1/ The "X" is placed in the dash number to allow the user connector body plating options provided in the general specification. Only connectors of the same materials are to be intermated to reduce the possibility of dissimilar problems, including galvanic corrosion.
2/ The latest version of each cable shall be applicable.
3/ These connectors have captivated center contacts.
4/ These parts are no longer restricted from Navy use.
5/ Inactive for new design (see table III).
6/ Cables to be used for the +200°C thermal shock test.
7/ These connectors are assembled using the applicable crimping tool to the specified cables.
8/ Complete connector assembly shall consist of a body, center contact, intermediate contact, ferrule, and assembly instructions.

VII	X022 X023	X022 X023
VIII	X024 X025	X024 X025

1/ If a connector manufacturer produces a connector which meets all the requirements for two or more connector PIN's (within same series), the manufacturer may receive qualification approval for two or more connector PIN's by qualifying the one connector. It is not necessary that such connectors be in the same group. Each connector, however, must be marked with its own appropriate PIN. For group qualification, the connectors must be of similar design. Qualification of connectors qualifies connectors of the same body material and finish only. "X" designates body material and finish.
