MILITARY SPECIFICATION

JACKET, FLYER'S, LIGHTWEIGHT, (EXPANDABLE WRISTS AND WAIST)

This specification is approved for use by the Natick Research, Development, and Engineering Center, Department of the Army, and is available for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This specification covers a self-lined jacket made of a high temperature resistant aramid oxford cloth.

1.2 Classification. The jacket shall be of one type in the following sizes as specified (see 6.2).

Schedule of sizes

X-Small	Short	Regular	Long
Small	Short	Regular	Long
Medium	Short	Regular	Long
Large	Short	Regular	Long
X-Large	Short	Regular	Long

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be used in improving this document should be addressed to: U.S. Army Natick Research, Development, and Engineering Center, Natick, MA 01760-5014 by using the Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

AMSC N/A FSC 8415

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

(Unless otherwise indicated, copies of federal and military specifications, standards, and handbooks are available from the Standardization Documents Order Desk, Bldg. 4D, 700 Robbins Avenue, Philadelphia, PA 19111-5094.)

2.2 Non-Government publications. The following documents form a part of this document to the extent specified herein. Unless otherwise specified, the issues of the documents which are DoD adopted are those listed in the issue of the DODISS cited in the solicitation. Unless otherwise specified, the issues of documents not listed in the DODISS are the issues of the documents cited in the solicitation (see 6.2).

AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM)

D 3951 - Standard Practice for Commercial Packaging

(Application for copies should be addressed to the American Society for Testing and Materials, 1916 Race Street, Philadelphia, PA 19102-1187.)

THE COLOR ASSOCIATION OF THE UNITED STATES

Standard Color Card of America

Department of Defense Standard Color Card for Sewing Threads

(Color cards may be available from the Color Association of the United Sates, 343 Lexington Avenue, New York, NY 10016-0927. If color cards are not available from the Color Association, individual color samples may be obtained from the contracting activity or as directed by the contracting activity.)

(Non-Government standards and other publications are normally available from the organizations that prepare or distribute the documents. These documents also may be available in or through libraries or other informational services.)

2.3 Order of precedence. In the event of a conflict between the text of this document and the references cited herein, the text of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 First article. When specified (see 6.2), a sample shall be subjected to first article inspection (see 6.3) in accordance with 4.3.

3.2 Guide sample. Guide samples, when furnished, are solely for guidance and information to the contractor (see 6.4). Variations from this specification may appear in the sample, in which case this specification shall govern.

3.3 Materials. It is encouraged that recycled material be used when practical as long as it meets the requirements of this specification.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:00Z
Check the source to verify that this is the current version before use.

3.3.1 Basic material. The basic material shall be 6.0 ounce high temperature resistant, aramid oxford cloth conforming to MIL-C-43842. The color shall be Olive Green 106.

3.3.2 Knit wrist cuffs and waistband material.

3.3.2.1 Wrist cuffs. The knit wrist cuffs shall be Olive Green 106 and shall conform to type IV, class 2 of MIL-C-3735.

3.3.2.2 Waistband. The knit waistband shall be Olive Green 106 and shall conform to type IV, class 3 of MIL-C-3735.

3.3.3 Fastener tapes. The nylon fastener tapes shall be Green, Shade 3421 and shall conform to type I, class 2, 1 inch and 5/8 inch widths of MIL-F-21840. Nylon tape, 1-1/2 inches wide may be substituted for the 5/8 inch tape.

3.3.4 Tape, aramid. The tape for hanger loops and for slide fastener thongs shall conform to MIL-T-43709.

3.3.5 Cord. The cord beading used for welts of front opening shall conform to type I, No. 18 of T-T-881.

3.3.6 Thread.

3.3.6.1 Thread, aramid. The aramid thread shall conform to type I, sizes B and E of MIL-T-43636, dyed Olive Drab S-1, C.A. 66022. As an alternate, thread sizes T-60 and T-90 conforming to MIL-T-83193 or sole thread size T-35 conforming to MIL-T-44100 may be respectively substituted to replace the size B and E of MIL-T-43636 threads.

