MILITARY SPECIFICATION

JACKETS, COLD WEATHER, (HIGH TEMPERATURE RESISTANT)

This specification is approved for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This specification covers jackets made of a high temperature resistant aramid oxford fabric and lined with high temperature resistant aramid quilted batting for wear in cold weather conditions.

1.2 Classification. The jackets shall be of the following classes and sizes as specified (see 6.2).

Class 1 - Olive Green 106
Class 2 - Tan 380

Schedule of sizes

X-Small	Short	Regular	Long
Small	Short	Regular	Long
Medium	Short	Regular	Long
Large	Short	Regular	Long
X-Large	Short	Regular	Long

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be used in improving this document should be addressed to: U.S. Army Natick Research, Development and Engineering Center, Natick, MA 01760-5019 by using the Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

AMSC N/A FSC 8415

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

(Non-Government standards and other publications are normally available from the organizations that prepare or distribute the documents. These documents also may be available in or through libraries or other informational services.)

2.3 Order of precedence. In the event of a conflict between the text of this document and the references cited herein, the text of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 First article. When specified (see 6.2), a sample shall be subjected to first article inspection (see 6.3) in accordance with 4.3.

3.2 Guide samples. Samples, when furnished, are solely for guidance and information to the contractor (see 6.4). Variation from this specification may appear in the sample, in which case this specification shall govern.

3.3 Materials. It is encouraged that recycled material be used when practical as long as it meets the requirements of this specification.

3.3.1 Basic material. The basic material shall be 6.0 ounce aramid oxford cloth conforming to MIL-C-43842. The color for class 1 shall be Olive Green 106 and for class 2 shall be Tan 380.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:00Z
Check the source to verify that this is the current version before use.

3.3.2 Armhole extension. The material for the armhole extension piece on the lining shall be 3 ounce aramid cloth conforming to MIL-C-43774. The color for class 1 shall be Olive Green 106 and for class 2 shall be Tan 380.

3.3.3 Lining. The material for the lining shall be aramid quilted batting conforming to MIL-B-81813. The face side of the lining material for class 1 shall be Olive Green 106 and for class 2 shall be Tan 380 with the stitching of the dumbbell pattern having thread to match the basic material. The opposite side for class 1 may be Olive Green 106, natural, or mixed (OG warp - natural filling or natural warp - OG filling) and for class 2 may be Tan 380, natural, or mixed (tan warp - natural filling or natural warp tan filling) and the stitching of the dumbbell pattern shall have natural thread.

3.3.4 Knit wrist cuffs and waistband material.

3.3.4.1 Wrist cuffs. The knit wrist cuffs shall conform to type IV, class 2, size 2 of MIL-C-3735. The color for class 1 shall be Olive Green 106 and for class 2 shall be Tan 380.

3.3.4.2 Waistband. The knit waistband shall conform to type IV, class 3 of MIL-C-3735. The color for class 1 shall be Olive Green 106 and for class 2 shall be Tan 380.

3.3.5 Fasteners, nylon tape. The nylon tape fasteners shall conform to type I, class 2, 1 inch and 5/8 inch widths of MIL-F-21840. Nylon fastener tapes, 1-1/2 inches wide may be substituted for the 5/8 inch wide tape fasteners. The color for class 1 shall be Green 3421 and for class 2 shall be Tan 380.

3.3.6 Aramid tape. The tape for hanger loop shall conform to MIL-T-43709. The color for class 1 shall be Olive Green 106 and for class 2 shall be Tan 380.

3.3.7 Cord. The cord beading used for welts of front opening shall conform to type I, No. 18 of T-T-881.

3.3.8 Thread.

3.3.8.1 Thread, aramid and para-aramid. The thread shall be aramid, sizes B and E conforming to A-A-50195. Para-aramid spun staple thread, size tex 35, conforming to MIL-T-44100 may be used as an alternate to aramid sizes B and E. The color for class 1 shall be Camouflage Green 483 approximating color chip 34094 of FED-STD-595 and for class 2 shall be Tan 380, and shall show fastness to laundering equal to or better than the standard sample. When no standard sample is available, the thread shall show "good" fastness to laundering.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:00Z
Check the source to verify that this is the current version before use.

