MILITARY STANDARD

ELECTRICAL CONNECTORS, PLUG-IN SOCKETS AND ASSOCIATED HARDWARE, SELECTION AND USE OF

TO ALL HOLDERS OF MIL-STD-1353B:

1. THE FOLLOWING PAGES OF MIL-STD-1353B HAVE BEEN REVISED AND SUPERSEDE THE PAGES LISTED:

NEW PAGE	DATE	SUPERSEDED PAGE	DATE
1	2 July 1980	REPRINTED WITHOUT CHANGE	2 July 1980
2 through 14	30 August 1983	2 through 14	2 July 1980
102.57		102.57	2 July 1980

2. THE FOLLOWING SECTION HAS BEEN REVISED AND SUPERSEDES THE SECTION LISTED:

NEW SECTION	DATE	SUPERSEDED SECTION	DATE
101	30 August 1983	101	2 July 1980

3. RETAIN THIS NOTICE AND INSERT BEFORE THE TABLE OF CONTENTS.

4. Holders of MIL-STD-1353B will verify that page changes indicated above have been entered. This notice page will be retained as a check sheet. This issuance, together with appended pages, is a separate publication. Each notice is to be retained by stocking points until the Military Standard is completely revised or canceled.

1. SCOPE

1.1 Scope. This standard establishes requirements for selection of electrical connectors, plug-in sockets, and their associated hardware, shown in detail in sections 100, 200, 300, and 400, for use in military equipment. Included are the following:

a. Selected electrical connector types and associated hardware chosen jointly by the Departments of the Army, the Navy, and the Air Force for use in the design of military equipment.

b. Guides for the choice and application of electrical connectors and associated hardware for use in military equipment.

Complete detailed requirements for electrical connectors, plug-in sockets, and associated hardware listed in this standard are covered in the applicable specification sheets or MS sheets (see 4.2). When it has been determined that equipment requirements cannot be met by using the connector styles or characteristics listed in this standard, the design engineer with the approval of the cognizant military activity, should select from the applicable connector specification, styles or characteristics not listed herein.

1.2 Purpose of standard. The purpose of this standard is to promote the use of standard parts for new equipment design. The standard parts cover the majority of uses and are arranged in a form for quick references and selection. The applicable connector specification shall be used for specific design details.

2. REFERENCED DOCUMENTS

2.1 Issues of documents. The following documents of the issue in effect on date of invitation for bids or request for proposal, form a part of this standard to the extent specified herein.

SPECIFICATIONS

FEDERAL

WC596	-	Connector, Plug, Receptacle and Cable Outlet, Electrical Power, General Specification for.