3.3.6.2 Thread, polyester core. Cotton-, rayon-, or polyester-covered polyester core thread conforming to ticket No. 50, 2-ply of MIL-T-43548 may be used as an alternate thread for bartacking. The thread shall be dyed Olive Drab S-1, C.A. 66022 and shall show fastness to laundering equal to or better than the standard sample. When no sample is available, the thread shall show "good" fastness to laundering.

3.3.7 Fasteners, slide. The slide fasteners shall be brass with a black chemical finish, and shall conform to V-F-106.

3.3.7.1 Front. The fastener for the jacket front shall conform to type IV, style 8, size M, short tab pull, with the chain of the following lengths in inches :

Size	Short	Regular	Long
X-Small	19	20	21
Small	19-1/2	20-1/2	21-1/2
Medium	20	21	22
Large	20-1/2	21-1/2	22-1/2
X-Large	21	22	23

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:00Z
Check the source to verify that this is the current version before use.

3.3.7.2 Pencil and utility pocket. The fastener for the pencil and utility pocket shall conform to type I, style 7, size M, short tab pull, 4-3/4 inch chain.

3.3.7.3 Slide fastener tape. The slide fastener tape shall be made of a aramid nylon tape, shade S, Cable No. 66519, and shall show "good" fastness to laundering. Color matching of the fastener tape under incandescent lamplight at 2300 ± 100K shall be exempt.

3.3.8 Resinous sealer. The material for dipping the ends of slide fastener thongs (see operation 1.c) to prevent fraying, shall be a colorless, non-combustible resin (see 6.5). As an alternate the ends may be cut by hot wire or a hot bladed strip cutter.

3.3.9 Labels. Each jacket shall have (a) a class 1 identification label, a class 2 size label, and a class 3 instruction label; (b) a class 2 size label and a class 15 combination identification and instruction label; or (c) a combination of the class 1 identification and class 2 size labels and a class 3 instruction label conforming to type VI of DDD-L-20. The labels shall show fastness to laundering. When a combination identification-instruction label is used, the item nomenclature shall not be repeated. The size label shall contain the following information for each respective size. Description information shall be printed in letters and numerals not less than 10-point and as follows:

X-Small - Short	X-Small - Regular	X-Small - Long
Chest: Up to 33 inches Height: Up to 67 inches Stock No.: NATO size: 6070/7484	Chest: Up to 33 inches Height: 67 to 71 inches Stock No.: NATO size: 7080/7484	Chest: Up to 33 inches Height: 71 inches up Stock No.: NATO size: 8090/7484

The instruction label shall contain the following information:

JACKET, FLYER'S: LIGHTWEIGHT, (EXPANDABLE WRISTS AND WAIST)

This jacket is of low flammability. No other special flame resistant treatments are required.

1. The jacket can be machine washed or dry cleaned in accordance with established procedures. Jacket may be hand laundered; make sure soap is thoroughly rinsed out.

2. WARNING: Launder with slide fasteners and hook and loop fasteners closed. Do not press hook and loop fasteners. After 10 laundering cycles and thereafter, launder in accordance with Formula IX (no bleach) of TM 10-280, field laundry and Natick Formula X, fixed laundry for the retreatment of anti-static agent.

3. DO NOT STARCH. Starch will burn. If starched, thorough laundering will return this garment to its fire retardant condition.

4. Color fading does not diminish the flame retardant properties of this garment

DO NOT REMOVE THIS LABEL

3.4 Design. The jacket is single breasted with a front slide fastener closure. Jacket has a collar with tab closure and diagonal side pockets with flaps with hook and loop closure. The left sleeve has a utility and pencil pocket. The cuffs and waistband are rib knit. Jacket is fully self-lined.

3.4.1 Figure. Figure 1 is furnished for information purposes only. To the extent of any inconsistencies between the written specification and the figure, the written specification shall govern.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:00Z
Check the source to verify that this is the current version before use.