3.3.8.2 Cotton-covered polyester core thread. Cotton-covered polyester core thread conforming to ticket No. 50, 2 ply of A-A-50199 may be used as an alternate thread for bartacking. The color for class 1 shall be Camouflage Green 483 approximating color chip 34094 of FED-STD-595 and for class 2 shall be Tan 380, and shall show fastness to laundering equal to or better than the standard sample. When no standard sample is available, the thread shall show "good" fastness to laundering.

3.3.9 Fasteners, slide. The slide fasteners shall be brass with a black chemical finish and shall conform to V-F-106.

3.3.9.1 Front. The fastener for the jacket front shall conform to type IV, style 8, size M, short tab pull, with the chain of the following lengths in inches:

	Short	Regular	Long
X-Small	19	20	21
Small	19-1/2	20-1/2	21-1/2
Medium	20	21	22
Large	20-1/2	21-1/2	22-1/2
X-Large	21	22	23

3.3.9.2 Pencil and utility pocket. The fastener for the pencil and utility pocket shall conform to type I, style 7, size M, short tab pull, 4-3/4 inch chain.

3.3.9.3 Slide fastener tape. The slide fastener tape shall be aramid. The color for class 1 shall be shade S, Cable No. 66519, and for class 2 shall be Tan 380. The finished tape shall show colorfastness to light and laundering equal to or better than the standard sample. When no standard sample is available, the tape shall show "fair" fastness to light after 6 standard fading hours and "good" fastness to laundering.

3.3.9.4 Thongs. Each slide fastener shall be furnished with a thong of sufficient length to measure 2-1/2 to 3 inches (folded) when attached to slider pull tab. The thongs shall be 1/4 inch wide conforming to MIL-T-43709. The color for class 1 shall be Olive Green 106 and for class 2 shall be Tan 380. Ends of thongs shall be seared or dipped in a colorless, non-combustible resin (see 6.5). Thongs shall be attached to slider pull tabs as specified in table II, operation 4.

3.3.10 Labels. Each jacket shall have an identification label, a size label, and an instruction label or a combination identification-instruction label or a combination identification-size label, conforming to type VI of DDD-L-20. The fastness to laundering requirements of DDD-L-20 shall apply. The color of the label for class 1 shall be Medium Green, Cable No. 70034, 70130, or 70131 and the color for class 2 shall be Khaki, Cable No. 70188. The fastness to laundering requirements of DDD-L-20 shall apply.

Check the source to verify that this is the current version before use.

3.3.10.1 Identification label. The identification label shall conform to class 1.

3.3.10.2 Size label. The size label shall conform to class 2 and shall contain the following information for each respective size. Descriptive information shall be printed in letters and numerals not less than 10-point and as follows:

X-Small - Short	X-Small - Regular	X-Small - Long
Chest: Up to 33 inches Height: Up to 67 inches Stock No.: NATO size: 6070/7484	Chest: Up to 33 inches Height: 67 to 71 inches Stock No.: NATO size: 7080/7484	Chest: Up to 33 inches Height: 71 inches up Stock No: NATO size: 8090/7484

3.3.10.3 Instruction label. The instruction label shall conform to class 3 and shall contain the following information:

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:00Z
Check the source to verify that this is the current version before use.

JACKET: COLD WEATHER, (HIGH TEMPERATURE RESISTANT)

This jacket is of low flammability.
Flame resistant treatments are not required.

1. For thorough cleaning return to laundry unit for machine washing. Jackets may be hand laundered; make sure soap is thoroughly rinsed out.

2. WARNING: Launder with slide fasteners and hook and loop fasteners closed. Do not press hook and loop fasteners. After 10 laundering cycles and thereafter, launder in accordance with Formula IX (no bleach) of TM 10-280, field laundry and Natick Formula X, fixed laundry for the retreatment of antistatic agent.

3. DO NOT STARCH. Starch will burn. If starched, thorough laundering will return this jacket to its fire retardant condition.

4. Color fading does not diminish the flame retardant properties.

5. It may be necessary to use the next larger size when wearing the full CVC cold weather ensemble.

DO NOT REMOVE THIS LABEL

3.3.10.4 Combination identification-instruction label. The identification label (class 1) and the instruction label (class 3) may be combined into one label. When combined, the item nomenclature shall not be repeated. The combination label shall conform to the requirements of the class 15 label.

3.3.10.5 Combination identification-size label. The identification label (class 1) and the size label (class 2) may be combined into one label.

