MIL-O-24312B(SH)
16 September 1987
SUPERSEDING
MIL-O-24312A(SHIPS)
30 June 1969
(See 6.4)

MILITARY SPECIFICATION

OPERATIONAL STATIONS BOOK (OSB)

This specification is approved for use within the Naval Sea Systems Command, Department of the Navy, and is available for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This specification sets forth Naval Sea Systems Command (NAVSEA) requirements for an Operational Stations Book (OSB), employed to describe how the ship's personnel operate within the shipboard operational systems, for the establishment of team training of military personnel (not individual operator training) within described operational spaces and stations and as a historical record of the design philosophy intended by the designer, or the effect of the design upon operations.

1.2 Classification. OSBs shall be of the following types, as specified (see 6.2.1):

Type I
Type II

2. APPLICABLE DOCUMENTS

2.1 Government documents.

2.1.1 Specification and standard. The following specification and standard form a part of this specification to the extent specified herein. Unless otherwise specified, the issues of these documents shall be those listed in the issue of the Department of Defense Index of Specifications and Standards (DoDISS) and supplement thereto, cited in the solicitation.

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Commander, Naval Sea Systems Command, SEA 55Z3, Department of the Navy, Washington, DC 20362-5101 by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

AMSC N/A AREA TMSS

DISTRIBUTION STATEMENT A Approved for public release; destribution unlimited

Check the source to verify that this is the current version before use.

SPECIFICATION

MILITARY

MIL-M-38784 - Manuals, Technical: General Style and Format Requirements.

STANDARD

MILITARY

MIL-STD-129 - Marking for Shipment and Storage.

2.1.2 Other Government documents and publications. The following other Government documents and publications form a part of this specification to the extent specified herein. Unless otherwise specified, the issues shall be those in effect on the date of the solicitation.

PUBLICATIONS

NAVAL SEA SYSTEMS COMMAND (NAVSEA)

0900-LP-005-1010 - Technical Manual for Design Work Study.
0900-LP-098-7010 - Manual for Design and Development of Shipboard Command, Control and Combat Systems.

U.S. GOVERNMENT PRINTING OFFICE

STYLE MANUAL

(Application for copies should be addressed to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.)

(Copies of specifications, standards, and publications required by contractors in connection with specific acquisition functions should be obtained from the contracting activity or as directed by the contracting officer.)

2.2 Other publication. The following document forms a part of this specification to the extent specified herein. Unless otherwise specified, the issues of the documents which are DoD adopted shall be those listed in the issue of the DoDISS specified in the solicitation. Unless otherwise specified, the issues of documents not listed in the DoDISS shall be the issue of the nongovernment documents which is current on the date of the solicitation.

UNIFORM CLASSIFICATION COMMITTEE AGENT

Uniform Freight Classification Ratings, Rules and Regulations

(Application for copies should be addressed to the Uniform Classification Committee Agent, Tariff Publication Officer, Room 1106, 222 South Riverside Plaza, Chicago, IL 60606.)

(Nongovernment standards and other publications are normally available from the organizations which prepare or which distribute the documents. These documents also may be available in or through libraries or other informational services.)

Source: https://assist.dla.mil -- Downloaded: 20261O-19T21:19Z
Check the source to verify that this is the current version before use.

2.3 Order of precedence. In the event of a conflict between the text of this specification and the references cited herein (except for associated detail specifications, specification sheets or MS standards), the text of this specification shall take precedence. Nothing in this specification, however, shall supersede applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 General. In order to develop and maintain the greatest effectiveness and efficiency in the design of new shipboard integrated combat systems, the improvement (modernization) of older systems, and the development of their associated documentation requirements, work study procedures employ analytical techniques to establish and optimize relationships between components of the shipboard operational system - human factors, equipment factors and interfacing software support requirements, and operational concepts and environments. The OSB shall describe these relationships with particular attention to:

(a) The operational (rather than the technical) system.
(b) The man, machine, software interface.
(c) Optimum system employment as developed through analytical techniques.
(d) Operating and system set-up procedures for all modes of operation, including casualty conditions and special evolutions applicable to the system.
(e) Rationale, including work study, to support the system design concept and the developed operational procedures.
(f) Sequenced, step-by-step, operator procedures, and operator actions or interactions (see figures 1 and 2).
(g) Manning requirements for conditions I and III, the governing readiness condition (if other than conditions I and III), special sea detail, and predominate special evolutions (for example, underway replenishment, vertical replenishment, and so forth) (see figure 3).
(h) Special skills, knowledge, or training required to operate the system.
(i) Providing a source of information not readily available from other sources.

3.1.1 Space applicability. When specified (see 6.2.1), the OSB shall define and describe the relationships of shipboard operational systems and system components for the spaces. The size, mission and tasks of the ship shall be used to determine the shipboard spaces, stations, and systems to be included in the OSB. Spaces and stations specified as follows are typical of those which may be considered for inclusion in the OSB:

(a) Pilot house and bridge wings (including exposed and auxiliary conning stations).
(b) Chart room.
(c) Signal station and signal bridge.
(d) Secondary conning station.
(e) Weapons control stations.
(f) Flag bridge and command and control complex (including tactical flag command center).