3.5 Patterns. Standard patterns which provide a 1/2 inch seam allowance for double-lapped, double-stitched seams attaching cuffs to sleeve and attaching waistband to jacket and 3/8 inch for all other seams will be furnished by the Government. The standard patterns shall not be altered in any way and are to be used for cutting contractor's working patterns. The working patterns shall be identical to the standard patterns.

3.5.1 List of pattern parts. The component parts of the jacket shall be cut from materials specified in accordance with the number of parts indicated in table I.

TABLE I. List of pattern parts

Material	Nomenclature	Cut parts
6 oz. aramid nylon oxford	Front	2
	Back	1
	Collar (top collar and interlining)	2
	Undercollar	1
	Neck tab	2
	Top sleeve	2
	Undersleeve	2
	Pocket	4
	Welt	2
	Utility pocket	1
	Pencil pocket upper	1
	Pencil pocket lower	1
	Slide fastener cover	1
	Front facing	2
	Front extension	2
	Front lining	2
	Back lining	1
	Top sleeve lining	2
	Undersleeve lining	2
	Pocket flap	2

3.6 Construction.

3.6.1 Stitches, seams and stitching. Stitch, seam and stitching types specified in table II shall conform to FED-STD-751. Where two or more seam or stitch types are given for the same part of an operation, any one of them may be used. Where stitch type 401 is used, the looper (underthread) shall be on the inside of the jacket. The gage of stitching on double lapped and double stitched seams shall be 1/4 to 5/16 inch, but the same gage shall be used on all double stitched seams throughout the jacket. The gage of stitching for safety stitch construction shall be 3/8 inch . The guides and knives on the safety stitch machines shall be set to trim only the ravelled ends of the fabric. Seam

Check the source to verify that this is the current version before use.

allowances shall be maintained with seams sewn so that raw edges, runoffs, twists, pleats or puckers will not result. All seams shall start and finish evenly. Thread tension shall be maintained so that there is no tight or loose tension. Seams required to be worked out having a depth between the fold of 1/16 inch or more shall be considered a defect.

3.6.1.1 Type 301 stitching. Ends of all stitching shall be backstitched or overstitched not less than 1/4 inch except where ends are turned under or caught in other seams or stitching. Ends of a continuous line of stitching shall be overlapped not less than 1/2 inch except on labels where a minimum of three stitch overlap is required. Thread tensions shall be maintained so that there will be no loose stitching resulting in loose bobbin or top thread or excessively tight stitching resulting in puckering of the materials sewn. The lock shall be imbedded in the materials sewn.

3.6.1.1.1 Repairs of type 301 stitching. Repairs of type 301 stitching shall be as follows:

a. When thread breaks or bobbin run-outs occur during stitching, the stitching shall be repaired by restarting the stitching a minimum of 1/2 inch back of the end of the stitching. 1/

b. Thread breaks or two or more consecutive skipped or runoff stitches noted during inspection of the item shall be repaired by overstitching. The stitching shall start a minimum of 1/2 inch in back of the defective area, continue over the defective area a minimum of 1/2 inch beyond the defective area onto the existing stitching. Loose or excessively tight stitching shall be repaired by removing the defective stitching without damaging the materials and restitching in the required manner. When damaged thread has been removed, needle holes do not constitute damage to the material. 1/

1/ When making the above repairs, the ends of the stitching are not required to be backstitched.

3.6.1.2 Type 401, 503, 504, 515, 516, and 519 stitching. Thread tension shall be maintained so that there will be no loose stitching. All repairs shall be in accordance with 3.6.1.1.1a and 3.6.1.1.1b. Repairs to stitch type 401 may be accomplished by use of stitch type 301.

3.6.2 Stitches per inch. The minimum and maximum number of stitches per inch shall be as specified in table II.

3.6.3 Bartacks. Bartacks shall measure 1/2 ± 1/16 inch long and be free from thread breaks and loose stitching.

3.6.4 Thread ends. All thread ends that are visible on the finished jacket shall be trimmed to a length of not more than 1/4 inch.

Check the source to verify that this is the current version before use.