MILITARY

MIL-C-17	-	Cable, Radio Frequency, Flexible and Semirigid, General Specification for.
MIL-C-3432	-	Cable and Wire, Electrical (Power and Control; Semiflexible, Flexible and Extra-flexible, 300 and 600 Volts).
MIL-C-5015	-	Connectors, Electrical, Circular Threaded, General Specification for.
MIL-C-21097	-	Connector, Electrical, Printed Wiring Board, General Purpose, General Specification for.
MIL-C-22992	-	Connectors, Plugs, and Receptacles, Electrical, Waterproof, Quick Disconnect, Heavy Duty Type, General Specification for.
MIL-C-24308	-	Connectors, Electrical, Rectangular, Miniature Polarized Shell, Rack and Panel, General Specification for.
MIL-C-28731	-	Connectors, Electrical, Rectangular, Removable Contact, Formed Blade, Fork Type (For Rack and Panel and other Applications), General Specification for.
MIL-C-28748	-	Connectors, Electrical, Rectangular, Rack and Panel, Solder Type and Crimp Type Contacts.
MIL-C-28804	-	Connectors, Electric, Rectangular, High Density, Polarized Center Jackscrew, General Specification for.
MIL-C-38999	-	Connectors, Electrical, Circular, Miniature, High Density, Quick Disconnect (Bayonet, Threaded, and Breech Coupling), Environment Resistant, Removable Crimp and Hermetic Solder Contacts, General Specification for.
MIL-C-39012	-	Connectors, Coaxial, Radio Frequency, General Specification for.
MIL-C-39024	-	Connectors, Electrical: Jacks, Tip (Test Point, Panel or Printed Wiring Type), General Specification for.
MIL-C-39029/4	-	Contacts, Electrical Connector, Pin, Crimp Removable, (For MIL-C-26482 Series 2, MIL-C-81703 Series 3, MIL-C-83733, and MIL-C-83723 Series 3 Connectors).
MIL-C-39029/5	-	Contacts, Electrical Connector, Socket, Crimp Removable, (For MIL-C-26482 Series 2, MIL-C-81703 Series 3, MIL-C-83733, and MIL-C-83733 Series 3 Connectors).
MIL-C-39029/11	-	Contacts, Electrical Connector, Pin, Crimp Removable, (For MIL-C-81659 Series 2 Connectors).
MIL-C-39029/12	-	Contacts, Electrical Connectors, Socket, Crimp Removable, (For MIL-C-81659 Series 2 Connectors).
MIL-C-39029/28	-	Contacts, Electrical Connector, Pin, Crimp Removable, Shielded, (For MIL-C-38999 Series I, II, III and IV Connectors).
MIL-C-39029/29	-	Contacts, Electrical Connector, Pin, Crimp Removable, (For MIL-C-5015 MS3450 Series and MIL-C-83723 Series 2 Connectors).
MIL-C-39029/30	-	Contacts, Electrical Connector, Socket, Crimp Removable, (For MIL-C-5015 MS3450 Series and MIL-C-83723 Series 2 Connectors).
MIL-C-39029/44	-	Contacts, Electrical Connector, Pin, Crimp Removable, (For MIL-C-5015 Series MS3400 Connectors).
MIL-C-39029/45	-	Contacts, Electrical Connector, Socket, Crimp Removable, (For MIL-C-5015 Series MS3400 Connectors).
MIL-C-39029/48	-	Contacts, Electrical Connector, Pin, Crimp Removable, (For MIL-C-22992 Class L Connectors).

Supersedes page 2 of 2 July 1980.

3. DEFINITIONS

3.1 A list of terms used in this standard which are commonly used in electrical connector engineering practice and generally accepted by the electrical and electronic industries are as follows:

a. Adapter. An intermediate device to provide for attaching special accessories or to provide special mounting means.

b. Aerospace. Includes both airborne and space applications (see the definitions of "airborne" and "space").

c. Airborne. Denotes applications peculiar to aircraft and missiles or other systems designed for operation primarily within the earth's atmosphere.

d. Ambient temperature. The temperature of the environment, usually air, surrounding a connector.

e. Back-mounted. A connector mounted from the inside of a panel or box with its mounting flange inside the equipment.

f. Barrel.

(1) Conductor barrel. The section of the terminal, splice or contact that accomodates the stripped conductor.

(2) Insulation barrel. The section of the terminal, splice or contact that accomodates the conductor insulation.

g. Barrel chamfer. Bevel at the end of the conductor barrel for easier entry of the conductor.

h. Basis metal. Metal from which the connector components are made and on which one or more metals or coatings may be deposited.

i. Bayonet coupling, rotary. A quick coupling device for mating connectors utilizing pins on a connector and ramps on the mating connector. Mating and unmating is accomplished by rotating the coupling ring.

j. Belled mouth (bellmouth). The flared or wide entrance of a terminal, splice or contact barrel to permit easier insertion of the conductor.

k. Bifurcated contact. Describes lengthwise slotting of a flat spring contact as used in a printed circuit edge connector.

l. Body, connector. The main portion of a connector to which contacts and other components are attached. This term is not used with connectors incorporating nonintegral shells in their construction.

m. Boot. A form placed around the wire terminations of a multiple contact connector as a protective housing or as a container for potting compound.

n. Braid. Flexible conductor made of a woven or braided assembly of fine wires.

o. Busing. The joining of two or more circuits.

p. Butting dies. Crimping dies so designed that the nest and indentor touch at the end of the crimping cycle. (Also called bottoming dies.)

q. Cable clamp. A mechanical clamp attached to the cable side of the connector to support the cable or wire bundle, provide strain relief, and absorb vibration and shock otherwise transmitted by the cable to the contact/wire connection.

r. Cable sealing clamp. A device consisting of a gland nut and sealing member designed to seal around a single jacket cable.

