COMMERCIAL ITEM DESCRIPTION

BANDAGE ELASTIC

The General Services Administration has authorized the use of this Commercial Item Description in preference to Bandage, Cotton, Elastic of Military Specification MIL-B-37163 dated 4 June 1975.

This Commercial Item Description covers an elastic adhesive bandage capable of causing compression and suitable for binding where pressure is required.

Salient Characteristics:

Type I:

The bandage shall be a roll of elastic adhesive bandage suitable for securing large bulky wound dressings and for binding where pressure is required. The 1 inch size is suitable as a fixation device for external catheters.

Each bandage shall be one continuous piece and shall be evenly and neatly rolled with the adhesive mass to the inside, on a suitable rigid core of approximately 1-1/4 inch diameter. The bandage shall be free of ravelings and loose threads.

Each bandage shall be capable of being stretched in the warp direction without mechanical force, to a minimum length of 5 yards, and testing for stretch shall be determined by stretching manually. The bandage shall be a minimum of 3 yards unstretched. After the fabric backing has been stretched in the warp direction and then released, the fabric shall return to is approximate original relaxed condition.

The fabric backing shall be all virgin cotton, crimped weave, with leno or slit edges, and having a minimum thread count of 39 in the warp direction and 32 in the fill direction. Both warp and fill yarns shall be combed or carded peeler cotton having a nominal staple length of 1-1/16 inch. The backing fabric shall have a minimum weight of 7 ounces per square yard and the color of the fabric shall be off-white (natural) or light tan.

AMSC/NA FSC 6510

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

Check the source to verify that this is the current version before use.

For the fabric backing, the thread count per inch and the weight per square yard shall be in the relaxed condition. The number of threads per inch shall be in accordance with Federal Test Method Standard No. 191, method 5050 except the average of the results obtained from three places on each sample roll shall be the thread count for the sample roll.

The adhesive on the fabric backing shall be pressure-sensitive, spread on one side of the fabric and shall be a smooth homogeneous blend of new natural and synthetic rubber, plasticizers, filler and resins. The color of the adhesive mass shall be ivory or off-white. The adhesive coating on the roll shall be uniformly applied, substantially free of breaks and shall not be toxic or irritating to the skin. The feather edges of the leno-edged material shall be free of adhesive.

The minimum weight of the adhesive mass shall be 145 gm/m^2 and shall be determined in the following manner:

Weigh a specimen of the finished bandage to the nearest thousandth of a gram. Remove all of the adhesive mass from the sample with a suitable solvent. Dry, then reweigh sample. The difference between the two weighings is the weight of adhesive mass of the sample. Convert this weight to gm/m^2.

The adhesive quality (adhesion) shall be a minimum average of 1 lb when tested in accordance with the Shear Adhesive Strength Test of Adhesive Tape U.S.P. The adhesive quality test result shall be the average of the results obtained from not less than 3 specimens from different sample rolls.

TABLE I

Width	Min. Length (Stretched)	Min. Length (unstretched)	SIZE
1 inch (+/- 1/8 inch)	5 yards	3 yards	1
3 inch (+/- 1/8 inch)	5 yards	3 yards	2
4 inch (+/- 1/8 inch)	5 yards	3 yards	3
6 inch (+/- 1/8 inch)	5 yards	3 yards	4

Type II:

The bandage shall be a roll of elastic adhesive bandage suitable for securing large bulky wound dressings and for binding where pressure is required.

Each bandage shall be one continuous piece and shall be evenly and neatly rolled with the adhesive mass to the inside, on a suitable rigid core of approximately 1 inch diameter. The bandage shall be free of ravelings and loose threads.

Each bandage shall be capable of being stretched in the warp direction without mechanical force to a minimum length of 5 yards, and testing for stretch shall be determined by stretching manually. The bandage shall be a minimum of 3 yards unstretched. After the fabric backing has been stretched in the warp direction and then released, the fabric shall return to its approximate original relaxed condition.

The fabric backing shall be a minimum of 89 percent cotton and the remainder shall be spandex and polyester. The spandex shall be covered with polyester. The warp shall consist of a minimum of 24 cotton yarns per inch and a minimum of 12 polyester covered spandex strands per inch. The filling shall have a minimum of 28 cotton yarns per inch. The fabric shall have a minimum weight of 7 ounces per square yard, and the color of the fabric shall be off-white (natural).

For the fabric backing, the thread count per inch and the weight per square yard shall be in the relaxed condition. The number of threads per inch shall be in accordance with Federal Test method Standard No. 191, method 5050 except the average of the results obtained from three places on each sample roll shall be the thread count for the sample roll.

The adhesive on the fabric backing shall be pressure-sensitive, spread on one size of the fabric and shall be a smooth homogeneous blend of new natural and synthetic rubber, plasticizer, fillers and resins. The color of the adhesive mass shall be ivory or off-white. The adhesive coating on the roll shall be uniformly and properly applied, substantially free of breaks and shall not be toxic or irritating to the skin.

