
Resistance to glass cracking	1057	Step stress to destruction by increased cycles or up to a maximum of 25 cycles.	
Subgroup 8			n = 45, c = 0
Soldering heat	2031	One cycle.

5. PACKAGING

5.1 Packaging. For acquisition purposes, the packaging requirements shall be as specified in the contract or order (see 6.2). When actual packaging of materiel is to be performed by DoD personnel, these personnel need to contact the responsible packaging activity to ascertain requisite packaging requirements. Packaging requirements are maintained by the Inventory Control Point's packaging activity within the Military Department or Defense Agency, or within the Military Department's System Command. Packaging data retrieval is available from the managing Military Department's or Defense Agency's automated packaging files, CD-ROM products, or by contacting the responsible packaging activity.

6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

6.1 Intended use. The notes specified in MIL-PRF-19500 are applicable to this specification.

6.2 Acquisition requirements. Acquisition documents must specify the following:

a. Title, number, and date of this specification.

b. Issue of DoDISS to be cited in the solicitation and if required, the specific issue of individual documents referenced (see 2.2.1).

c. Lead finish as specified (see 3.7).

d. Type designation and quality assurance level.

e. Packaging requirements (see 5.1).

6.3 Qualification. With respect to products requiring qualification, awards will be made only for products which are, at the time of award of contract, qualified for inclusion in Qualified Manufacturer's List QML No.19500 whether or not such products have actually been so listed by that date. The attention of the contractors is called to these requirements, and manufacturers are urged to arrange to have the products that they propose to offer to the Federal Government tested for qualification in order that they may be eligible to be awarded contracts or orders for the products covered by this specification. Information pertaining to qualification of products may be obtained from Defense Supply Center, Columbus, ATTN: DSCC-VQE, P.O. Box 3990, Columbus, OH 43216-5000.

6.4 Substitution information.

6.4.1 Substitutability of 2 percent and 1 percent tolerance devices. Devices of tighter tolerance are a direct one way substitute for the looser tolerance devices (example: JANTX1N6309D-1 substitutes for JANTX1N6309-1).

6.5 Changes from previous issue. The margins of this specification are marked with asterisks to indicate where changes from the previous issue were made. This was done as a convenience only and the Government assumes no liability whatsoever for any inaccuracies in these notations. Bidders and contractors are cautioned to evaluate the requirements of this document based on the entire content irrespective of the marginal notations and relationship to the last previous issue.

STANDARDIZATION DOCUMENT IMPROVEMENT PROPOSAL

INSTRUCTIONS

1. The preparing activity must complete blocks 1, 2, 3, and 8. In block 1, both the document number and revision letter should be given.

2. The submitter of this form must complete blocks 4, 5, 6, and 7.

3. The preparing activity must provide a reply within 30 days from receipt of the form.

NOTE: This form may not be used to request copies of documents, nor to request waivers, or clarification of requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements.

I RECOMMEND A CHANGE:	1. DOCUMENT NUMBER MIL-PRF-19500/533F	2. DOCUMENT DATE 10 September 2003

3. **DOCUMENT TITLE**
SEMICONDUCTOR DEVICE, DIODE, SILICON, VOLTAGE REGULATOR TYPES 1N6309 THROUGH 1N6355; 1N6309US THROUGH 1N6336US; PLUS C AND D TOLERANCE SUFFIX, JAN, JANTX, JANTXV, AND JANS

4. NATURE OF CHANGE (Identify paragraph number and include proposed rewrite, if possible. Attach extra sheets as needed.)

5. REASON FOR RECOMMENDATION

6. SUBMITTER

a. NAME (Last, First, Middle initial)	b. ORGANIZATION	
c. ADDRESS (Include Zip Code)	d. TELEPHONE (Include Area Code) COMMERCIAL DSN FAX EMAIL	7. DATE SUBMITTED

8. PREPARING ACTIVITY

a. Point of Contact Alan Barone	b. TELEPHONE Commercial DSN FAX EMAIL 614-692-0510 850-0510 614-692-6939 alan.barone@dla.mil
c. ADDRESS Defense Supply Center, Columbus ATTN: DSCC-VAC, P.O.