Supersedes page 8 of 2 July 1980.

Source: https://assist.dla.mil -- Downloaded: 202610-26T07:45Z
Check the source to verify that this is the current version before use.

s. Cable shielding clamp. A device consisting of a sealing member abd cable support designed to terminate the screen (shield) of an electrical cable.

t. Circumferential crimp. The type of crimp where the crimping dies completely surround a barrel resulting in symmetrical indentations in the barrel.

u. Closed entry. A contact or contact cavity design in the insert or body of the connector which limits the size or position of the mating contact or printed circuit board to a predetermined dimension.

v. Color coding. A system of identification of terminals and related devices.

w. Conductor stop. A device on a terminal, splice, contact or tool used to prevent excessive extension of the conductor barrel.

x. Connector, electrical. A device, either a plug or a receptacle, used to terminate or connect the conductors of individual wires or in cables and which provides a means to continue the conductors to a mating connector or printed circuit board.

y. Connector set, electrical. Two or more separate connectors, plug connector and receptacle connector, designed to be mated together. The set may include mixed connectors mated together, such as one connector plug and one dummy connector receptacle, connector receptacle and one dummy electrical plug.

z. Contact. The conductive element in a connector which makes actual contact for the purpose of transferring electrical energy.

aa. Contact area. The area in contact between two conductors, two contacts, or a conductor and a contact permitting the flow of electricity.

ab. Contact arrangement. The number, spacing and arrangement of contacts in a connector.

ac. Contact engaging and separating force. Force needed to either engage or separate contacts to mating contacts or gage pins.

ad. Contact float. The overall side play axial movement and/or angular displacement of contacts within the insert cavity.

ae. Contact resistance. Electrical resistance of a pair of engaged contacts. Resistance may be measured in ohms or millivolt drop at a specified current over the engaged contacts.

af. Contact retainer. A device either on the contact or in the insert to retain the contact in an insert or body.

ag. Contact retention. The axial load in either direction which a contact can withstand without being dislodge from its normal position within an insert or body.

ah. Contact size. An assigned number denoting the size of the contact engaging end.

ai. Contact wipe. The distance of travel (electrical engagement) made by one contact with another during its engagement or separation or during mating or unmating of the connector halves.

aj. Coupling ring. That portion of a plug which aids in the mating or unmating of a plug and receptacle and holds the plug to the receptacle.

ak. Coupling, self-locking. A device on a plug connector which contains means to automatically secure the coupling to the receptacle, and prevent any coupling rotation during shock and vibration.

al. Cover, electrical connector. An item which is specifically designed to cover the mating end of a connector for mechanical and/or environmental protection.

Supersedes page 9 of 2 July 1980.

am. Creep distance. The shortest distance on the surface of an insulator separating two electrically conductive surfaces.

an. Crimp. The physical compression (deformation) of a contact barrel around a conductor in order to make an electrical connection.

ao. Crimping. A pressure method of mechanically securing a terminal, splice or contact to a conductor.

ap. Crimping dies. Portion of the crimping tool that shapes the crimp.

aq. Crimping tool. Mechanism used for crimping.

ar. Cutout, connector. The hole, usually round or rectangular, cut in a metal panel for mounting a connector. May include holes for mounting screws or bolts.

as. Depth of crimp. The distance the indentor penetrates into the barrel.

at. Dielectric. A material having electrical insulating properties.

au. Dummy connector assembly, electrical. Two or more electrical dummy connectors having a common mounting or mounted on each other, each one capable of being independently replaced. Excludes items which are furnished as mated pairs or sets.

av. Dummy connector, receptacle. A connector receptacle which does not have provisions for attaching conductors. It is generally used for storage of a cable assembly connector plug.

aw. Dust cover. (See cover, electrical connector.)

ax. Environmentally sealed. A device that is provided with gaskets, seals, grommets, potting or other means to keep out moisture, dirt, air or dust which might reduce its performance. Does not include nonphysical environments such as RF and radiation.

ay. Extraction tool. A device used for removing removable contacts from a connector. A device used for removing taper pins from taper pin receptacles.