The minimum weight of the adhesive mass shall be 127 gm/m^2 and shall be determined in the following manner:

Weigh a specimen of the finished bandage to the nearest thousandth of a gram. Remove all of the adhesive mass from the sample with a suitable solvent. Dry, then reweigh sample. The difference between the two weighings is the weight of adhesive mass of the sample. Convert this weight to gm/m^2.

The adhesive quality (adhesion) shall be a minimum average of 10 ounces when tested in accordance with the Shear Adhesive Strength Test of Adhesive Tape U.S.P. The adhesive quality test result shall be the average of the results obtained from not less than 3 specimens from different sample rolls.

TABLE II

Width	Min. Length (Stretched)	Min. Length (unstretched)	SIZE
3 inch (+/- 1/8 inch)	5 yards	3 yards	2
4 inch (+/- 1/8 inch)	5 yards	3 yards	3
6 inch (+/- 1/8 inch)	5 yards	3 yards	4

Workmanship. The Bandage shall be free from defects which detract from its appearance or impair its serviceability.

Unit. Package (PG).

For Size 1, Size 2, and Size 3, one package containing 36 individually wrapped rolls of one size only, as specified, constitutes one unit.

For Size 4, one package containing 12 individually wrapped rolls, as specified, constitutes one unit.

Quality Assurance Provisions.

Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection requirements as specified herein. Except as otherwise specified in the contract or purchase order, the contractor may use his own or any facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the Government. The Government reserves the right to perform any of the inspections set forth in the specification where such inspections are deemed necessary to assure supplies and services conform to prescribed requirements.

Records. Records of examinations and tests performed by or for the contractor shall be maintained by the contractor and made available to the Government upon the Government's request, at any time, or from time to time, during the performance of the contract and for a period of three years after delivery of the supplies to which such records relate.

Check the source to verify that this is the currenversion before use.

Inspection. Inspection, as used herein, is defined as both examination (such as visual or auditory investigation without the use of special laboratory appliances or procedures) and testing (determination by technical means of physical and chemical properties) of the item. Testing and examination shall be conducted to determine compliance with all specification requirements. Test methods shall be suitable, accurate and reproducible.

Sampling for examination. Sampling for examination shall be conducted in accordance with MIL-STD-105 and as specified herein. The unit of product for examination shall be one bandage. Unless otherwise specified, sampling for examination shall be conducted at inspection level II, AQL 2.5 maximum percent defective.

Contractor certification. The contractor shall certify that the product offered meets the salient characteristics of this description and conforms to the producers' own drawings, specifications, standards, and quality assurance practices. The Government reserves the right to require proof of such conformance prior to first delivery and thereafter as may be otherwise provided for under the provisions of the contract.

Metric Products. Products manufactured to metric dimensions will be considered on an equal basis with those manufactured using inch-pound units, providing they fall within the tolerances specified using conversion tables contained in the latest revision of Federal Standard No. 376, and all other requirements of this document are met.

If a product is manufactured to metric dimensions and those dimensions exceed the tolerances specified in the inch/pound units, a request should be made to the contracting officer to determine if the product is acceptable.

The contracting officer has the option of accepting or rejecting the product.

Regulatory requirements.

Federal Food, Drug and Cosmetic Act. If the product covered by this document has been determined by the U.S. Food and Drug Administration to be under its jurisdiction, the offeror/contractor shall comply, and be responsible for compliance by its subcontractors/suppliers, with the requirements of the Federal Food, Drug and Cosmetic Act, as amended, and regulations promulgated thereunder. In addition, the offeror/contractor shall comply, and be responsible for compliance by its subcontractors/suppliers, with the requirements of all other applicable Federal, State, and local statutes, ordinances, and regulations.

Recovered materials. The offeror/contractor is encouraged to use recovered material in accordance with Public Law 94-580, as amended, and as implemented by Federal Acquisition Regulation Subpart 23.4 to the maximum extent practical.

Preservation, packaging, packing, labeling, and marking. Unless otherwise specified, preservation, packaging, and packing shall be to a degree of protection to preclude damage to containers and/or contents thereof under normal shipping conditions, handling, etc., involving shipment from the supply source to receiving activity, plus reshipment from receiving activity, and shall conform to applicable carrier's rules and regulations. Intermediate and exterior package quantities and labeling and marking shall be as specified in the contract and/or order.

NOTE: The following National Stock Numbers are covered by this document:

NSN	ITEM IDENTIFICATION	SIZE	TYPE
6510-01-235-0361	BANDAGE, ELASTIC 3 inch by 5 yards, 36s	2	I
6510-01-235-0362	BANDAGE, ELASTIC 1 inch by 5 yards, 36s	1	I
6510-01-100-5562	BANDAGE, ELASTIC 3 inch by 5 yards, 36s	2	I & II
6510-01-101-1950	BANDAGE, ELASTIC 4 inch by 5 yards, 36s	3	I & II
6510-01-096-5293	BANDAGE, ELASTIC 6 inch by 5 yards, 12s	4	I & II