Source: https://assist.dla.mil -- Downloaded: 2026-04-19T21:19Z
Check the source to verify that this is the current version before use.

(g) Combat information center complex (including sonar control room, antisubmarine warfare module and central computer complex).
(h) Meteorological spaces and stations.
(i) Operational intelligence spaces.
(j) Communications complex.
(k) Engineering and machinery monitoring and control stations.
(l) Damage control stations.
(m) Spaces in which special evolutions are carried out, such as:

(1) Aircraft operation control (fixed and rotary wing).
(2) Aircraft handling and maintenance control.
(3) Amphibious and landing force command and control.
(4) Ammunition and cargo handling.
(5) Squadron ready rooms.
(6) Deck operations (such as handling of mine countermeasures equipment, replenishment, beaching equipment, rescue and salvage equipments).

Where essential for clarity and complete understanding of a described function or evolution, functional extensions of spaces specified shall be described.

3.2 Technical accuracy. Information shall represent exactly the operational system, equipment arrangement, space configuration and functions being described. Any technical, operational or functional inaccuracies or inconsistencies shall constitute reason for rejection or revision of the OSB.

3.3 Ensurance of complete and up-to-date data. Information contained in an OSB shall be checked against established Chief of Naval Operations, Department of the Navy (CNO) manning authorizations, actual shipboard equipment lists (such as drawings, specifications, ship characteristics and mock-ups), latest shipboard arrangement configurations, and documented information sources, immediately prior to submission for review and approval (see 3.14.1).

3.4 Preparation. Unless otherwise specified herein, the OSB shall be prepared in accordance with the data ordering documents included in the contract or order (see 6.2.2) and the requirements specified in MIL-M-38784. The OSB shall be prepared by personnel who are:

(a) Knowledgeable in shipboard operational procedures.
(b) Knowledgeable in design work study techniques.
(c) Knowledgeable in interior and exterior communications systems.
(d) Knowledgeable in software support of integrated combat systems (as applicable to the system being described).

3.4.1 Preparation techniques. The OSB shall be prepared in consonance with the application of design work study techniques employed in the early stages of design, to the degree specified by the NAVSEA Program/Project Manager, to assure functional and operational accuracy. Where the application of design work study techniques is not specified by the NAVSEA Program/Project Manager in the design stages, an adequate level of design work study, as specified in NAVSEA 0900-LP-098-7010, shall be employed in the development of operator logic flow process charts, as a minimum (see 3.1(f) and 3.10.4.2.2.2). Primary applicable design work study techniques are:

Source: https://assist.dla.mil -- Downloaded: 20260-19T21:19Z
Check the source to verify that this is the current version before use.

(a) Functional analysis
(b) Functional flow diagrams (FFD)
(c) Operational sequence diagrams (OSD)

3.4.2 Level of writing. The OSB shall be written to the level of system managers, supervisors and operators having previous experience in the operation of similar or related systems and equipment.

3.5 Layout. The OSB layout shall provide for ease of use so that it may be directly promulgated as ship's doctrine. The OSB shall be in loose leaf form so that parts may be separated from the basic publication for use by individual operators.

3.5.1 Binding. The type I OSB, 1-1/2 inches or less in thickness, shall be bound with card stock cover front and back, slot punched and secured by plastic spiral (GBC). Type I OSBs greater than 1-1/2 inches in thickness shall be secured by means of three post-type binders. The type II OSB shall be bound in plastic or pressboard cover and secured by means of three post-type binders. Outline OSBs, when specified, shall be bound with card stock front and back covers and secured by either heavy duty staples or plastic spiral (GBC).

3.5.2 Page size. The OSB page size shall be 8-1/2 by 11 inches. Foldouts shall be kept to a minimum. To eliminate or minimize the size of foldouts, reduced scale drawings or documentation shall be used wherever practicable.

3.5.3 Sheet and page use. Information shall be printed on the front and back of sheets. Chapters and sections shall start on the front of a new sheet. Operational position descriptions and operator sequences shall start on the front of a new sheet and continue front and back as required.

3.6 Numbering.

3.6.1 Publication. The OSB shall be identified by means of a publication number to be assigned at the time of manuscript submission (see 3.14).

3.6.2 Page. Cover and title page shall be unnumbered. Lower case Roman numerals (in sequence i, ii, iii, and so forth) shall be used in numbering front matter pages preceding chapter 1 (see 3.10). Pages of the OSB shall be numbered in a separate series in each chapter. Pages of a chapter shall be numbered in sequence with Arabic numerals beginning with 1. Each page shall be preceded by the number of the chapter (example: 7-15). Pages of an appendix shall be numbered in sequence with Arabic numerals preceded by the letter designation of the appendix (example: A-5). Foldout page numbers shall be so placed that they will be visible when the printed page is folded. Intentionally blank pages shall be given a number and so noted on the preceding page (example: 2-3 (2-4 blank)).

3.6.3 Illustrations and tables. Illustrations and tables shall be identified by use of figure numbers. Numbers shall be Arabic numerals and shall indicate the chapter in which the illustration or table appears (example: figure 1-3 would be the third figure in chapter 1).