3.3.11 Webbing. The webbing for the pull tab on the retrieval strap opening shall conform to type II of MIL-W-43685.

3.4 Design. The jacket is single breasted with a front slide fastener closure, with an inside protective flap. The back has a yoke and a retrieval strap opening with hook and loop closure. The jacket has a collar with tab closure and has diagonal side pockets with flaps with hook and loop closure. The left sleeve has a utility and pencil pocket. The cuffs and waistband are rib knit. The sleeves have elbow patches. The jacket is fully lined with quilted batting material. (See figure 1.)

3.4.1 Figure. Figure 1 is furnished solely for guidance and information. Should variation from the written specification appear in the figure, the written specification shall govern.

Check the source to verify that this is the current version before use.

3.5 Patterns. Standard patterns which provide a 1/2 inch seam allowance for double-lapped, double-stitched seams for attaching cuffs to sleeves, joining yoke to back, top and under sleeve elbow patches, and attaching waistband to jacket and 3/8 inch for all other seams, will be furnished by the Government. The standard patterns shall not be altered in any way and are to be used for cutting contractor's working patterns. The working patterns shall be identical to the standard patterns.

3.5.1 List of pattern parts. The component parts of the jacket shall be cut from the specified materials in accordance with pattern parts indicated in table I.

TABLE I. List of pattern parts

Material	Nomenclature	Cut parts
Aramid oxford, 6 oz.	Front	2
	Back	1
	Collar (top collar and interlining)	2
	Undercollar	1

3.6 Construction. The construction shall conform in all respects to the requirements specified in table II and herein.

3.6.1 Stitches, seams, and stitching. All stitches, seams, and stitching shall conform to FED-STD-751. Where two or more seam or stitch types are given for the same part of an operation, any one of them may be used. Seam allowances shall be maintained with seams sewn so that no raw edges, run-offs, twists, pleats, puckers, or open seams will result. All seams shall start and finish evenly. The edge and top stitching shall be uniformly gaged. Seams required to be worked out, that have a depth between the fold of 1/16 inch or more, shall be considered a defect. The gage of stitching on double-lapped and double-stitched seams shall be 1/4 to 5/16 inch, but the same gage shall be used on all double stitched seams throughout the jacket. The gage of stitching for safety stitch construction shall be 3/8 ± 1/16 inch. The guides and knives on the safety stitch machines shall be set to trim only the ravelled ends of the fabric.

3.6.1.1 Type 301 stitching. Ends of stitching shall be backstitched or overstitched 1/2 inch minimum except when caught in other stitching or turned under in a hem. The ends of the label and hand stitching shall be overlapped not less than three stitches. Thread tension shall be maintained so that there will be no loose stitching resulting in puckering of the materials sewn. The lock shall be embedded in the materials sewn.

3.6.1.1.1 Repairs of type 301 stitching. Repairs of type 301 stitching shall be as follows:

a. When thread breaks or bobbin run-outs occur during stitching, the stitching shall be repaired by restarting the stitching a minimum of 1 inch back of the end of the stitching. 1/

b. Thread breaks or two or more consecutive skipped or run-off stitches noted during inspection of the item (in-process or end item) shall be repaired by overstitching. The stitching shall start a minimum of 1 inch in back of the defective area and continue a minimum of 1 inch beyond the defective area onto the existing stitching. Loose or excessively tight stitching shall be repaired by removing the defective stitching, without damaging the materials, and restitching in the required manner. 1/

1/ When making the above repairs, the ends of the stitching are not required to be backstitched.

3.6.1.2 Type 401 stitching. Thread tension shall be maintained so that there will be no loose stitching. Both ends of all seams or stitching produced with 401 stitch type, when not turned under in a hem or held down by other stitching, shall have a 1/2 to 3/4 inch chain extending beyond each end. The looper (underthread) shall be on the inside of the jacket. All repairs shall be in accordance with 3.6.1.1.1a and 3.6.1.1.1b. Repairs may be made using 301 stitch type.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:00Z
Check the source to verify that this is the current version before use.

3.6.1.3 Types 503, 504, 515, 516, and 519 stitching. Thread tension shall be maintained so that there will be no loose stitching. All repairs shall be in accordance with 3.6.1.1.1a and 3.6.1.1.1b, except substitute 3/4 inch for 1 inch wherever 1 inch appears.

