DATA ITEM DESCRIPTION

Form Approved
OMB No. 0704-0188

Public reporting burden for this collection of information is estimated to average 110 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302, and to the Office of Management and Budget, Paperwork Reduction Project (0704-0188), Washington, DC 20503.

1 TITLE	2. IDENTIFICATION NUMBER
ELECTRONIC TEST EQUIPMENT CAPABILITY REQUIREMENTS SUMMARY	DI-ATTS-81268

3 DESCRIPTION/PURPOSE

3.1 This is a contractor prepared summary of the technical requirements of a weapon system outlining the measurement ranges, parameters, accuracy requirements, and recommended electronic test equipment. The data will be used to identify and establish Electronic Test Equipment requirements and allowances.

4 APPROVAL DATE (YYMMDD)	5. OFFICE OF PRIMARY RESPONSIBILITY (OPR)	6a. DTIC APPLICABLE	6b. GIDEP APPLICABLE
920604	NAVY - SH		

7. APPLICATION/INTERRELATIONSHIP

7.1 This data item description (DID) contains the format and content preparation instructions for the Electronic Test Equipment (ETE) Capability Requirements resulting from the work task described by paragraph 5.2 of MIL-STD-2121A(SH).

7.2 This DID is to be used with DI-ATTS-81267 Weapons Systems Parameter Worksheet.

7.3 This DID supersedes DI-S-2192.

8. APPROVAL LIMITATION	9a. APPLICABLE FORMS	9b. AMSC NUMBER
	NAVSEA 9491/4	N6739

10. PREPARATION INSTRUCTIONS

10.1 Reference documents. The applicable issues of the documents cited herein, including their approval dates and dates of any applicable amendments, notices and revisions, shall be as specified in the contract.

10.2 Format and content. The electronic test equipment (ETE) capability requirements shall contain all the information indicated in NAVSEA 9491/4. Instructions for completing NAVSEA 9491/4 are as follows:

10.2.1 Weapon system nomenclature. The nomenclature and the Commercial and Government Entity (CAGE) and model number shall be indicated in Block 1.

10.2.2 Weapon system contract number. The contract number for the weapon system shall be indicated in Block 2.

11. DISTRIBUTION STATEMENT

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

Check the source to verify that this is the current version before use.

Block 10. PREPARATION INSTRUCTIONS (Con't)

10.2.3 Weapon system source document. The source doccument used to identify measurement requirements (for example: Technical manual publication number) shall be indicated in Block 3.

10.2.4 Level of Maintenance. The lowest maintenance level shall be indicated by placing an "X" on the appropriate maintenance level in Block 4. Separate sheets are required for each maintenance level.

10.2.5 ETE noun name. The recommended ETE noun name shall be specified in Block 5. The noun name shall be selected from Appendix A of MIL-STD-2121A(NAVY). Only one ETE noun name shall be specified on each NAVSEA 9491/4.

10.2.6 ETE code. The ETE code shall be specified in Block 6. The ETE code shall be selected from Appendix A of MIL-STD-2121A(NAVY). Only one ETE code shall be specified on each NAVSEA 9491/4.

10.2.7 Recommend ETE CAGE and model number. The CAGE and model number of a specific item of ETE known to be capable of meeting or exceeding the requirements of the weapon system for the selected ETE noun name shall be entered in Block 7.

10.2.8 ETE classification. The classification of the ETE in Block 7 is to be specified in Block 8. An "X" shall be indicated in the appropriate space.

10.2.9 Recommended ETE Instrument Calibration Procedure (ICP). The identification number and source of an approved ICP if it exists for the ETE recommended in Block 7 shall be specified in Block 9. If the existing ICP is a Navy procedure, detail "NAVY" in the "source" space of Block 9. If the ICP is other than a Navy ICP, detail the source of the ICP.

10.2.10 ETE capability requirements. The ETE capability requirements shall be indicated in block 10 as follows:

10.2.10.1 Functional capability/parameter descriptor (Block 10a). The ETE functional capabilities and parameter descriptors shall be as described in Appendix C of MIL-STD-2121A(NAVY) for the noun name and ETE code indicated in Block 5 and 6. All capabilities which are excess to specific weapon system requirements, should be annotated with an "N/A" (See 10.2.10.2). The data contained in this block shall consist of the following:

a. Applicable sequence number for functional capability.

b. Function (M-Measure, G-Generate or T-Transform), followed by signal characteristic, e.g. M-AC Voltage.

Check the source to verify that this is the current version before use.

Block 10. PREPARATION INSTRUCTIONS (Con't)

Note: Environmental capabilities of the ETE are designated with an "E".

c. Primary and secondary parameter descriptors with applicable sequence numbers as listed in MIL-STD-2121A(NAVY) Appendix C.

10.2.10.2 Units (Block 10b). Quantitative information shall be indicated using the basic measure unit listed under the "Units" heading opposite each parameter in MIL-STD-2121A(NAVY) Appendix C. A prefix may be added to this basic unit, however, the basic unit shall not be changed. For example the basic unit for frequency shall be Hertz. This term may be modified with prefixes such as kilo, mega, giga, etc., but the basic unit shall not be changed to cycles per second (cps).

10.2.10.3 Parameter values required by the weapon system (Block 10c. The parameter values for each parameter desriptor shall be indicated in Block 10c and shall be based on data derived from the completed Weapon System Parameter Worksheet. The parameter values shall reflect the measurement capability required to maintain the weapon system and shall not be a list of the characteristics of a specific item of ETE. Parameter values may consist of range, point value, and/or accuracy as annotated in MIL-STD-2121A(NAVY). When weapon system accuracy requirements vary with range, minimum required accuracy figures shall be designated for each range. for those parameters not required by the weapon system, an "N/A" shall be entered.

