DATA ITEM DESCRIPTION

Form Approved
OMB No. 0704-0188

Public reporting burden for this collection of information is estimated to average 110 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302, and to the Office of Management and Budget, Paperwork Reduction Project (0704-0188), Washington, DC 20503.

1. TITLE	2. IDENTIFICATION NUMBER
DEEP SPACE SENSOR TASKING RESPONSE REPORT	DI-MISC-80353A

3. DESCRIPTION/PURPOSE

3.1 This report has been established to provide addressees an indication of the sensor's response to tasking. It is used for the preparation of briefings and analytical reports.

4. APPROVAL DATE (YYMMDD)	5. OFFICE OF PRIMARY RESPONSIBILITY (OPR)	6a. DTIC APPLICABLE	6b. GIDEP APPLICABLE
901001	F/AFSPACECOM-1SWG/DOOS		

7. APPLICATION/INTERRELATIONSHIP

7.1 This data item description contains the format and content preparation instructions for the data product generated by the specific and discrete task requirement as delineated in the contract.

7.2 This DID supersedes DI-MISC-80353.

8. APPROVAL LIMITATION	9a. APPLICABLE FORMS	9b. AMSC NUMBER
		F5016

10. PREPARATION INSTRUCTIONS

10.1 Format and Content. The Deep Space Sensor Tasking Response Report (DSSTRR) shall be in message format. The tracking period begins and ends with 12 degrees solar depression (nautical twilight). All times shall be in ZULU. The report shall contain the data listed below.

10.1.1. Part 1. - Reporting period. Specify the applicable period of the report by day, month, and year followed by the Julian day of the year in parentheses.

10.1.1.1. Section A. Specify the total number of observational minutes for multiple instruments optical sites. This is the time in the basic observational period multiplied by the number of instruments available. In parenthesis, list the observational period START and STOP times.

10.1.1.2. Section B. List, in time ordered sequence, the site weather status for the observational period. Report the weather status RED, YELLOW, GREEN, the percent of clear skies, and the effective minutes in each status. Make entries for each 20 percent change in cloud cover. GREEN is defined as 75 percent to 100 percent clear; YELLOW is from 1 percent to 74 percent clear; RED is less than one percent.

(continued on page 2)

11. DISTRIBUTION STATEMENT

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

Check the source to verify that this is the current version before use.

Block 10. Preparation Instructions (continued):

10.1.2. Part 2. Metric tasking. This part summarizes the site's response to metric tasking from the Space Surveillance Center (SSC) for objects the site received element sets (elsets) and look angles. Part 2 has two sections with entries being determined by the tasking priority:

10.1.2.1. Section A - Categories (CAT) 1 and 2, and all search(es) tasking:

a. Column 1 - SATNO. List the SSC satellite numbers in descending order for which the site received tasking.

b. Column 2 - CAT. List the specific category and suffix of SSC and Joint Space Operations Intelligence Center (JSIC) tasking.

c. Column 3 - REQ. List the total number of tracks that were required for each object to satisfy tasking. Make entries to show if the object was visible to the site. Explain in the remarks column those objects that required lower than normal elevation limits.

d. Column 4 - SCH. List total tracks scheduled for each object.

e. Column 5 - ATT. List total tracks attempted on each object. An attempt consists of all actions taken to detect the tasked object.

f. Column 6 - ACQ. List total tracks acquired on each object.

g. Column 7 - NOT/RMKS. List the applicable NOT tracked code for each SSC tasked object where tasking was not satisfied. List only one NOT code for each unsatisfied track. Make remarks for objects not acquired and indicate which objects are significantly off their predicted point. "Significantly off" is defined as a delta time of 2 minutes or more between the SSC elset and the actual position of the object.

h. Totals - Total columns 3 through 7. Total the NOT tracked codes for each specific code.

10.1.2.2. Section B - Categories 3, 4 and 5 tasking.

a. Column 1 - CAT. List only the specific category of SSC tasking. The status when the track occurred applies.

b. Column 2 - REQ. List total tracks required in each category.

c. Column 3 - SCH. List total tracks scheduled in each category.

d. Column 4 - ATT. List total tracks attempted in each category.

Check the source to verify that this is the current version before use.

Block 10. Preparation Instructions (continued):

e. Column 5 - ACQ. List total tracks acquired in each category.

f. Column 6 - NOT/RMS. List the NOT tracked codes as applicable by category.

g. Totals - Total columns 2 through 6. Total the NOT tracked codes for each specific code.

10.2.3. Part 3 - Summarize the sites response to SOI tasking received from the SOIC using two sections.

10.2.3.1. Section A. Report tasking response using the same column format as Part 2 of paragraph 10.1.2 of this DID, except that the RMKs section specifies either transmitted (XMTD) or held on site (HOS) for each acquired object with other remarks.

10.2.3.2. Section B. Summary the signature data sent:

a. Column 1 - SATNO. List the SSC object number for each signature sent.

b. Column 2 - SIGD. List the date and time of the start and end of each of the signatures collected for the JSIC.

c. Column 3 - SECT. List the total number of sections in each signature that was sent to the JSIC.

10.2.4. Part 4 - Remarks. Explain site peculiar problems that affected response to tasking or report items of interest that would be beneficial to other sites or higher levels of command. Include a brief summary of corrective maintenance that caused lost tracks, with the time blocks and affected equipment. Include the specific Daily Equipment Status Summary:

a. Date and acceptability of last focus frame.

b. Moonrise or set and age.

c. Number of unknown objects acquired.

d. Total number of data lines forwarded.