az. Ferrule. A short tube. Used to make connections to shielded or coaxial cables. Also used in connectors to reduce transmission of torque to grommet.

ba. Flange, connector. A projection extending from or around the periphery of a connector with provisions to permit mounting the connector to a panel.

bb. Front mounted. A connector mounted on the outside of a panel or box with its mounting flange outside the equipment.

bc. Full cycling control. Controls placed on the crimping cycle of crimping tools forcing the tool to be closed to its fullest extent completing the crimping cycle before the tool can be opened.

bd. Gang disconnect. A connector that permits tha rapid and simultaneous disconnection of two or more electrical circuits.

be. Grid spaced. When contacts in a multiple contact connector are spaced in a geometric pattern.

bf. Grommet, connector. An elastomeric seal used on the cable side of a connector to seal the connector against moisture, dirt and air.

bg. Guide pin. A pin or rod extending beyond the mating faces of a connector designed to guide the closing or mating of the connector to ensure proper engagement of contacts.

bh. Head assembly. A positioner designed to attach to a crimping tool in place of a turret head.

Supersedes page 10 of 2 July 1980.

Check the source to verify that this is the currentversion before use.

bi. Hermaphroditic connector. A connector design which utilizes contacts in a balanced arrangement such that both mating connectors are identical. The contacts may also be hermaphroditic, and may be arranged as male and female contacts as for pins and sockets. Hermaphroditic contacts may also be used in a manner such that one half of each contact mating surface protrudes beyond the connector interface and both mating connectors are identical.

bj. Hermaphroditic contacts. A contact design which is neither pin nor socket and which mates with other contacts of the same design.

bk. Housing, connector, electrical. Connector less insert, but with insert-retaining and positioning hardware required by standard construction.

bl. Indentor. The part of a crimping tool, usually the moving part, that compresses identations in the contact conductor barrel.

bm. Insert, electrical connector. An insulating element with or without contact(s), designed to position and support contacts in a connector.

bn. Insertion tool. A device used to insert contacts into a connector. A device used to insert taper pins into taper pin receptacles.

bo. Inspection hole. A hole placed at one end of a barrel to permit visual inspection to see that the conductor has been inserted to the proper depth in the barrel prior to crimping.

bp. Insulation support. The portion of a barrel similar to an insulation grip except that it is not compressed around the conductor insulation.

bq. Interface. The two surfaces on the contact side of mating connectors or plug-in component (e.g., relay) and receptacle, which face each other when mated.

br. Interfacial seal. A sealing of mated connectors over the whole area of the interface to provide sealing around each contact.

bs. Jacket. The outermost layer of insulating Material of a cable or wire.

bt. Jackscrew (screwlock). A screw attached to one-half of a two piece multiple contact connector used to draw and hold both halves together and to separate them.

bu. Key. A short pin or other projection that slides in a mating slot, hole, groove or keyway to guide two parts being assembled. Generally used in shell-enclosed connectors to obtain polarization.

bv. Keyway. A slot or groove in which a key slides.

bw. Lanyard release. A plug connector which may be separated from a counterpart receptacle by axial pull of an attached lanyard.

bx. Locking springs. (See contact retainer).

by. Locator. The part of the crimping die, positioner or turret head that places the terminal, splice or contact in the correct crimping area of the crimping tool or die.

bz. Mate. The joining of two connectors.

ca. Mold, potting, electrical connector. An item, solid or split, designed to be used as a hollow form into which potting compound is injected and allowed to cure or set to seal the back of an electrical connector. The potting may eliminate the need for a back shell of the connector. The form may or may not be removable after potting.

cb. Nest. The portion of a crimping die which supports the barrel during crimping.

Supersedes page 11 of 2 July 1980.