10.2.10.4 Recommended ETE parameter values (Block 10d. The actual parameter values of the recommended ETE (Block 7) shall be detailed in Block 10d. Only those parameters having parameter values detailed in Block 10c shall be addressed. When weapon system accuracy requirements vary with operating range, required ETE accuracy figures shall be designated for each applicable range.

10.2.10.5 Special requirements (Block 10e). If it is determined that there are special requirements applicable to any particular parameter, this shall be indicated in Block 10e. A detailed explanation shall be provided in the Block 12.

10.2.10.6 Operating Conditions (Block 10f). The operating conditions and/or environmental constraints applicable to the ETE for support of the weapons systems shall be specified in Block 10f. The applicable equipment Type, Class and Style as specified in MIL-T-28800D may be inserted to indicate required ETE environmental/operating characteristics.

Check the source to verify that this is the current version before use.

Block 10. PREPARATION INSTRUCTIONS (Con't)

10.2.10.7 Calibration Interval (Block 10g). The recommended ETE calibration interval, in months, shall be specified in Block 10g.

10.2.10.8 Features (Block 10h). Recommended physical features of the ETE shall be specified in Block 10h. Features shall be selected from Appendix B of MIL-STD-2121A(NAVY).

10.1.11 Notes. Any clarification of a parameter or parameter value shall be detailed in Block 11. Use the sequence number of the parameter(s) to identify the notes(s).

10.2.12 Special requirements. Any limitations shall be detailed in Block 12. A numerical notation shall be entered on the appropriate line of Block 10e and corresponding definition shall be entered Block 12.

10.2.13 Additional parameters. Any additional parameters required by the weapon system, but not indicated in MIL-STD-2121A(NAVY) for the selected noun name shall be detailed in Block 13.

10.3 Weapon system parameter requirements for unspecified ETE. ETE which is not listed in Appendix C of MIL-STD-2121A(NAVY) shall be identified on NAVSEA 9491/4.

10.3.1 Weapon system nomenclature. The AN nomenclature or the CAGE and model number shall be indicated in Block 1.

10.3.2. Weapon system contract number. The contract number of the weapons systems shall be indicated in Block 2.

10.3.3. Weapon system source document number. The source document number used to identify the measurement requirement (for example: Technical manual publication number) shall be indicated in Block 3.

10.3.4 Level of maintenance. The maintenance level shall be indicated by placing an "X" on the appropriate maintenance level space provided in Block 4. An "NA" shall be entered for all inapplicable levels.

10.3.5 ETE noun name. The noun name of the ETE, Block 5, shall have an "NA" entered when recommending unspecified ETE.

10.3.6 ETE generic code. The ETE generic code, Block 6, shall have an "NA" entered when recommending unspecified ETE.

Block 10. PREPARATION INSTRUCTIONS (Con't)

10.3.7 Recommended unspecified ETE CAGE and model number. The CAGE and model number of a specific item of ETE known to be capable of meeting or exceeding the requirements of the weapon system for the selected ETE noun name shall be entered in Block 7.

10.3.8 Recommended unspecified ETE classification. The classification of the ETE in Block 7 is to be specified in Block 8. An "X" shall be indicated in the appropriate space.

10.3.9 Recommended unspecified ETE ICP number and ICP source. The identification number of an approved ICP if it exists for the recommended ETE shall be indicated in Block 9. If the existing procedure is an approved Navy procedure, "NAVY" shall be entered in the "source" space of Block 9. If the ICP is other than an approved Navy ICP, the ICP identification number and source shall be entered.

10.3.10 ETE capability requirements. The ETE capability requirements of the weapon system shall be indicated in Block 10.

10.3.10.1 Unspecified ETE parameter. The weapon system parameters requiring quantitative values (for example, frequency) shall be identified in Block 10a.

10.3.10.2 Unspecified ETE units. The basic unit of measure necessary for each parameter shall be assigned in the appropriate line of Block 10b. Prefixes may be added to the basic unit.

10.3.10.3 Unspecified ETE parameter values required by weapon system. The parameter values shall be specified in Block 10c. They shall reflect the measurement parameters for the ETE required to maintain the weapon system and shall not be a list of the characteristics of a specific item of ETE.

10.3.10.4 Recommended unspecified ETE parameters. The actual parameter values of the recommended maintenance ETE (Block 7) shall be detailed in Block 10a. Only those parameters having parameter values detailed in Block 10c shall be addressed.

10.3.10.5 Special requirements for unspecified ETE. Any limitations shall be detailed in Block 10c. A numerical notation shall be entered in Block 10c, and a corresponding definition shall be entered in Block 12.

10.3.10.6 Operating conditions for unspecified ETE. The operating conditions and/or environmental constraints applicable to the ETE for support of the weapons system shall be specified in Block 10f. The applicable equipment Type, Class, and Style as specified in MIL-T-28800D may be inserted to indicated to required ETE environmental/operating characteristics.

Block 10. PREPARATION INSTRUCTIONS (Con't)

10.3.10.7 Calibration interval for unspecified ETE. The recommended ETE calibration interval, in months, shall be specified in Block 10g.

10.3.10.8 Features. Recommended physical features of the ETE shall be specified in Block 10h. Where applicable, features shall be selected from Appendix B of MIL-STD-2121A(NAVY).

10.3.11 Notes. Any clarification of a parameter shall be detailed in Block 11. Use the line identification of the parameter to identify the note.