3.6.4 Appendices. Appendices shall be identified in alphabetical order with a capitalized English letter.

Source: https://assist.dla.mil -- Downloaded: 2026-04-19T21:19Z
Check the source to verify that this is the current version before use.

3.6.5 Chapters. Chapters shall be numbered in sequence with Arabic numerals starting at 1. If more than one chapter is used, chapter 1 shall be the general chapter and subsequent chapters shall represent physical shipboard spaces or functional systems which may include more than one physical space (such as record communications and damage control).

3.6.6 Sections. If the chapter represents a physical space, sections shall be used to describe two or more functional areas. If the chapter represents a functional system, sections shall describe one or more included physical spaces. Sections shall be numbered in sequence with Roman numerals I through IX. Within chapters other than chapter 1, section I shall be the general section and subsequent sections shall represent a specific functional area of the ship. Where only one functional area is to be described, section numbering shall not be employed.

3.6.7 Paragraphs. Each paragraph number shall consist of two parts, each part separated by a hyphen. The first part symbolizing the section (or where no section is employed, the chapter (see 3.6.6)), the second part symbolizing the order within the section or chapter (example: Paragraph 2-01 would be the first paragraph in section II). Paragraph numbers shall be Arabic numerals (in sequence) 01 through 99. In functional areas, paragraphs "01 through 09" shall be reserved for general information and paragraphs "10 through 99" shall represent positions within an area.

3.6.8 Article numbers. Article numbers and titles shall be used to identify operational positions and other paragraphs within the text as appropriate. The number assigned to a particular article indicates the chapter, section (in the absence of a section, zero shall be used in the section position of the article number) and paragraph in which the article is contained. To cite several articles in a series, reference shall be made by linking article numbers with a dash (example: articles 7711-7715). Article numbers within a series of numbers shall be accounted for. Where an article number is not used, a notation shall be made denoting "There is no article number - - -" (dashes denote missing article). An appendix with a number of articles and sections shall be numbered using the foregoing numbering system, except that a capital English letter corresponding to the appendix identification shall precede the number (example: A-7710).

3.6.8.1 Subparagraph numbering. Article subparagraphs are identified following the article number, for example: The number 7401.2a(1) indicates chapter 7, section IV, paragraph 01, subparagraph 2a(1).

3.7 Contents. The contents shall be limited to information required by the user (operator) to understand and carry out the required functions of the shipboard operational system. Only major functional units of equipment shall be included in the OSB. The contents shall be organized in a form so that only those changes which affect the ships functional operations will require revision to the OSB. To avoid the requirement for minor revisions, the following shall not be included in the OSB:

Source: https://assist.dla.mil -- Downloaded: 202610-19T21:19Z
Check the source to verify that this is the current version before use.

(a) Specific military designations for equipment or system nomenclatures (use of general terms is intended).
(b) Course numbers for service schools or correspondence courses.
(c) Specific characteristics of the ship, systems, or equipment.
(d) Listings of items such as equipment, systems, or armaments.
(e) Equipment operating instructions contained in technical manuals.

3.7.1 Classified information. Wherever possible, the OSB shall be void of classified material. Information classified higher than confidential shall not be included in the OSB. Confidential material shall be kept to a minimum and, if possible, shall be assembled in an appendix or other division of the OSB, for ease of identification, removal, and separate distribution where desired. In addition to the classified security markings which shall be in accordance with the requirements specified in MIL-M-38784, each page which is classified shall have each paragraph on that page identified by its classification by use of a capitalized English letter indicating the classification, enclosed in parentheses: example, (U) or (C). If the OSB is classified, the list of effective pages (see 3.9.5) shall identify the pages which are classified.

3.7.2 References. Where references to other documents are required, they shall be treated as follows:

(a) Where a small amount of information is needed, the applicable material may be extracted and condensed.
(b) A large amount of material shall be referenced fully, including the title of the publication, the publication number, and reference to volume, part, chapter, section, figure, table, and paragraph.
(c) Where reference is to an entire content of another document, the reference shall be only to the title of the publication and the publication identifying number.

3.7.3 Symbology. The symbology employed on the contents of the OSB shall be standardized to those used in accordance with NAVSEA 0900-LP-005-1010. It is extremely important that the OSB users have a thorough understanding of the meaning and use of the various symbols. Symbols not only provide the design engineer a means of examining the numerous operational tasks to be performed, but once established, if properly interpreted and employed, the symbols greatly facilitate and simplify operator training and user understanding of the functions to be performed. The symbols to be employed in the OSB to denote actions shall be as specified in 3.7.3.1 through 3.7.3.7 and sequential employment of symbology shall be as shown on figures 1 and 2.

3.7.3.1 Transport. An open arrow shall be employed to denote movement of personnel material, or transfer of information (see figure 1).

3.7.3.2 Operation. An open circle shall be employed to denote an operation performed (see figure 1).

3.7.3.3 Inspection. An open rectangle shall be employed to denote a test or examination (see figure 1).

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T21:19Z
Check the source to verify that this is the current version before use.

3.7.3.4 Mandatory actions. Solid line symbols shall be employed to denote mandatory actions. Solid lines connecting the symbols shall be employed to denote mandatory sequential actions (see figures 1 and 2).

