TIER I ADOPTION NOTICE

Command, Control, Communications, Computers, Cyber, Intelligence, Surveillance and Reconnaissance (C5ISR) / Electronic Warfare (EW) Modular Open Suite of Standards (CMOSS) Interoperability Requirements Specification (IRS) Version 1.3 (CMOSS-IRS-V1.3) was adopted on 31 MAY 2026 for use by the Department of War (DoW). Proposed changes by DoW activities must be submitted to the DoW Adopting Activity: MOSA Chief Engineer, MOSA Management Office, U.S. Army Transformation and Training Command (T2COM), Futures and Concepts Command (FCC), Combat Capabilities Development Command (DEVCOM), C5ISR Center. Information regarding this technical standard, including copies of the latest published revision, may be obtained electronically from https://sam.gov/opp/d9bd12398f1d4791855dba898e3d69ec/view. To gain access to some documents, users must Sign Up for accounts with System for Award Management (SAM.gov) and Login.gov, and Register for an entity role.

The CMOSS IRS clarifies the minimum viable set of Standard Requirements for ensuring on-platform and/or human-portable interoperability and recomposability of DoW C5ISR, EW, Position Navigation and Timing (PNT) components, subsystems and systems. It articulates the DoW's common Modular Open Systems Approach for packaging, integrating and operating defense C5ISR, EW, PNT, and related technologies. CMOSS incorporates widely supported, consensus-based, nonproprietary standards for key modular systems interfaces (e.g. SOSA®, FACE™, ANSI/VITA, etc.) wherever possible, and Government standards, by-exception, only where absolutely required. Where multiple options exist within the consensus-based standards, the CMOSS IRS provides clarification by selecting a particular Government consensus-based option for the purpose of ensuring interoperability and compatibility. While purely commercial implementations may elect different Standards-permitted options for key modular systems interfaces, implementations driven by military and/or dual-use business cases benefit from complying specifically with the CMOSS IRS. Architectures and implementations complying with the CMOSS IRS are expected to:

- Facilitate interoperability and compatibility
- Reduce development cycle time and cost
- Reduce systems integration cost and risk
- Increase commonality, recomposability and reuse
- Reduce sustainment and modernization cost
- Support capability evolution and mitigate obsolescence
- Accelerate technology transition
- Isolate the effects of change
- Enable a previously-used hardware marketplace, extending useful life and ROI of components

Custodians:
Army – CR6

Adopting Activity:
Army – CR6
(Project MOSS-2025-002)

Reviewing Activities:
Army – AV, MI, AC
Navy – CG, CH, EC, MC, NM, SA
Air Force – 10, 11, 19, 20, 27
DLA – GS
OSW – SE