3.6.1.4 Bartacks. Unless otherwise specified, bartacks shall be as specified in table II. Bartacks shall be free of thread breaks and loose stitching.

3.6.1.5 Thread ends. All thread ends that are visible on the finished item shall be trimmed to a length of not more than 1/4 inch.

3.7 Repairs. Repairs such as mends, darns, patches, or splices are not permitted on the jacket.

3.8 Manufacturing operations requirements. The jacket shall be manufactured in accordance with operations specified in table II. The contractor is not required to follow the exact sequence of operations listed. Any additional basting or holding stitching used to facilitate manufacture is permissible provided the thread is removed or does not show on the finished jacket.

3.9 Use of automated apparel equipment. Automated apparel equipment may be used to perform any of the operations specified in table II, providing that the seam and stitch type are as specified and the finished component conforms to the required configuration. When a government furnished shaper pattern is forwarded, the component shall conform to that pattern.

NO.	TABLE II. MANUFACTURING OPERATIONS REQUIREMENTS	STITCH TYPE	SEAM AND STITCHING TYPE	STITCHES PER INCH	THREAD		
					NEEDLE	BOBBIN/ LOOPER	COVER
1.	Cutting. a. Cut the jacket parts in strict accordance with the patterns which show size, shape, directional lines and placement of pockets for proper assembly. b. Cut the component parts out of one piece of material except the undercollar, collar interlining, neck tab, front pockets and slide fastener reinforcements which may be cut from ends. Parts cut from ends shall approximate the shade of the jacket. c. Cut the lining parts out of the same piece of material. (Care should be taken in cutting the batting material and handling the cut parts in that the ends of the quilting stitching have a tendency to run back). The face side of the lining parts shall face the wearer (see 3.3.3). NOTE: Broken stitches of the quilting pattern may be repaired by stitching back of each end of break not less than 1 inch with type 301 stitching and the same type and color of thread. d. Cut the armhole extension pieces out of the same piece of material. e. Cut the tape for hanger loops 4-1/4 to 4-1/2 inches long.

3.10 Finished measurements. The finished dimensions for the jacket shall be as shown in table III. A plus or minus 3/4 inch tolerance is allowed on all measurements.

TABLE III. Finished measurement (inches)

	Short	Regular	Long
Half chest 1/			
X-Small	21	21	21
Small	23	23	23
Medium	25	25	25
Large	27	27	27
X-Large	29	29	29
Back length 2/			
X-Small	21-5/8	22-5/8	23-5/8
Small	22-1/8	23-1/8	24-1/8
Medium	22-5/8	23-5/8	24-5/8
Large	23-1/8	24-1/8	25-1/8
X-Large	23-5/8	24-5/8	25-5/8
Sleeve length 3/			
X-small	13-5/8	14-5/8	15-5/8
Small	13-5/8	14-5/8	15-5/8
Medium	13-5/8	14-5/8	15-5/8
Large	13-5/8	14-5/8	15-5/8
X-Large	13-5/8	14-5/8	15-5/8

1/ Half chest. Jacket front closed, at base of armhole, from folded edge to folded edge.

2/ Back length. At center back, from collar joining seam to top of knit waistband.

3/ Sleeve length. From armhole along underarm seam to top of cuff.

3.11 Workmanship. The finished jacket shall conform to the quality of product established by this document and the occurrence of defects shall not exceed the applicable acceptable quality level.

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection requirements (examinations and tests) as specified herein.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:00Z
Check the source to verify that this is the current version before use.

Except as otherwise specified in the contract or purchase order, the contractor may use his own or any other facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the Government. The Government reserves the right to perform any of the inspections set forth in this specification where such inspections are deemed necessary to ensure supplies and services conform to prescribed requirements.

4.1.1 Responsibility for compliance. All items must meet all requirements of sections 3 and 5. The inspection set forth in this specification shall become a part of the contractor's overall inspection system or quality program. The absence of any inspection requirements in the specification shall not relieve the contractor of the responsibility of ensuring that all products or supplies submitted to the Government for acceptance comply with all requirements of the contract. Sampling inspection, as part of manufacturing operations, is an acceptable practice to ascertain conformance to requirements, however this does not authorize submission of known defective material, either indicated or actual, nor does it commit the Government to accept defective material.