3.7.3.5 Optional actions. Dash (broken line) symbols shall be employed to denote optional actions. Dash lines connecting symbols shall be employed to denote optional sequential actions (see figures 1 and 2).

3.7.3.6 Double symbols. Combined symbols shall be employed where the exterior symbol denotes the principal action and the interior symbol denotes the secondary action within the sequence of events (see figure 2).

3.7.3.7 Symbol identification. If identified, symbols for primary actions shall be sequentially identified for each type of action by means of numerically increasing Arabic numerals placed in the center of the symbols. Where symbols representing secondary actions are employed and identified, they shall be sequentially identified for each type of action alphabetically by means of small English letters placed in the center of the symbols (see figure 2).

3.8 Organization. The OSB shall be organized in the order specified and shall contain as a minimum the following divisions, as specified:

(a) Front matter

(1) Cover
(2) Title page
(3) Distribution list
(4) Foreword
(5) Symbol usage (if employed)
(6) List of effective pages
(7) Table of contents
(8) List of figures
(9) Record of changes
(10) Introduction
(11) Glossary of terms (if employed)

(b) Informative chapters

(1) Informative sections

(c) Appendices
(d) User activity comment sheets

3.9 Front matter. In addition to the requirements specified in MIL-M-38784, the OSB front matter shall conform to the requirements specified herein. In the event of conflict between MIL-M-38784 and the requirements specified herein, the requirements of this specification shall apply.

3.9.1 Cover and title page. The OSB cover and title page shall conform to the requirements of MIL-M-38784, except that no contractor shall be identified and the publication shall be titled as follows:

Source: https://assist.dla.mil -- Downloaded: 2026l0-19T21:19Z
Check the source to verify that this is the current version before use.

(a) Type I or II OSB:

"TYPE I (or II)
OPERATIONAL STATIONS BOOK
FOR
(INDICATE SPECIFIC SHIP OR CLASS)
(VOLUME NO. IF MULTIPLE VOLUMES)
(OPERATIONAL AREA(S) OR SYSTEM DESCRIBED)
DATE"

(b) OSB outline:

"OUTLINE
OPERATIONAL STATIONS BOOK
FOR
(INDICATE SPECIFIC SHIP OR CLASS)
(OPERATIONAL AREA(S) OR SYSTEM DESCRIBED)
DATE"

3.9.2 Distribution list. Distribution lists shall be prepared indicating the recommended distribution of the OSB. The list shall contain specific activities designated to receive the OSB together with the number of copies each activity is to receive.

3.9.2.1 Type I OSB. The distribution list for a type I OSB shall be included as part of the accompanying cover letter. This list shall reflect the recommended activities for review, comments, and subsequent distribution of the approved type I OSB. A second distribution list shall appear in the body of a type I OSB in the order specified in 3.8, this list shall reflect and indicate that it is the recommended distribution for any succeeding type II OSB and the list shall be prepared in accordance with 3.9.2.2. A type I OSB shall normally be distributed as follows (see 6.2.1):

Activity	Copies
CNO	10
Surface, Submarine, or Naval Air Force Commanders (as appropriate)	10 each [1]
Fleet Training Commanders	10 each [1]
Other Services (as designated)	2 each
Fleet Computer Programming Center (if applicable)	2 each
Naval Military Personnel Command	10 [1]
Naval Sea Systems Command	5
Other Naval Systems Commands (if applicable)	5 each [1]
Applicable Naval Laboratories	2 each
Builders (for information, with the contract bid package)	2 each

[1] For further distribution as desired to subordinate or associate commands such as training activities, laboratories, or personnel research activities.

3.9.2.2 Type II OSB. A type II OSB shall contain a distribution list in the order specified in 3.8. A type II OSB normally shall be distributed as follows (see 6.2.1):

Source: https://assist.dla.mil -- Downloaded: 202610-19T21:19Z
Check the source to verify that this is the current version before use.

Activity	Copies
CNO	5
Surface, Submarine, or Naval Air Force Commanders (as appropriate)	10 each
Fleet Training Commanders	2 each
Other Services (as designated)	2 each
Fleet Computer Programming Center (if applicable)	2 each
Naval Military Personnel Command	3
Naval Sea Systems Command	12 [1]
Other Naval Systems Commands (if applicable)	5 each
Applicable Naval Laboratories	2 each
Applicable Active Fleet Ships	5 each
Naval Shipyards (as appropriate)	2 each
Supervisors of Shipbuilding (as applicable)	2 each
Applicable Naval Military Personnel Command Training Schools	2 each
Fleet Training Schools	2 each
Applicable Type Training Schools	5 each
Fleet Training Groups	2 each
Officer-in-Charge, Naval Manpower Engineering Center	2
Commanding Officer, Naval Publications and Forms Center, 5801 Tabor Avenue, Philadelphia, Pa. 19120	25 [2]

[1] Five for designation to Naval Sea Systems Design Work School and two for designation to Naval Sea Systems Technical Manual Library.
[2] Plus 10 for each ship with applicable installations due for commissioning (completion) within the next 2 years.

