1/ Each relay possesses high level and low level capabilities. However, relays previously tested or used above 10 mA resistive at 6 V dc maximum or peak ac open circuit are not recommended for subsequent use in low level applications.

2/ The suffix letter L, M, P, or R to designate the applicable failure rate level shall be added to the applicable listed dash number. Failure rate level (percent per 10,000 cycles): L, 3.0; M, 1.0; P, 0.1; R, 0.01.
Example, 001L - - - -027R.

3/ CAUTION: The use of any coil voltage less than the rated coil voltage will compromise the operation of the relay.

	M39016/37-018	2 units, qualification inspection table, group II and shock, vibration, acceleration, terminal strength, and seal.

1/ For retention of qualification or extension of qualification to lower failure rate levels, all life test data accumulated on MIL-PRF-39016/38 may be used in addition to MIL-PRF-39016/37 data. Prior to performance of retention of qualification testing; the relay manufacturer shall preselect the sample size.

2/ The number of units required for qualification testing shall be increased as required in group V, table II, MIL-PRF-39016, if the relay manufacturer elects to test the number of units permitting one or more failures. Prior to performance of retention of qualification inspection testing; the relay manufacturer shall preselect the sample size.

QUALIFICATION INSPECTION (reduced testing): See table III.

If the relays produced for MIL-PRF-39016/37 are similar in construction and design except for the steering diode and coil to the relays produced for MIL-PRF-39016/38, then reduced testing for qualification of MIL-PRF-39016/37 relays may be performed concurrent with or subsequent to successful qualification of MIL-PRF-39016/38 relays.