4.1.2 Responsibility for dimensional requirements. Unless otherwise specified in the contract or purchase order, the contractor is responsible for ensuring that all specified dimensions have been met. When dimensions cannot be examined on the end item, inspection shall be made at any point, or at all points in the manufacturing process necessary to ensure compliance with all dimensional requirements.

4.2 Classification of inspections. The inspection requirements specified herein are classified as follows:

a. First article inspection (see 4.3)
b. Quality conformance inspection (see 4.4)

4.3 First article inspection. When a first article is required (see 3.1 and 6.2), it shall be examined for the defects specified in 4.4.3 and 4.4.4.

4.4 Quality conformance inspection. Unless otherwise specified, sampling for inspection shall be performed in accordance with MIL-STD-105.

4.4.1 Component and material inspection. In accordance with 4.1, components and materials shall be inspected in accordance with all the requirements of referenced documents unless otherwise excluded, amended, modified, or qualified in this specification or applicable purchase document.

4.4.2 In-process inspection. Inspection of subassemblies shall be made to ascertain that construction details which cannot be examined in the finished product are in accordance with specified requirements. The Government reserves the right to exclude from consideration for acceptance, any material or service for which in-process inspection has indicated nonconformance.

Check the source to verify that this is the current version before use.

4.4.3 End item visual examination. The end items shall be examined for the defects listed in table IV. The lot size shall be expressed in units of jackets. The sample unit shall be one jacket. The inspection level shall be II and the acceptable quality level (AQL), expressed in terms of defects per hundred units, shall be 2.5 for major defects, 15 for major and minor A combined defects, and 40 for total (major, minor A, and minor B combined) defects.

TABLE IV. End item visual defects

Examine	Defect	Classification Major	Minor A	Minor B
Material defects and damages	Hole, cut, tear, or needle chew			
	- On outside, any	101		
	- On inside:			
	- up to 1/4 inch in diameter or length, inclusive			301
	- more than 1/4 inch up to 1/2 inch inclusive		201	
	- more than 1/2 inch	102		
	Mend, darn, or patch (in diameter or length)			
	- On outside, any	103		
	- On inside:			
	- 1/4 inch up to 1/2 inch inclusive			302
	- more than 1/2 inch		202	
	Friction burn:			
	- when fibers are broken (use defect classification specified above for "Hole, cut, tear or needle chew")			
	- when fibers are not broken, more than 1/4 inch in length			303
	Drill hole exposed on outside			304
	Weakening defects:			
	- Smash	104		
	- Multiple float or loose slub:			
	- on outside		203	
	- on inside			305
	Unsightly slub or shade bar:			
	- on outside		204	
	- on inside			306
	One or more rows of stitching omitted in quilting of lining	105		
	Piecing or splicing on lining	106

Check the source to verify that this is the current version before use.

TABLE IV. End item visual defects (cont'd)

Examine	Defect	Classification Major	Minor A	Minor B
Material defects and defects (cont'd)	Thick or thin place in the quilting of lining	107		
	More than 1-1/2 inches of continuous broken or missing stitches in the quilting	108		
Material defects: Cuffs and waistband	Run or dropped stitch	109		
	Abrasion mark, resulting in a weak area	110		
	Not specified size	111		
Shaded parts	Shaded part - outer shell (except parts that may be cut from ends)		205	
	Shaded lining part			307
Cleanness	Any spot or stain on outside			308
	Thread ends not trimmed, or loose threads not removed throughout jacket (except for thread ends of quilting of lining material)			309
	One or more shade markings not removed			310
	Shade marking visible on outside			311
Component and assembly	Any component part or required operation omitted (unless otherwise classified herein)	112		
	Any operation not performed as specified (unless otherwise classified herein)		206	
	Lining set into jacket with natural thread of dumbbell pattern stitching facing wearer	113		
Cutting	Any component part not cut in accordance with directional lines as indicated by marks on pattern or not cut in accordance with document requirements	114

Check the source to verify that this is the current version before use.