3.9.2.3 OSB outline. No formal distribution list is contained in an OSB outline (see 3.13.2).

3.9.3 Foreword. A standard foreword conforming to figure 4 shall be included in the OSB and shall be in the order specified in 3.8.

3.9.4 Symbology page. Symbology where employed in the OSB, shall conform with the requirements of 3.7.3. In order that personnel have the occasion to use the OSB have an understanding of the meaning and use of the various symbols, standard symbology usage information conforming to figures 1 and 2 shall be included in the OSB, in the order specified in 3.8.

3.9.5 List of effective pages. The list of effective pages shall be in accordance with MIL-M-38784, except where the OSB is classified. The list of effective pages shall have a note to the effect that "upon removal of classified pages, the OSB shall be unclassified" and the classified pages shall be listed or identified within the list of effective pages, when classified pages are included.

3.9.6 Record of changes page. The record of changes page shall be incorporated within the OSB for the recording of all issued change authorizations subsequent to promulgation of the OSB.

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T21:19Z
Check the source to verify that this is the current version before use.

3.9.7 Table of contents. The table of contents shall list all of the divisions of the OSB, including front matter, chapters, sections, primary articles and appendices. The divisions shall be identified by their titles, page numbers, and where appropriate, by the article number.

3.9.8 List of figures. The list of figures shall list all figures contained in the OSB. The figures shall be identified by their figure number, title and associated page number.

3.9.9 Introduction. The OSB introduction shall state the purpose of the OSB, and its intended use. The introduction shall, as a minimum, include the following:

(a) A short explanation of the design philosophy used to develop the operational system.
(b) A brief description of the design criteria that optimized the procedures and minimized the manning requirements within the configuration.
(c) A statement indicating that the procedures were developed within the arrangement according to analytical techniques, and that any changes in the arrangement might severely hamper the effectiveness and efficiency of the system.
(d) An explanation as to why this configuration, with the operational procedures contained in the OSB, benefits the operator. A statement shall be included to the effect that the operator was given prime consideration throughout the development of the procedures presented.

3.9.10 Glossary of terms. A glossary of terms shall be included in the order specified in 3.8, if employed, and shall provide the proper name for all abbreviations used throughout the OSB.

3.10 Text development. The OSB shall contain only essential information and shall be factual, specific, concise, comprehensive, and unambiguous. It shall be so clearly worded as to be readily understandable at levels specified in 3.4.2. The U.S. Government Printing Office Style Manual shall be used as a general guide for capitalization, punctuation, compound word forms, numerals in text, and spelling. The OSB shall be developed with particular attention to requirements of 3.1 and 3.7.

3.10.1 Development guidance. Sample OSB for use as guidance in the preparation of an OSB and technical direction shall be provided by NAVSEA upon request.

3.10.2 Type I OSB. A type I OSB shall normally be prepared during the later stages of concept design or early in the preliminary design stage. It shall be developed prior to detailed design and shall be used for:

(a) Guidance and development of a subsequent type II OSB.
(b) Computer programming.
(c) Manning and training determinations.
(d) Ship design modifications.
(e) Operational forces comments.
(f) Design approval documentation.

Source: https://assist.dla.mil -- Downloaded: 20261O-19T21:19Z
Check the source to verify that this is the current version before use.

3.10.3 Type II OSB. A type II OSB shall normally be prepared during ship construction or for a major modification. For operating ships, with systems in existence or to be immediately modified, a type II OSB is appropriate. In the development of the type II OSB, previously developed documentation shall be utilized. Where a Ship and System Operational Manning and Maintenance Data Document (or similarly titled document) or a type I OSB has been prepared, these documents shall be employed to develop the type II OSB. A type II OSB shall normally be finalized within 90 days subsequent to post shakedown availability or completion of a major modification.

3.10.3.1 Guidance documentation available. Where a type I OSB is available, the following shall be considered in modifying the type I OSB for use in the development of a type II OSB:

(a) The rationale supporting the original design.
(b) Modification of equipment.
(c) Expansion or reduction of operational positions, spaces or stations.
(d) Characteristic changes.
(e) Computer programming changes.
(f) Type I OSB comments or other design review comments and recommendations.
(g) Revised or new personnel data.
(h) Revised or new training requirements data.

3.10.3.2 No guidance documentation. Where a type I OSB is not available, the type II OSB shall be prepared utilizing analytical techniques - a work study shall be conducted. The work study shall be constrained and limited by a given set of equipment and a fixed arrangement. The study will ensure optimization of procedures presented in the OSB without modifying the existing equipment configuration. Recommendations for changes to fixed arrangements shall be submitted to the NAVSEA Program/Project Manager for consideration in future designs.

3.10.3.3 Coordination. Overall coordination of a type II OSB shall be provided by the NAVSEA Program Manager. Primary assistants to the NAVSEA Program Manager will be the technical coordinator for either engineering spaces and systems, or the coordinator for Command and Control/Combat Systems and spaces, as appropriate.

3.10.4 Informative chapters. The first page of each chapter shall provide a list of sections and the primary articles therein listed with titles and page numbers.