3.6.5 Repairs. Repairs such as mends, darns, patches or splices are not permitted on the jacket.

3.6.6 Use of automated apparel equipment. Automated apparel equipment may be used to perform any of the operations specified in table II providing that the seam and stitch type are as specified and the finished component conforms to the required configuration. When a government finished shaper pattern is furnished, the component shall conform to that pattern.

3.7 Manufacturing operations requirements. The jacket shall be made in accordance with the operation requirements specified in table II. The contractor is not required to follow exact sequence of operations listed, unless otherwise specified. Any additional basting or holding stitches used to facilitate manufacture are permissible, provided the thread does not show on the finished garment.

					NEEDLE	BOBBIN/ LOOPER	COVER
1.	Cutting. a. Cut the jacket parts in strict accordance with the patterns which show size, shape, directional lines and placement of pockets for proper assembly. b. Cut the component parts out of one piece of material except the undercollar, collar interlining, neck tab, front pockets and sleeve linings which may be cut from ends. Parts cut from ends shall approximate the shade of the jacket. c. Cut the tape for slide fastener thongs of sufficient length to measure 2-1/2 to 3 inches (folded) when attached to slide fastener (see operation 4). Cut the tape for hanger loops 4-1/4 to 4-1/2 inches long. Sear or dip raw ends of each fastener thong. d. Cut hook and loop tapes in accordance with the following: (1) Four 5/8 inch hook and loop tapes 1-1/2 inches long for front pockets, or four 1-1/2 inch hook and loop tapes 5/8 inch long, as applicable. (2) Two 1 inch hook and loop tapes 1 inch long for neck tab and collar (see operations 9 and 10).

NO.	MANUFACTURING OPERATIONS REQUIREMENTS	STITCH TYPE	SEAM AND STITCHING TYPE	STITCHES PER INCH	THREAD		
					NEEDLE	BOBBIN/ LOOPER	COVER
1.	Cut jacket. (cont'd)						
	e. Cut the cord beading for front opening 1/2 inch longer than the slide fastener chains (see 3.3.7.1).						
	f. Cut the knit waistband (one each jacket) of sufficient length to comply with the finished waistband length requirements of operation 18f, and in the following widths:						
	X-Small 24 inches Small 25 inches Medium 26 inches Large 27 inches X-Large 28 inches						
2.	Replacement of defective components.						
	During the spreading, cutting and manufacturing process, components having material defects or damages that are classified as defects in paragraph 4.4.2 shall be removed from production and replaced with non-defective and properly matched components.						
3.	Marking.						
	a. Mark, ticket, or bundle all parts except those parts cut from ends to assure a uniform size and shade throughout the jacket.

11.	Make and attach utility and pencil pocket.						
	a. Turn outer edge of slide fastener cover under 1/2 inch. Turn inner edge under 7/8 inch, enclosing other turned edge. Position slide fastener on underside of cover, with edge of chain even with the folded edge of the 7/8 inch fold (inner edge) and stitch tape to cover with two rows of stitching 1/4 to 5/16 inch gage with the back row 1/16 to 3/32 inch from edge of fastener tape. Bridge of slide fastener shall finish toward top of sleeve.	301	LSbj-2	10-12	E	E	
	b. Turn under top raw edge of upper pencil pocket 1/4 inch and hem. Turn under top raw edge of lower pencil pocket 1/4 inch and hem. Both hems shall measure 1/4 ± 1/16 inch.	301 301	EFb-1 EFb-1	10-12 10-12	B B	B B	
	c. Position top edge of lower pencil pocket to bottom of upper pencil pocket as indicated by marks on pattern. Turn under side and bottom edges of the combined pencil pocket and stitch to the utility pocket as indicated by marks on pattern.	301	LSd-1	10-12	E	E	
	d. Place a vertical row of stitching through the center (1/8 inch off center tolerance) of upper and lower pencil pockets. Stitching shall be through all plies, forming two compartments in each pencil pocket.	301	SSv-1	10-12	B	B

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection requirements (examinations and tests) as specified herein. Except as otherwise specified in the contract or purchase order, the contractor may use his own or any other facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the Government. The Government reserves the right to perform any of the inspections set forth in this specification where such inspections are deemed necessary to assure supplies and services conform to prescribed requirements.