TABLE IV. End item visual defects (cont'd)

Examine	Defect	Classification Major	Minor A	Minor B
Seams and stitching	Accuracy of seaming:			
	- Seam twisted, puckered, or pleated		207	
	- Part of jacket caught in unrelated operation or stitching	115		
	- End of stitching, when not caught in other seam or stitching, backstitched or overstitched less than 1/2 inch			312
	- Thread break stitched less than 1 inch beyond each end of break			313
	- Ends of a continuous line of stitching overlapped less than 1 inch on all seams			314
	Gage of stitching and seam allowance:			
	- Irregular, i.e., unevenly gaged, or corresponding stitching not uniform (to be scored only where condition exists along major portion of seam)		208	
	- Not width specified or not within range of gage specified or varies more than 1/16 inch when no range is specified			315
	- Edge or raised stitching sewn too close to edge, resulting in damage to cloth	116		
	Open seam (stitches skipped, broken, or missing):			
	- Any seam open by:			
	- up to 1/4 inch, inclusive			316
	- more than 1/4 inch up to 1 inch inclusive		209	
	- more than 1 inch	117		
	Raw edge:			
	- 1/8 inch up to 1/4 inch, inclusive			317
	- more than 1/4 inch to 1 inch, inclusive		210	
	- more than 1 inch	118		
	Any raw edge caused by omission of overedge stitching for a distance of 3 inches or more		211

Check the source to verify that this is the current version before use.

TABLE IV. End item visual defects (cont'd)

Examine	Defect	Classification Major	Minor A	Minor B
Seams and stitching (cont'd)	Run-offs (on edge or raised stitching):			
	- 1/4 inch up to 1/2 inch, inclusive			318
	- more than 1/2 inch		212	
	Seam and stitch type:			
	- Seam or stitch type not as specified		213	
	- Looper thread of 401 stitch type on joining seam finishing on outside of seam			319
	Stitch tension:			
	- Loose tension resulting in a loose seam	119		
	- Loose tension on raised or edge stitching		214	
	- Tight tension (stitches break when strain is applied in direction of seam or stitching)	120		
	- Thread tension of liner dumbbell pattern not balanced, i.e., natural thread shows on face of quilted batting		215	
	Stitches per inch (except on labels) (to be scored only when the condition exists on the major portion of the seam):			
	- more than the maximum specified or less than the minimum specified		216	
	Stitches per inch less than the minimum specified on labels			320
	Stitches skipped, broken, or missing on edge or raise stitching:			
	- up to 1 inch			321
	- more than 1 inch		217	
Bartacks	One or more omitted, or misplaced not serving intended purpose (unless otherwise classified herein)		218	

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:00Z
Check the source to verify that this is the current version before use.

TABLE IV. End item visual defects (cont'd)

Examine	Defect	Classification Major	Minor A	Minor B
Bartacks (cont'd)	Not specified size			322
	Loose, incomplete or broken stitching			323
Slide fastener	Defective, affecting function	121		
	Not type or size specified		219	
	Slide fastener tape cut or frayed	122		
	Thong missing			324
	Thong not specified size			325
	Slide fasteners attached with less than two rows of stitching through length of tape (each side)	123		
	Ends of thong not dipped or seared			326
	Ends of thong fray when tugged at			327
Collar	Fullness or puckers on top collar		220	
	Tight at joining to neck seam, causing puckers or pleats on front or back		221	
	Side ends not properly worked out, having a fold of more than 1/8 inch		222	
	Twisted	124		
	Points at ends of collar uneven in length 3/8 inch or more, or not uniform in shape		223	
	Neck tab not finished flat		224	
	Fastener tape misplaced not serving intended purpose		225	
	Fastener tape not specified size			328
Hanger loop	Missing or misplaced		226	
	Not specified size			329
Fronts	Uneven at bottom by 1/2 inch or more or at top by 1/4 inch or more when closed		227	
	Fastener tape set too loosely or too tight, causing distortion on tapes or front	125		
	Top end of fastener tape not caught in collar joining seam	126

TABLE IV. End item visual defects (cont'd)

Examine	Defect	Classification Major	Minor A	Minor B
Fronts (cont'd)	Cord edges of front opening not abutted or overlapping 1/8 inch or more when fastened		228	
	Cording at edges not extending the full length of the opening		229	
Front pockets	Pockets or flaps out of alignment by 1/4 inch or more		230	
	Welts or flaps not uniform in length by more than 1/4 inch		231	
	Hook or loop fastener tape not specified size		232	
	Fastener part missing	127		
	Welt not smooth and flat when pocket is closed			330
	Hook or loop portions of fastener tape not positioned as specified	128		
	Flaps not positioned as specified		233	
	Hook and loop fastener tapes reversed, i.e., hook portion on pocket flap, and loop portion on welt		234	
Utility and pencil pocket	Pocket set on crookedly		235	
	Fastener bridge not at top	129		
	Edge of pocket pleated or twisted in stitching		236	
	Edge of slide fastener tape extending beyond edge of pocket by 1/8 inch or more	130		
	Pencil pocket compartments uneven in width by more than 1/4 inch		237	
	Slide fastener (when in closed position) exposed more than 1 inch		238	
Sleeves	Reversed	131		
	Sleeve or body of jacket puckered or pleated at armhole		239