3.10.4.1 Chapter 1 (general information). If the OSB covers several major systems, this chapter shall include general information on the overall operational concepts of the ship, to include:

(a) Missions and tasks (if this can be published as unclassified information).
(b) General characteristics which were developed by design work study techniques in the design layout of the ship and which are not covered in subsequent chapters, such as the relationship of areas to each other.

Source: https://assist.dla.mil -- Downloaded: 20260-19T21:19Z
Check the source to verify that this is the current version before use.

(c) Operational concepts of the ship indicating the major functions to be performed and the interrelationship of the areas to be covered in subsequent chapters.

3.10.4.2 Other chapters. Each chapter following chapter 1 shall describe a specific physical area (space or station) on the ship. Modularized (functional) areas within a space shall be presented in sections of the chapter. For those spaces which are not described by use of functional areas, all information shall be described in the chapter without section numbering. The requirements of 3.10.4.2.2.1 shall be presented in the general articles and the requirements of 3.10.4.2.2.2 shall be presented in the other articles of this unsectionalized chapter.

3.10.4.2.1 Section I (general information). Section I shall be the general section and shall provide general information on its subject space. The articles contained in this chapter shall be numbered: -101 through -199 (dashes denote the number of the appropriate chapter). As a minimum, the general section shall include:

(a) General functions within the overall space.
(b) Operation and supervision of the space, describing any variations for special evolutions or conditions, including emergencies and casualties.
(c) Team training required for the personnel manning of the space, in general terms unless specific requirements are furnished by the Government (in all cases specific course numbers shall be avoided).
(d) List of functional areas within the space (indicating the section of the chapter for the area described).
(e) Operational aids required in the area (for example, publication records, reports, and portable equipment).
(f) Diagram of the space showing areas (labeling functional areas by name and referencing the applicable OSB section number) (see figure 5).
(g) Where applicable, a matrix indicating which areas are manned under each operational condition or evolution.
(h) Key plan of the space showing its location within the ship. (see figure 6).

3.10.4.2.2 Other sections (describing modular areas).

3.10.4.2.2.1 General articles. General articles shall provide general information on the modular (functional) area described by the parent section. General articles shall be numbered: --01 through --09 (dashes denote the number of the appropriate chapter and section). As a minimum the general articles shall describe the following:

(a) General functions within the area.
(b) Operation and supervision of the area, describing any variations for special evolutions or conditions, including emergencies and casualties.
(c) Team training required for personnel manning the module, in general terms unless specific requirements are furnished by the Government.
(d) List of operational positions within the area (indicating the article in which the operational position is described).

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T21:19Z
Check the source to verify that this is the current version before use.

(e) Operational aids required in the area (for example, publication records, reports, and portable equipment).
(f) Diagram of the area showing the following:

(1) Ship centerline with forward arrow, if applicable, and major frame numbers.
(2) Major equipment.
(3) Positions manned during evolutions with maximum manning (labeled by the article describing the position).
(4) Tabulation of station article numbers with corresponding operational position titles for the evolution depicted.
(5) If feasible, within areas with repetitive operations (for example, communications space), major flow of information indicated by a line with an arrow (labeled with the method of transmission and circuit, if applicable).

(g) Manning matrix indicating which positions (by position name and article number versus evolutions) are manned during each evolution. As a minimum manning for readiness conditions I and III, special sea detail, and the controlling special evolution (for example, flight quarters, underway replenishment, and so forth), as applicable to the space or area depicted shall be listed. An "X" shall be used to indicate that the position is manned, a "-" shall be used to indicate that the position is not manned, an "O" shall be used to indicate optional manning, and "W/R" shall be used to indicate manned when required (see figure 3).

3.10.4.2.2.2 Other articles. Other articles shall describe specific operational positions. These articles shall be numbered: --10 through --99 (dashes denote the number of the specific chapter and section). As a minimum these articles shall describe the following:

(a) Name of operational position.
(b) Station and equipment manned.
(c) When manned.
(d) General training requirements for manning the position or equipment shall be indicated unless specific requirements are provided by the Government, in which case the specific requirements shall be described. Training requirements shall include:

(1) Schools or course descriptions (not titles or numbers).
(2) Reference publications for study. Naval Warfare Publications (NWP) and similar authoritative publications may be included, but reference to specific manuals or instructions, by the exact title or number shall be avoided.
(3) If applicable, qualifications in other positions or jobs. If developed and provided by the command or agency concerned, qualification standards and or special skills for the position shall be included in this part of the text or as an appendix, whichever is appropriate.

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T21:19Z
Check the source to verify that this is the current version before use.

(e) Facilities (for example, communications and/or special tools or equipment) required in the position for carrying out duties. Where a selection of facilities is available, the facilities may either be referenced to those listed for the module or those for other positions in the module.

(f) Duties and responsibilities of the operational position, including a description of the operating procedures for the position, any variations for casualties, special evolutions or conditions. Command and control spaces, at least one alternate position (method) shall be indicated for a major casualty to the equipment at the position described. The description shall be thorough enough to cover the operational concepts, preparation of the equipment (tuning and watch standing routines), reports, and information sent and received including, where applicable, transmission methods (type of system and circuit nomenclature) and terminal equipment (handset, headset, keyset, speaker, and so forth). The description shall be simple, concise, readable, and not repeat information which is readily available through other publications or the previous training of the individual. Specific operating instructions for equipment (covered in manuals), procedures for communicating (covered by previous training) and responsibilities of such positions as commanding officer or officer-of-the-day (covered in current regulations and directives) shall not be specified. Duties which are applicable to the operational concepts of the system shall be specified. The operations shall be shown in a logic flow process chart.

