MIL-B-83054B
AMENDMENT 2
7 MARCH 1984
SUPERSEDING
AMENDMENT 1
22 October 1981

MILITARY SPECIFICATION

BAFFLE AND INERTING MATERIAL, AIRCRAFT FUEL TANK

This amendment forms a part of Military Specification MIL-B-83054B(USAF), dated 17 May 1978, and is approve for use by all Departments and Agencies of the Department of Defense.

PAGE 1

* 2.1, SPECIFICATIONS, Federal:

UU-P-268: Delete title and substitute "Paper, Kraft, Wrapping".

PPP-B-636 Delete title and substitute "Box, Shipping Fiberboard".

PAGE 2

*2.1, SPECIFICATIONS, Military:

MIL-P-116: Delete title and substitute "Preservation, Methods of".

MIL-L7808: Delete title and substitute "Lubricationg Oil, Aircraft Turbine Engine, Synthetic Base, NATO Code Number 0-148".

MIL-I-27686: Delete title and substitute "Inhibitor, Icing, Fuel System".

MIL-T-83233: Delete title and substitute "Turbine Fuel, Aviation, Kerosene Type, Grade JP-8".

*2.1, STANDARDS, Military:

MIL-STD-794: Delete title and Substitute "Parts and Equipment, Procedures for Packaging of".

*2.2, Other publications, under American Society for Testing and Materials: Delete "D 381-75, Standard Method of Test for Existent Gum in Fuels by Jet Evaporation".

PAGE 3

*3.2: Add:

"3.2.2 Tracer element. A tracer element shall be incorporated into the foam formulation of each vendor for identification purposes. The tracer element selected shall be submitted to the qualifying activity for approval and shall be unique to each vendor. The vendor shall also provide the analytical test procedure which will be used to identivy the tracer element."

PAGE 4

Table I, Under Type V:
Porosity (Air pressure drop): Delete "20-30" and substitute "24-34".

Air pressure drop (Inches of water): Delete "0.250-0.330" and substitute "0.270-0.370".

Fluid retention (Volume - percent), Fuel: Delete "4.5 (Max)" and substitute "5.0 (Max)".

PAGE 7

*4.3.2, line 7: Delete "MIL-T-27686" and substitute "MIL-I-27686".

PAGE 11

*4.6.4, lines 1 thru 7, (first thru fifth sentences): Delete and substitute "The pore size shall be determined by the air pressure drop technique specified herein. Two specimens for each production and lot sample shall be run. For qualification, three specimens shall be tested. The cylindrical specimen shall be 10 inches in diameter by 1 ± 0.02 inch thick, where the 1-inch dimension is in the height direction of the test section. For production and lot testing, the porosity test speciments shall be taken within the top and bottom three inches of the test section height (foaming height)."

PAGE 24

*6.1: Add:

"6.1.1 Electrostatic compatibility. The user is cautioned that due to their low electrical conductivity properties, the baffle materials covered by this specification can generate static electricity during certain aircraft fuel system operations. Electrostatic discharges can be generated when fuel or a fuel/air mixture (mist) is directly impinged upon the foam. This charging mechanism is more conducive when the fuel has a low electrical condutivity property. Special consideration should be given when designing the foam kit to ensure that direct impingement of fuel or fuel/air mixture is eliminated. Electrostatic compatibility of the foramkit design should be verified through tests using a turbine fuel with low electrical conductivity properties."

PAGE 25

* Concluding material, Reviw Activity: Add "Army -AV, MR".

"The margins of this amendment are marked with an asterisk or vertical lines to indicate where changes (additions, modifications, corrections, deletions) from the previous amendment wer made. This was done as aconvenience only and the Government assumes no liability whatsoever for any inaccuracies in these notations. Bidders and contractors ar cautioned to evaluate the requirements of this document based on the entire content irrespective of the marginal notations and relationship to the last previous amendment."