Check the source to verify that this is the current version before use.

TABLE IV. End item visual defects (cont'd)

Examine	Defect	Classification Major	Minor A	Minor B
Sleeves (cont'd)	Bottom of sleeve twisted	132		
	Armhole seam not raise stitched at shoulder		240	
	Cuff not specified size		241	
	Without elbow patches	133		
Back	Hook or loop fastener tapes missing on retrieval strap opening	134		
	Hook or loop portions of fastener tape not positioned as specified		242	
	Pull tab on retrieval strap opening omitted	135		
	Finished pull tab length less than 1 inch or more than 1-1/8 inches			331
	Retrieval strap opening less than 11-3/4 inches or more than 12 inches in length		243	
Direction of seams	Fronts not lapped on back at shoulder or at side			332
	Front sleeve not lapped on back sleeve			333
Waistband	Not specified size	136		
Labels	Missing, incorrect, or illegible:			
	- size or combination identification size (where applicable)	137		
	- identification, instruction, or combination identification instruction (where applicable)		244	
	Not stitched on all four sides		245	
	Stitching through printing		246	
	Size label off center by more than 1/8 inch, or any other label not positioned as specified		247	

4.4.4 End item dimensional examination. The end items shall be examined for conformance to the dimensions specified in table III. Any dimension not within the specified tolerance (see 3.10) shall be classified as a defect.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:00Z
Check the source to verify that this is the current version before use.

The lot size shall be expressed in units of jackets. The sample unit shall be one jacket. The inspection level shall be S-3 and the AQL, expressed in terms of defects per hundred units, shall be 4.0.

4.4.5 Packaging examination. The fully packaged end items shall be examined for the defects listed below. The lot size shall be expressed in units of shipping containers. The sample unit shall be one shipping container fully packaged. The inspection level shall be S-2 and the AQL, expressed in terms of defects per hundred units, shall be 2.5.

Examine	Defect
Marking (exterior and interior)	Omitted; incorrect; illegible; of improper size, location, sequence, or method of application.
Materials	Any component missing, damaged, or not as specified.
Workmanship	Inadequate application of components, such as: incomplete closure of container flap, loose strapping, inadequate stapling, or improper taping. Bulged or distorted container.
Content	Number of jackets per container is more or less than required. 1/ Size shown on one or more jackets not as specified on shipping container. 1/

1/ For this defect, one shipping container in the sample shall be examined.

4.4.6 Palletization examination. The fully packaged and palletized end items shall be examined for the defects listed below. The lot size shall be expressed in units of palletized unit loads. The sample unit shall be one palletized unit load, fully packaged. The inspection level shall be S-1 and the AQL, expressed in terms of defects per hundred units, shall be 6.5.

Examine	Defect
Finished dimensions	Length, width, or height exceeds specified maximum requirements.
Palletization	Pallet pattern not as specified. Load not bonded with required straps as specified.
Weight	Exceeds maximum load limits.
Marking	Omitted; incorrect; illegible; of improper size, location, sequence, or method of application.

5. PACKAGING

5.1 Preservation. Preservation shall be level A or Commercial as specified (see 6.2).

5.1.1 Level A preservation. Each jacket, with slide fasteners closed, shall be neatly folded to measure approximately 23 inches in length by 14-1/2 inches in width. Each folded jacket shall be inserted in a close-fitting clear polyethylene film bag conforming to A-A-50083.