3.11 Appendices. Where applicable, appendices shall be provided to present summations to clarify or assist ship personnel, as follows and as specified (see 6.2.1):

(a) Interior communications including an operational station versus circuit matrix identifying interior communications circuits and facilities available at each operational station and/or position within spaces or stations covered by the OSB. The matrix shall reflect operator position, circuit designation (by circuit name and designation), E-Call and selector facilities, and interphone capabilities for sound powered telephone systems, Naval Tactical Data System (NTDS) interphone facilities (CK), ship service telephones, announcing systems (for example, 1MC or 5MC), intercommunications systems (amplified voice) (for example, 21MC, 39MC, and so forth), voice tubes, pneumatic tube facilities, and Interior Voice Communication System (IVCS), or equal capabilities.

(b) Exterior communications including a matrix identifying remote exterior communications circuits and facilities available at each operational station or position within spaces or stations covered by the OSB. The matrix shall reflect operator position, circuit designation channel selection capability and whether the circuit is at a remote individual terminal, incorporated within an NTDS console or subconsole, or a capability within IVCS. Additionally, normal mode of operation (for example, guard or monitor) shall be indicated for that position located.

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T21:19Z
Check the source to verify that this is the current version before use.

The matrix shall indicate send or receive terminal locations for teletype equipment (for example, LINK 14) within Command and Control and Combat System spaces and stations.

(c) Interior and exterior communications NTDS console matrix reflecting interior (inclusive of amplified voice) and exterior communications capabilities at each NTDS console or subconsole within spaces or stations covered by the OSB, when extraction of such facilities from complex interior and exterior communications matrices will enhance readability.

(d) Check-off list for evolutions such as casualty control.

(e) Special tools (if a separate complete listing would be useful).

(f) Separation of classified information from the remainder of the text (see 3.7.1).

(g) Qualification standards if provided by the command or agency concerned and not part of the text (see 3.10.4.2.2.2(d)(3)).

3.12 User activity comment sheets. Three user activity sheets shall be provided for reporting deficiencies and constructive comments on the OSB. They shall be attached as the last three sheets of the OSB. The front of the comment sheet shall be as specified on figure 7. The printed portion of the sheets should be reduced as much as possible to provide the maximum space for written comments. The rear of the comment sheet shall have a format which can be folded in thirds, stapled, and mailed. It shall be preaddressed to Commander, Naval Sea Systems Command, Manning and Controls Integration Branch, Navy Department, Washington, DC 20362-5101, including franking.

3.13 Outline. As a minimum, an OSB outline shall consist of a complete draft of the proposed introduction and a condensation of the general chapter, and general sections of subsequent chapters which describe spaces and stations to be presented in the OSB. A text plan for the chapters and appendices shall be included and shall consist of identifying numbers and headings for the chapters, appendices, and associated divisions (sections, articles, and so forth). The outline shall be typewritten and furnished in the quantity specified in 3.13.2. The outline shall be provided with a cover document conforming to 3.13.1, except for outlines intended in support of mock-ups, and shall have all sheets bound together by means of staples. OSB outlines prepared in association with a mock-up as volume II of a two-volume mock-up booklet, or part II of a single-volume mock-up booklet, shall be provided without a cover document and furnished in the quantity specified by the NAVSEA Program Manager (see 3.13.2).

3.13.1 Cover document. The OSB outline cover document shall be written, using the contractor's letter format. The cover document shall provide the rationale used to develop the shipboard arrangement configuration presented in 3.13.2. As a minimum, this rationale shall include:

(a) Departures from CNO, NAVSEA, or other Navy standardization policies.

(b) Trade-offs accepted in developing the shipboard operational system.

(c) The concepts of operation under which the shipboard operational system was developed, if not included in the condensations indicated in 3.13.

(d) Recommendations.

Source: https://assist.dla.mil -- Downloaded: 202610-19T21:19Z
Check the source to verify that this is the current version before use.

3.13.2 OSB outline availability. Unless otherwise specified (see 6.2.1), 10 copies of the outline shall be submitted to the cognizant NAVSEA Program Manager prior to preparation of a type I or type II OSB. Where neither a type I nor type II OSB is available, and where the availability of an OSB outline is specified by the NAVSEA Program Manager in association with a mock-up review (see 3.13), 10 copies of the OSB outline shall be submitted to the cognizant NAVSEA Program Manager no later than 10 working days prior to the mock-up review date.

3.14 Manuscript. OSB manuscripts shall conform to the requirements of MIL-M-38784, except as otherwise specified hereafter.

3.14.1 Review and approval. The manuscript submittal shall also include a certificate, certifying that the contractor complied with 3.3. The reviewing and approval authority specified in 3.14.1.1 and 3.14.1.2 will issue appropriate manuscript approval.