4.1.1 Responsibility for compliance. All items shall meet all requirements of sections 3 and 5. The inspection set forth in this specification shall become a part of the contractor's overall inspection system or quality program. The absence of any inspection requirements in the specification shall not relieve the contractor of the responsibility of ensuring that all products or supplies submitted to the Government for acceptance comply with all requirements of the contract. Sampling inspection, as part of manufacturing operations, is an acceptable practice to ascertain conformance to requirements, however, this does not authorize submission of known defective material, either indicated or actual, nor does it commit the Government to accept defective material.

4.1.2 Responsibility for dimensional requirements. Unless otherwise specified in the contract or purchase order, the contractor is responsible for ensuring that all specified dimensions have been met. When dimensions cannot be examined on the end item, inspection shall be made at any point, or at all points in the manufacturing process necessary to assure compliance with all dimensional requirements.

4.1.3 Certificate of compliance. When certificates of compliance are submitted, the Government reserves the right to inspect such items to determine the validity of the certification.

4.2 Classification of inspections. The inspection requirements specified herein are classified as follows:

a. First article inspection (see 4.3).
b. Quality conformance inspection (see 4.4).

4.3 First article inspection. When a first article is required (see 3.1 and 6.2), it shall be examined for the defects specified in 4.4.2 and 4.4.3.

4.4 Quality conformance inspection. Unless otherwise specified, sampling for inspection shall be performed in accordance with MIL-STD-105.

4.4.1 Component and material inspection. In accordance with 4.1, components and materials shall be inspected in accordance with all the requirements of referenced documents unless otherwise excluded, amended, modified or qualified in this specification or applicable purchase document.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:00Z
Check the source to verify that this is the current version before use.

4.4.2 End item visual examination. The end items shall be examined for the defects listed in table IV. The lot size shall be expressed in units of jackets. The sample unit shall be one jacket. The inspection level shall be II and the acceptable quality level (AQL), expressed in terms of defects per hundred units, shall be 2.5 for major defects, 15 for major and minor A combined defects, and 40 for total (major, minor A and minor B combined) defects.

TABLE IV. End item visual defects

Examine	Defects	Classification Major	Minor A	Minor B
Material defects and damages	Hole, cut, tear, or needle chew:			
	- On outside	101		
	- On inside	102		
	Mend, darn, patch (in diameter or length:			
	- On outside	103		
	- On inside:			
	- 1/4 to 1/2 inch, inclusive			301
	- more than 1/2 inch		201	
	Friction burn:			
	- When fibers are broken, use classification "a" above			
	- When fibers are not broken, more than 1/4 inch in length			302
	Drill hole exposed on outside			303
	Weakening defects:			
	- Smash	104		
	- Multiple float or loose slub:			
	- On outside		202	
	- On inside			304
	- Unsightly slub or shade bar:			
	- On outside		203	
	- On inside			305
Material defects: Cuffs and waistband	Any hole, cut, or tear	105		
	Run or dropped stitch	106		
	Abrasion mark resulting in a weak area	107		
	Not specified size	108		
Shaded parts	Shaded part (excluding undercollar, neck tab, front pocket pieces and sleeve linings		204

TABLE IV. End item visual defects (cont'd)

Examine	Defects	Classification Major	Minor A	Minor B
Cleanness	Any spot or stain on outside			306
	Thread end not trimmed, or loose threads not removed throughout jacket			307
	One or more shade markings not removed			308
	Shade marking visible on outside			309
Component and assembly	Any component part or required operation omitted (unless otherwise classified herein)	109		
	Any operation not performed as specified (unless otherwise classified herein)			310
Cutting	Any component part not cut in accordance with directional lines as indicated by marks on pattern or not cut in accordance with document requirements	110		
Seams and stitching	Accuracy of seaming:			
	- Seam twisted, puckered, or pleated		205	
	- Part of jacket caught in unrelated operation or stitching	111		
	- End of stitching, when not caught in other seam or stitching backtacked less than 1/4 inch			311
	- Thread break (all stitch types) stitched less than 1/2 inch beyond each end of break		206	
	- Ends of a continuous line of stitching overlapped less than 1/2 inch on all seams except label stitching, or less than 3 stitches on labels			312
	Gage of stitching and seam allowance:			
	- Irregular, i.e., unevenly gaged, or corresponding stitching not uniform (to be scored only where condition exist along major portion of seam)		207