5.1.2 Commercial preservation. The jackets shall be preserved in accordance with ASTM D 3951.

5.2 Packing. Packing shall be level A, B, or Commercial as specified (see 6.2).

5.2.1 Level A packing. Ten jackets of one class and size only, preserved as specified in 5.1, shall be packed in a snug-fitting fiberboard container conforming to style RSC-L, grade V2s of PPP-B-636. Level A unit packs shall be packed flat, ten in depth within a shipping container. Inside dimensions of each shipping container shall approximate 23-1/2 inches in length, 15 inches in width, and 15 inches in depth. Approximate dimensions are furnished as a guide only. Each shipping container shall be closed in accordance with method III, waterproofed in accordance with method V, and reinforced as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.5. Shipping containers shall be arranged in unit loads in accordance with MIL-L-35078 for the type and class of load specified (see 6.2). Strapping shall be limited to nonmetallic strapping, except for type II, class F loads.

5.2.2 Level B packing. Ten jackets of one class and size only, preserved as specified in 5.1, shall be packed in a snug-fitting fiberboard shipping container conforming to style RSC-L, type CF (variety SW) or SF, class domestic, grade 275 of PPP-B-636. The inside of each shipping container shall be fitted with a box liner conforming to type CF, class domestic, variety DW, grade 275 of PPP-B-636. Level A unit packs shall be packed flat, ten in depth within a shipping container. Inside dimensions of each shipping container shall approximate 23-1/2 inches in length, 15 inches in width, and 15 inches in depth. Approximate dimensions are furnished as a guide only. Each shipping container shall be closed in accordance with method II as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.5.

5.2.2.1 Weather-resistant fiberboard container. When specified (see 6.2), the shipping container shall be a grade V3c, V3s, or V4s fiberboard box fabricated in accordance with PPP-B-636 and closed in accordance with method III as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.5.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:00Z
Check the source to verify that this is the current version before use.

5.2.3 Commercial packing. Jackets, preserved as specified in 5.1, shall be packed in accordance with ASTM D 3951.

5.3 Palletization. When specified (see 6.2), jackets packed as specified in 5.2.2 or 5.2.3 shall be palletized on a 4-way entry pallet in accordance with load type Ia of MIL-STD-147. Pallet types shall be type I (4-way entry), type IV, or type V in accordance with MIL-STD-147. Pallets shall be fabricated from wood groups I, II, III, or IV of MIL-STD-731. Each prepared load shall be bonded with primary and secondary straps in accordance with bonding means C and D or film bonding means F or G. Pallet pattern shall be number 3 in accordance with appendix of MIL-STD-147.

5.4 Marking. In addition to any special marking required by the contract or purchase order, unit packs, shipping containers, and palletized unit loads shall be marked in accordance with MIL-STD-129 or ASTM D 3951, as applicable.

5.4.1 Polyethylene bagged unit packs. Polyethylene bagged unit packs shall have the required identification information legibly printed or stamped in black directly on the bag across the center face or on a white paper label inserted within the bag so as to permit ready identification.

6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

6.1 Intended use. The jacket is intended for wear by military personnel of the Department of Defense as part of the combat vehicle crewmens' and aviation crewmens' clothing.

6.2 Acquisition requirements. Acquisition documents must specify the following:

a. Title, number, and date of this specification.
b. Class and size required (see 1.2).
c. Issue of DODISS to be cited in the solicitation, and if required, the specific issue of individual documents referenced (see 2.1.1 and 2.2).
d. When a first article is required (see 3.1, 4.3, and 6.3).
e. Levels of preservation and packing (see 5.1 and 5.2).
f. Type and class of unit load required (see 5.2.1).
g. When weather-resistant grade fiberboard shipping containers are required for level B packing (see 5.2.2.1).
h. When palletization is required (see 5.3).

6.3 First article. When a first article is required, it shall be inspected and approved under the appropriate provisions of FAR 52.209. The first article should be a preproduction sample. The contracting officer should specify the appropriate type of first article and the number of units

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:00Z
Check the source to verify that this is the current version before use.

to be furnished. The contracting officer should include specific instructions in acquisition documents regarding arrangements for selection, inspection, and approval of the first article.

6.4 Sample. For access to samples, address the contracting activity issuing the invitation for bids or request for proposal.

6.5 Suggested resin. A suggested resin (see 3.3.9.4) for dipping ends of slide fastener thongs is "No Fray No. 64", Champion Packaged Products, Inc., 4939 South Austin Avenue, Chicago, IL 60638.

6.6 Subject term (key word) listing.

Aircrew
Aramid
Clothing
Coat
Cold weather
Combat vehicle crewman