Check the source to verify that this is the current version before use.

cc. Nick (notch). A cut or notch in conductor strands or insulation.

cd. Operating temperature. The maximum internal temperature resistant capabilities of a connector in continuous service.

ce. Panel. The side or front of a piece of equipment, usually metal, on which connectors are mounted.

cf. Pigtail. A short wire extending from an electric or electronic device to serve as a jumper or ground connection.

cg. Pin contact. A contact having an engagement end that enters the socket contact.

ch. Plating. The overlaying of a thin coating of metal on metallic components to improve conductivity, provide for easy soldering or prevent rusting or corrosion.

ci. Plug connector. An electrical fitting with pin, socket, or pin and socket contacts, constructed to be affixed to the end of a cable, conduit, coaxial line, cord, or wire for convenience in joining with another electrical connector(s), and not designed to be mounted on a bulkhead, chassis or panel.

cj. Polarize. The arrangement of mating connectors such that the connector can be mated in only one way.

ck. Polarizing pin, key or keyway. A device incorporated in a connector to accomplish polarization.

cl. Positioner. A device that is attached to a crimping tool and locates the contact in the correct location for crimping. It is usually interchangeable with other positioners.

cm. Post insulate. To insulate a connection after assembly.

cn. Potting. The permanent sealing of the cable end of a connector with a compound or material to exclude moisture and/or to provide a strain relief.

co. Potting form. (Not preferred - see mold, potting, electrical connector.)

cp. Pre-insulate. The insulation of a connector prior to assembly of the contact or terminal on the conductor.

cq. Pre-tinned. Solder applied to either or both the contact and conductor prior to soldering.

cr. Pull-out force. Force necessary to separate a conductor from a contact or terminal, or a contact from a connector, by exerting a tensile pull.

cs. Quick disconnect. A type of connector or splice which permits relatively rapid locking and unlocking of mating parts.

ct. Rack. A type of structure used to house electronic components which permits convenient removal of portions of equipment.

cu. Ram. The moving portion in the head of a crimping tool.

cv. Range, wire. The sizes of conductors accomodated by a particular barrel. Also the diameters of wires accommodated by a sealing grommet.

cw. Ratchet control. A device to ensure the full crimping cycle of a crimping tool.

cx. Receptacle, connector. An electrical fitting with contacts constructed to be electrically connected to a cable, coaxial line, cord or wire to join with another electrical connector(s), and is designed to be mounted on a bulkhead, wall, chassis, or panel.

Supersedes page 12 of 2 July 1980.

Check the source to verify that this is the current version before use.

cy. Scoop-proof. Scoop-proof means that because of the connector long shell design, it is impossible for the mating plug connector to inadvertently be cocked into the mating receptacle and damage the pins or electrically short the contacts.

cz. Screwlock. (See jackscrew).

da. Seamless terminal or splice. Terminal or splice conductor barrel made without an open seam.

db. Serrations. Deformation of the inside surface of a conductor barrel to provide better gripping of the conductor or on the outside of the connector body to provide better gripping of the connector.

dc. Service life. A period of time which a device is expected to perform satisfactorily.

dd. Service rating. The maximum voltage or current which a connector is designed to carry continuously.

de. Shell, electrical connector. The outside case of a connector into which the dielectric material and contacts are assembled.

df. Shield, electrical connector. An item especially designed to be placed around that portion of a connector which contains the facilities for attaching wires or cables. It is used for shielding against electrical interference or mechanical injury and usually has provisions for passage of the wire or cable.

dg. Shroud, insulation. (See insulation support).

dh. Slotted tongue. A slotted tongue for sliding onto the screw or stud so that neither screw nor unit needs removing.

di. Sockets. For plug in devices, for use on panel boards, printed circuit boards, and microelectronic components.

dj. Socket contact. A contact having an engagement end that will accept entry of a pin contact.

dk. Solder cup. The end of a terminal or contact in which the conductor is inserted prior to being soldered.

dl. Solder eye. A solder type contact provided with a hole at its end through which a wire can be inserted prior to being soldered.

dm. Solderless connection. The joining of two metals by pressure means without the use of solder, braze or any method requiring heat.

dn. Solderless wrap. A technique of connecting stripped solid wire to a terminal post containing a series of sharp edges by winding the wire around the terminal.

do. Space. Denotes applications peculiar to spacecraft and systems designed for operation near or beyond the upper reaches of the earth's atmosphere.

dp. Spade tongue terminal. Slotted tongue terminal designed to slip around a screw or stud without removing the nut.

dq. Splice. Device used to join two or more conductors to each other.

dr. Stop plate (see locator). A device attached to a crimping tool to properly locate a terminal, splice or contact in the tool prior to crimping.

ds. Strain relief clamp. (See cable clamp).