TABLE IV. End item visual defects (cont'd)

Examine	Defects	Classification Major	Minor A	Minor B
Seams and stitching - cont'd	- Not width specified or not within range of gage specified or varies more than 1/16 inch when no range is specified		208	
	- Edge or raised stitching sewn too close to edge, resulting in damage to cloth	112		
	Open seam (stitches skipped, broken, or missing)			
	- Any seam open by:			
	- up to 1/4 inch inclusive			313
	- more than 1/4 up to 1 inch inclusive		209	
	- more than 1 inch	113		
	Raw edge:			
	- 1/8 up to 1/4 inch inclusive			314
	- more than 1/4 up to 1 inch inclusive		210	
	- more than 1 inch	114		
	Any raw edge caused by omission of overedge stitching for a distance of 3 inches or more		211	
	Runoffs (on edge or raised stitching):			
	- 1/4 up to 1/2 inch inclusive			315
	- more than 1/2 inch		212	
	Seam and stitch type:			
	- Seam or stitch type not as specified	115		
	- Looper thread of 401 stitch type on joining seam finishing on outside of seam	116		
	Stitch tension:			
	- Loose tension resulting in a loose seam	117		
	- Loose tension on raised or edge stitching		213	
	- Tight tension (stitches break when strain is applied in direction of seam or stitching)	118

TABLE IV. End item visual defects (cont'd)

Examine	Defects	Classification Major	Minor A	Minor B
Seams and stitching - cont'd	Stitches per inch (except on labels (to be scored only when the condition exists on the major portion of the seam):			
	- more than the maximum specified or less than the minimum specified		214	
	Stitches per inch less than the minimum specified on labels			316
	Stitches, skipped, broken, or missing on edge or raise stitching:			
	- up to 1 inch inclusive			317
	- more than 1 inch		215	
Bartacks	One or more omitted, or misplaced, not serving intended purpose (unless otherwise classified herein)		216	
	Not specified size			318
Slide fastener	Defective, affecting function	119		
	Not type or size specified		217	
	Slide fastener tape cut or frayed	120		
	Thong missing			319
	Thong not specified size			320
	Slide fasteners attached with less than two rows of stitching through length of tape (each side)	121		
	End of thong not dipped or seared		218	
	End of thong frays when tugged at			321
Collar	Fullness or puckers on top collar		219	
	Tight at joining to neck seam, causing puckers or pleats on front or back		220	
	Side ends not properly worked out, having a fold of more than 1/8 inch		221	
	Twisted	122		
	Points at ends of collar uneven in length by 3/8 inch or more, or not uniform in shape		222	
	Collar tab not finished flat		223	
	Fastener misplaced, not serving intended purpose		224

TABLE IV. End item visual defects (cont'd)

Examine	Defects	Classification Major	Minor A	Minor B
Collar - cont'd	Fastener not specified size			322
Hanger loop	Missing or misplaced		225	
	Not specified size			323
Fronts	Uneven at bottom by 1/2 inch or more or at top by 1/4 inch or more when closed		226	
	Fastener tape set too loosely or too tight, causing distortion on tapes or front	123		
	Top end of tape not caught in collar joining seam	124		
	Cord edge of front opening overlapping by more than 1/8 inch or the distance between cord edges of opening greater than 1/8 inch when fastener is closed		227	
	Cording at edges not extending the full length of the opening		228	
Front pockets	Pockets or flaps out of alignment by 1/4 inch or more		229	
	Welts or flaps not uniform in length by more than 1/4 inch		230	
	Hook or loop fastener not specified size		231	
	Fastener part missing	125		
	Welt not smooth and flat when pocket is closed			324
	Hook or loop portions of fastener tape not positioned as specified	126		
	Flaps not positioned as specified		232	
Utility and pencil pocket	Pocket set on crookedly		233	
	Fastener bridge not at top	127		
	Edge of pocket pleated or twisted in stitching		234	
	Edge of slide fastener tape extending beyond edge of pocket by 1/8 inch or more	128		
	Pencil pocket compartments uneven in width by more than 1/4 inch		235

