30 May 2008

DETAIL SPECIFICATION SHEET

CONNECTORS, ELECTRICAL, CIRCULAR, COVER,
PROTECTIVE, RECEPTACLE, MIL-DTL-38999, SERIES IV

This specification is approved for use by all Departments
and Agencies of the Department of Defense.

The requirements for acquiring the product described herein
shall consist of this specification sheet and MIL-DTL-38999.

mm	Inches	mm	Inches	mm	Inches
4.80	.189	27.64	1.088	34.93	1.375
6.35	.25	27.79	1.094	127.00	5.00

25	45° 30’	149° 34’	210° 26’	314° 30’

NOTES:

1. Dimensions are in millimeters. Inch equivalents are given for information only.
2. Method of attachment to cover and / or ring is optional.
3. Protective covers shall fit receptacles with pin or socket contacts configured in any polarization position.

REQUIREMENTS:

Dimensions and configurations: See figures 1 and 2.

Materials:

Cover - Classes C, F, G, R, W and X: Impact extruded or machined aluminum alloy.
Classes P, T and Z: Impact extruded or machined aluminum alloy.
Classes H, K, N, S and Y: Corrosion resistant steel.
Classes J and M: High performance virgin resin in accordance with MIL-DTL-38999.
Class F: Impact extruded or machined aluminum alloy.
(Cover base materials only. For finishes or surface treatments, see MIL-DTL-38999.)

Gasket - Silicone elastomer.

Ring - Corrosion resistant steel, passivated, 1.020 mm (0.04 inches) maximum thickness.

Rope - Insulated stainless steel, passivated.
Insulation shall withstand 200°C (392°F) environment.

Fastener - Stainless steel, passivated.
Option: Aluminum integral to cover.

Mating connectors: MIL-DTL-38999, series IV.

Gasket shall be bonded to cover, or mechanically retained.

Rope shall rotate freely on fastener.

Fastener tensile strength: The protective cover and rope assembly shall withstand a dead weight tensile load of 11.33 kg (25 pounds) applied to both axial and longitudinal directions. The load shall be applied at the end of the rope assembly and held for 5 minutes. There shall be no separation of the rope assembly from the protective cover or damage to the rope assembly. Both axial and longitudinal directions shall be 11.33 kg (25 pounds). The load shall be applied to the end of the rope.

Air Leakage: Testing shall be in accordance with EIA-364-02, except the minimum period of measurement shall be 10 seconds. The air leakage rate shall be no greater than 1 atmospheric cubic inch per hour (4.55×10^{-3} cm^3/s). Protective covers shall be mated to connectors having either contacts or inserts removed so that a pressure of 10 lbf/in^2 (.703 Kg/cm^2) can be applied against the insides of the protective covers or stowage receptacles.

Check the source to verify that this is the current version before use.

Qualification (all classes): Qualification shall be in accordance with MIL-DTL-38999, except only the following tests shall be required:

Examination of product
Coupling torque
Humidity
Salt spray (corrosion)
Fastener tensile strength (see requirement)
Air leakage

Qualification (classes J and M only): Qualification shall be in accordance with MIL-DTL-38999, except that in addition to the test sequence specified for all classes above, the additional following tests shall be required:

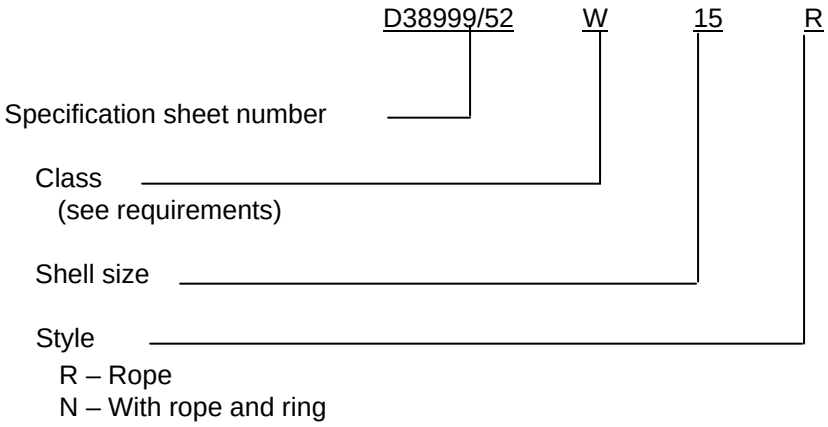

Temperature cycling
Hydrolytic stability

Group A sampling inspection. Sampling for group A inspection shall be as specified in table I.

TABLE I. Group A sampling plan.

Lot size	Sampling size
1 to 13	100 percent
14 to 150	13 units
151 to 280	20 units
281 to 500	29 units
501 to 1,200	34 units
1,201 to 3,200	42 units
3,201 and up	54 units

Part or Identifying Number (PIN) example:

Class F is not for Navy use and is inactive for Air Force new design use.