Supersedes page 13 of 2 July 1980.

Check the source to verify that this is the current version before use.

dt. Strip. To remove insulation from a conductor.

du. Threaded coupling. A means of coupling mating connectors by engaging threads in a coupling ring with threads on a receptacle shell.

dv. Turret head. A device that is attached to a crimping tool which contains more than one locator and allows the locators to be rotated to hold a contact in the correct position for crimping. It is usually interchangeable with other turret heads and head assemblies.

dw. Umbilical connector. A connector used to connect cables to a rocket or missile prior to launching and which is unmated from the missile at the time of launching.

dx. Wiping action (see contact wipe). Action of two electrical contacts which come in contact by sliding against each other.

dy. Work curve. A graph which plots the pull out force and relative conductivity of a crimp joint as a function of various depths of crimping.

dz. Working voltage (see service rating). Maximum voltage at which a connector is rated to operate.

Supersedes page 14 of 2 July 1980.

SECTION 101

CONNECTORS, CYLINDRICAL, GENERAL DUTY

(Applicable specifications: MIL-C-5015, MIL-C-38999, and MIL-C-83723)

Applicable documents	Applicable characteristics	Applicable restrictions	Page
MIL-C-5015 -	This specification covers "AN" type electrical connectors, plugs, and receptacles.		101.4
MS3400's -	Crimp contacts, front release Contact sizes: 0, 4, 8, 12, 16 Temperature range: -55°C to +175°C Coupling: Threaded Hi-impact shock shell.	ARMY: Not for use. NAVY: For shipboard jacketed cable applications only. AIR FORCE: Not for use.	101.6
MS3450's -	Crimp contacts, rear release Contact sizes: 0, 4, 8, 12, 16 Temperature range: Class: L: -55°C to +200°C electroless nickel. For "space" applications only. W: -55°C to +175°C cadmium over suitable underplate. K: -55°C to +200°C firewall Coupling: Threaded.	NAVY: Classes W and K are only acceptable for hookup wire applications. Not for shipboard jacketed cable applications. AIR FORCE: Not for use except where 0, 4, and 8 size contacts are required.	101.11
MIL-C-38999 -	This specification covers miniature, high density, quick disconnect, bayonet, threaded, or breech coupling, circular, environment resistant, electrical connectors using removable crimp or fixed hermetic solder contacts, and are capable of continuous operation within a temperature range of -65°C (-85°F) to +200°C (392°F) for electroless nickel finish and -65°C (-85°F) to +175°C (347°F) for cadmium finish. EMI shielding capabilities are also included.		101.25
Series I -	Crimp contacts, rear release. Solder contacts, hermetics only. Scoop proof. Contact sizes: 12, 16, 20, 22D Temperature ranges: Finish: B: -65°C to +175°C, Olive drab cadmium plate over a suitable underplate (conductive). D: -65°C to 150°C, Fused tin, carbon steel (conductive). F: -65°C to +200°C, Electroless nickel coating (conductive) For "space" applications only. Coupling: Bayonet.	ARMY: For ground equipment only. NAVY: Not for use.	101.31

Supersedes Section 101 of 2 July 1980.

Applicable documents	Applicable characteristics	Applicable restrictions	Page
Series III -	Crimp contacts, rear release. Solder contacts - hermetics only. Scoop-proof. Contact sizes: 12, 16, 20, 22D Temperature ranges: Class: F: -65°C to +200°C Electroless nickel coating (conductive). For "space" applications only. K: -65°C to +200°C Corrosion resistant steel passivated (conductive). W: -65°C to +175°C Olive drab cadmium plate over a suitable underplate (conductive). Y: -65°C to +200°C Corrosion resistant steel passivated (conductive). Coupling: Threaded, triple start, self locking.	NAVY: Not for shipboard jacketed cable applications. Connectors with finish "W" are acceptable for hookup wire applications.	101.39
Series IV -	Crimp contacts, rear release. Solder contacts, hermetics only. Scoop-proof. Contact sizes: 12, 16, 20, 22D Temperature ranges: Class: F: -65°C to +200°C Electroless nickel coating (conductive). For "space" applications only. W: -65°C to +175°C. Olive drab cadmium plate over a suitable underplate (conductive) Y: -65°C to +200°C Corrosion resistant steel passivated (conductive). Coupling: Self-locking breech coupling.	NAVY: Not for shipboard jacketed cable applications.	101.49
MIL-C-83723 -	This specification covers the general requirements for environment resisting, circular, electrical connectors and their associated contacts and accessories. These connectors shall utilize crimp or solder (class H only) contacts and be capable of continuous operation within the temperature range of -65°C (-85°F) to +200°C (392°F).		101.57