TABLE IV. End item visual defects (cont'd)

Examine	Defects	Classification Major	Minor A	Minor B
Sleeves	Reversed	129		
	Sleeve or body of shirt puckered or pleated at armhole		236	
	Bottom of sleeve twisted	130		
	Armhole seam not raise stitched at shoulder		237	
	Cuff not specified size		238	
Direction of seams	Fronts not lapped on back at shoulder or at side			325
	Front sleeve not lapped on back sleeve			326
Waistband	Not specified size	131		
Labels	Missing, incorrect, or illegible: - size, or combination size and identification (when applicable)	132		
	- identification, instruction, or combination (when applicable)		239	
	Not stitched on all four sides		240	
	Stitching through printing		241	
	Size label off center by more than 1/8 inch, or any other label not positioned as specified		242	

4.4.3 End item dimensional examination. The end items shall be examined for conformance to the measurements specified in table III. Any measurement deviating from the specified requirement and sleeves uneven in length by 3/4 inch or more shall be classified as defects. The lot size shall be expressed in units of jackets. The sample unit shall be one jacket. The inspection level shall be S-3 and the AQL, expressed in terms of defects per hundred units, shall be 4.0.

4.4.4 Packaging examination. The fully packaged end items shall be examined for the defects listed below. The lot size shall be expressed in units of shipping containers. The sample unit shall be one shipping container fully packaged. The inspection level shall be S-2 and the AQL, expressed in terms of defects per hundred units, shall be 2.5.

Examine	Defect
Marking (exterior and interior)	Omitted; incorrect; illegible; of improper size, location, sequence, or method of application
Materials	Any component missing, damaged, or not as specified
Workmanship	Inadequate application of components, such as: incomplete sealing or closure of flap, improper taping, loose strapping or inadequate stapling Bulged or distorted container
Content	Number of jackets per container is more or less than required Size shown on one or more jackets not as specified on shipping container 1/

1/ For this defect, one shipping container in the sample shall be examined.

4.4.5 Palletization examination. The fully packaged and palletized end items shall be examined for the defects listed below. The lot size shall be expressed in units of palletized unit loads. The sample unit shall be one palletized unit load, fully packaged. The inspection level shall be S-1 and the AQL, expressed in terms of defects per hundred units, shall be 6.5.

Examine	Defect
Finished dimension	Length, width, or height exceeds specified maximum requirement
Palletization	Pallet pattern not as specified Interlocking of loads not as specified Load not bonded as specified
Weight	Exceeds maximum load limits
Marking	Omitted, incorrect; illegible; of improper size, location, sequence, or method of application

5. PACKAGING

5.1 Preservation. Preservation shall be level A or Commercial, as specified (see 6.2).

5.1.1 Level A preservation. Each jacket, with slide fasteners closed, shall be neatly folded to measure approximately 23 inches in length by 14-1/2 inches in width. Each folded jacket shall be inserted in a close-fitting clear polyethylene film bag conforming to A-A-50083.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:00Z
Check the source to verify that this is the current version before use.