MIL-C-5015 PART NUMBER SYSTEM

Part No. example: MS3400D22-22S

Shell configuration:	Front release crimp	Rear release crimp
Wall mounting receptacle	MS3400	MS3450
Box mounting receptacle	MS3402	MS3452
Jam nut mounting receptacle	MS3404	MS3454
Straight plug	MS3406	MS3456
Self-locking plug	-	MS3459
Cable connecting receptacle	MS3401	MS3451

Class:

D - Environment resisting - High impact shock MS3400
L - Environment resisting - Fluid resistant (electroless N) For "space" applications only.
W - Environment resisting - Fluid resistant (Cad OD over suitable underplate)
KS - Firewall, self-locking, stainless steel
KT - Firewall, self-locking, cadmium plated ferrous alloy

} MS3450

Shell size: Shell size in 16th of an inch.

Insert arrangements: See MIL-STD-1651.

Contact style:

P - Pin contact - MIL-C-39029/29 and /44.
S - Socket contact - MIL-C-39029/30 and /45.

Polarization: Normal polarization is considered preferred; however, alternate polarizations, when required by a system, do not require nonstandard part approval.

Standard connectors: See table 101-I.

MIL-C-38999 PART NUMBER SYSTEM

Series I part No. example: MS27466T9B98P

Shell configuration:

	Scoop Proof
Wall mount flange receptacle	MS27466
Straight plug	MS27467 1/
Jam nut mount receptacle	MS27468
Wall mount flange (hermetic)	MS27469
Jam nut mount receptacle (hermetic)	MS27470
Solder mount receptacle (hermetic)	MS27471
Box mount receptacle	MS27496
Box mount flange receptacle	MS27505
Back panel wall mount receptacle	MS27656
Lanyard release plug	MS27661 1/
Thru bulkhead flange mount receptacle	MS27662

Class: E - Environmental resisting (box mount only).
T - Environmental resisting.
Y - Hermetically sealed.

Shell size: Shell size in sixteenths of an inch.

Finish: B - Olive-drab cadmium plate over a suitable underplate (conductive).
D - Fused tin, carbon steel (conductive).
F - Electroless nickel coating (conductive). For "space" applications only.

Insert arrangement: See MIL-STD-1560.

Contact style: P - Pin contact. MIL-C-39029/28, /58, /60, and /76.
S - Socket contact. MIL-C-39029/56, /59, /75, and /77.

Polarization: Normal polarization is considered preferred; however, alternate polarizations, when required by a system, do not require nonstandard part approval.

Standard connectors: See table 101-II.

1/ Contains RFI fingers for EMI/RFI suppression.

Applicable documents	Applicable characteristics	Applicable restrictions	Page
Series I -	Crimp contacts, rear release Solder contacts hermetics only. Scoop-proof. Contact sizes: 12, 16, 20, 22D Temperature ranges: Finish: B: -65°C to +175°C Olive drab cadmium plate over a suitable underplate (conductive). D: -65°C to +150°C Fused tin, carbon, steel (conductive). F: -65°C to +200°C Electroless nickel coating (conductive). For "space" applications only. Coupling: Bayonet.	ARMY: For ground equipment only. NAVY: Not for use.	101.31

MIL-C-38999 PART NUMBER SYSTEM

Series III part no. example: D38999/26FB35PN

Shell configuration:

	Scoop-proof, triple start threaded, self locking	
Wall mount flange receptacle	DOD-C-38999/20	
Straight plug	DOD-C-38999/26	1/
Jam nut mount receptacle	DOD-C-38999/24	
Box mount receptacle (hermetic)	DOD-C-38999/21	
Jam nut mount receptacle (hermetic)	DOD-C-38999/23	
Solder mount receptacle (hermetic)	DOD-C-38999/25	
Lanyard release plug (pin contacts)	DOD-C-38999/29	1/
Lanyard release plug (socket contacts)	DOD-C-38999/30	1/

Class: F - Environment resisting - conductive plating. For "space" applications only.
K - Environment resisting - corrosion resistant steel with firewall barrier.
W - Environment resisting - corrosion resistant plating.
Y - Hermetically sealed - corrosion resistant steel, passivated.

Shell size:

A = 9	F = 19
B = 11	G = 21
C = 13	H = 23
D = 15	J = 25
E = 17	

Finish: Class F: Electroless nickel coating (conductive). For "space" applications only.
Class K: Corrosion resistant steel passivated (conductive).
Class W: Olive drab cadmium plate over a suitable underplate (conductive).
Class Y: Corrosion resistant steel passivated (conductive).

Insert arrangement: See MIL-STD-1560.

Contact style: P - Pin contact MIL-C-39029/28, /58, /60, and /76.

S - Socket contact MIL-C-39029/56, /59, /75, and 77.

Polarization: Normal polarization is considered preferred; however, alternate polarizations, when required by a system, do not require nonstandard part approval.

Standard connectors: See table 101-II.

1/ Contains RFI fingers for EMI/RFI suppression.

Applicable documents	Applicable characteristics	Applicable restrictions	Page
Series III -	Crimp contacts rear release. Solder contacts - hermetics only Scoop-proof. Contact sizes: 12, 16, 20, 22D. Temperature ranges: Class: F: -65°C to +200°C Electroless nickel coating (conductive). For "space" applications only. K: -65°C to +200°C Corrosion resistant steel passivated (conductive). W: -65°C to +175°C Olive drab cadmium plate over a suitable underplate (conductive). Y: -65°C to +200°C Corrosion resistant steel passivated (conductive). Coupling: Threaded, triple start, self-locking.	NAVY: Not for shipboard jacketed cable applications. Connectors with finish "W" are acceptable for hookup wire applications.	101.39

MIL-C-38999 PART NUMBER SYSTEM

Series IV part no. example: D38999/41FB35PN

Shell configuration:

	Scoop-proof, Breech lock
Wall mount flange receptacle	DOD-C-38999/40
Straight plug	DOD-C-38999/47
Jam nut mount receptacle	DOD-C-38999/44
Box mount receptacle (hermetic)	DOD-C-38999/41
Jam nut mount receptacle (hermetic)	DOD-C-38999/43
Solder mount receptacle (hermetic)	DOD-C-38999/45
Box mount receptacle	DOD-C-38999/42
RFI plug	DOD-C-38999/46 1/
Weld mounting receptacle (hermetic)	DOD-C-38999/48
In line cable receptacle	DOD-C-38999/49

Class: F - Environment resisting - conductive plating. For "space" applications only.
W - Environment resisting - corrosion resistant plating.
Y - Hermetically sealed - corrosion resistant steel, passivated.

Shell size:

A = 9	F = 19
B = 11	G = 21
C = 13	H = 23
D = 15	J = 25
E = 17	

Finish: Class F: Electroless nickel coating (conductive). For "space" applications only.
Class W: Olive drab cadmium plate over a suitable underplate (conductive).
Class Y: Corrosion resistant steel passivated (conductive).

Insert arrangement: See MIL-STD-1560.

Contact style: P - Pin contact. MIL-C-39029/28, /58, /60, and /76.
S - Socket contact. MIL-C-39029/56, /59, /75, and /77.

Polarization: Normal polarization is considered preferred; however, alternate polarizations, when required by a system, do not require non-standard part approval.

Standard connectors: See table 101-II.

INSTRUCTIONS: In a continuing effort to make our standardization documents better, the DoD provides this form for use in submitting comments and suggestions for improvements. All users of military standardization documents are invited to provide suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge *(DO NOT STAPLE)*, and mailed. In block 5, be as specific as possible about particular problem areas such as wording which required interpretation, was too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate the problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

NOTE: This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document*(s)* or to amend contractual requirements.