5.1.2 Commercial preservation. The jacket shall be preserved in accordance with ASTM D 3951.

5.2 Packing. Packing shall be level A, B or Commercial, as specified (see 6.2).

5.2.1 Level A packing. Fifteen jackets of one size only, preserved as specified in 5.1, shall be packed in a snug-fitting fiberboard shipping container conforming to style RSC-L, grade V2s of PPP-B-636. The inside of each shipping container shall be fitted with a box liner conforming to type CF, class weather-resistant, variety DW, grade V15c of PPP-B-636. Level A unit packs shall be packed flat fifteen in depth within a shipping container. Inside dimensions of each shipping container shall approximate 23-1/2 inches in length, 15 inches in width, and 15 inches in depth. Approximate dimensions are furnished as a guide only. Each shipping container shall be closed in accordance with method III, waterproofed in accordance with method V, and reinforced as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.4. Shipping containers shall be arranged in unit loads in accordance with MIL-L-35078 for the type and class of load specified (see 6.2). Strapping shall be limited to nonmetallic strapping, except for type II, class F loads.

5.2.2 Level B packing. Fifteen jackets of one size only, preserved as specified in 5.1, shall be packed in a snug-fitting fiberboard shipping container conforming to style RSC-L, type CF (variety SW) or SF, class domestic, grade 275 of PPP-B-636. The inside of each shipping container shall be fitted with a box liner conforming to type CF, class domestic, variety DW, grade 275 of PPP-B-636. Level A unit packs shall be packed flat, fifteen in depth within a shipping container. Inside dimensions of each shipping container shall approximate 23-1/2 inches in length, 15 inches in width, and 15 inches in depth. Approximate dimensions are furnished as a guide only. Each shipping container shall be closed in accordance with method II as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.4.

5.2.2.1 Weather-resistant fiberboard container. When specified (see 6.2), the shipping containers shall be a grade V3c, V3s, or V4s fiberboard box fabricated in accordance with PPP-B-636 and closed in accordance with method III as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.4.

5.2.3 Commercial packing. Jackets, preserved as specified in 5.1, shall be packed in accordance with ASTM D 3951.

5.3 Palletization. When specified (see 6.2) jackets, packed as specified in 5.2.2 and 5.2.3, shall be palletized on a 4-way entry pallet in accordance with load type Ia of MIL-STD-147. Pallet types shall be type I (4-way entry), type IV or type V in accordance with MIL-STD-147. Pallets shall be fabricated from wood groups I, II, III or IV of MIL-STD-731. Each prepared load shall be

Check the source to verify that this is the current version before use.

bonded with primary and secondary straps in accordance with bonding means C and D or film bonding means F or G. Pallet pattern shall be number 3 in accordance with the appendix of MIL-STD-147. Interlocking of loads shall be effected by reversing the pattern of each course.

5.4 Marking. In addition to any special marking required by the contract or purchase order, unit packs, shipping containers and palletized unit loads shall be marked in accordance with MIL-STD-129 or ASTM D 3951, as applicable.

5.4.1 Polyethylene bagged unit packs. Polyethylene bagged unit packs shall have the required identification information legibly printed or stamped in black directly on the bag across the center face or on a white paper label inserted within the bag so as to permit ready identification.

6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

6.1 Intended use. The jacket is intended for wear by Military personnel of the Department of Defense as part of the aviation crewman's clothing.

6.2 Acquisition requirements. Acquisition documents must specify the following:

a. Title, number, and date of this specification.
b. Size required (see 1.2).
c. Issue of DODISS to be cited in the solicitation, and if required, the specific issue of individual documents referenced (see 2.1.1 and 2.2).
d. When a first article sample is required (see 3.1, 4.3 and 6.3).
e. Levels of preservation and packing (see 5.1 and 5.2).
f. Type and class of unit load required (see 5.2.1).
g. When weather-resistant grade fiberboard shipping containers are required for level B packing (see 5.2.2.1).
h. When palletization is required (see 5.3).

6.3 First article. When a first article is required, it shall be inspected and approved under the appropriate provisions of FAR 52.209. The first article should be a preproduction sample. The contracting officer should specify the appropriate type of first article and the number of units to be furnished. The contracting officer should also include specific instructions in acquisition documents regarding arrangements for selection, inspection, and approval of the first article.

6.4 Sample and shade samples. For access to sample of the end item and shade samples, address the contracting activity issuing the invitation for bids or request for proposal.