3.14.1.1 Type I OSB. Unless otherwise specified (see 6.2.1), 10 copies of the type I OSB manuscript shall be submitted to the NAVSEA Program Manager at least 30 working days prior to scheduled associated contract drawing signature, or upon completion of the design work study, as applicable. The manuscript submittal shall include a recommended cover letter to be used in forwarding the type I OSB for review, comments, and recommendations.

3.14.1.2 Type II OSB. Unless otherwise specified (see 6.2.1), 10 copies of the type II OSB manuscript shall be submitted to the NAVSEA Program Manager approximately 1 year prior to completion of the ships under construction or conversion or at such other time as specified.

3.14.1.2.1 Approved manuscript. Ten copies of the approved manuscript (incorporating comments developed during the reviews, all approved design changes and modifications instituted during construction or conversion, and changes authorized as the result of post shakedown availability (PSA) or as approved upon completion of a major modification) shall be provided. The copies shall be available within 60 days subsequent to the PSA or completion of the conversion or major modification, or at such other time as specified (see 6.2.1).

3.15 Modification (updating). An OSB shall be updated to eliminate technical, operational, or functional inaccuracies or inconsistencies:

(a) Brought about by approved changes to the ship's operational system design.
(b) Discovered during indoctrination services.
(c) Discovered during validation or verification.

3.15.1 Type I OSB. The type I OSB manuscript shall be updated to incorporate comments developed during review and latest available installation information.

3.15.2 Type II OSB. The type II OSB manuscript shall be updated after verification, if required, or within 2 months after completion of the ship PSA or installation, whichever is latest.

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T21:19Z
Check the source to verify that this is the current version before use.

3.16 Completion. Immediately following approved manuscript updating specified in 3.15, the OSB shall be prepared in final form and distributed (see 3.9.2).

3.17 Indoctrination services. For a type II OSB, the contractor shall furnish engineering type indoctrination services utilizing personnel who are knowledgeable in the preparation of the OSB, in shipboard operational procedures, in shipboard systems, and in work study techniques. Where specified (see 6.2.1), these services shall be provided to the following:

(a) Ship's personnel for indoctrination and verification of the OSB.
(b) Navy training school instructors prior to training ship's personnel.
(c) Underway training personnel who will be concerned with the ship's personnel during shakedown, type, or refresher training.

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection requirements as specified herein. Except as otherwise specified in the contract or purchase order, the contractor may use his own or any other facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the Government. The Government reserves the right to perform any of the inspections set forth in the specification where such inspections are deemed necessary to assure supplies and services conform to prescribed requirements.

4.1.1 Responsibility for compliance. All items must meet all requirements of sections 3 and 5. The inspection set forth in this specification shall become a part of the contractor's overall inspection system or quality program. The absence of any inspection requirements in the specification shall not relieve the contractor of the responsibility of assuring that all products or supplies submitted to the Government for acceptance comply with all requirements of the contract. Sampling in quality conformance does not authorize submission of known defective material, either indicated or actual, nor does it commit the Government to acceptance of defective material.

4.1.2 Inspection system. The contractor shall provide and maintain an inspection system in accordance with the data ordering documents included in the contract or order (see 6.2.2).

4.2 Quality program requirements. The contractor shall provide and maintain a written quality program in accordance with the data ordering document included in the contract or order (see 6.2.2). The quality program shall be delineated in sufficient depth to assure that adequate and accurate data and procedures will be presented and that materials or services being prepared and furnished are in accordance with the requirements of this specification. The quality program shall, as a minimum, take into account such areas of concern as the following:

Source: https://assist.dla.mil -- Downloaded: 20260-19T21:19Z
Check the source to verify that this is the current version before use.

(a) Definition of authority, function and duties of those responsible for:

(1) Preparation and inspection.
(2) Providing and supervising indoctrination services.

(b) Designation of qualified personnel for:

(1) Preparation and inspection.
(2) Instructing and supervising the instructors during indoctrination services.

(c) Development, issuance, maintenance, and distribution of procedures.
(d) Coordination with the NAVSEA Program Manager or Project Manager (as appropriate), to assure that the latest data is used and that revisions are made concurrent with affected changes in requirements.
(e) Establishment of validation procedures, inspection points, and inspection criteria, and the conducting of these designated inspections to determine adequacy and accuracy during the development stages.
(f) Formal detailed review to assure adequacy of information and compliance with this specification for content, production, and distribution.
(g) During indoctrination services, where specified, conduct actual operational shipboard examinations of the content against the components of the ship's operational system to assure that the contents depict accurately and adequately the shipboard installation and relationships specified.

4.2.1 Quality assurance acceptance. Acceptance of the quality assurance program by the Command or agency concerned is not intended to preclude additions, refinements, or changes to the written quality program where evidence indicates the need for such action.

4.3 Items of support or submittal. The support and submittal items to be furnished as a part of the quality assurance program shall comprise the following unless otherwise specified by the approval authority (see 3.14.1):

(a) Validation plan (to be supplied upon request).
(b) In-process review.
(c) Validation effort.
(d) Verification support.

4.4 Validation plan. The validation plan shall, as a minimum, reflect the contractor's recommended procedures and scope of effort for implementing the requirements of 4.2.

4.5 In-process reviews. The OSB, draft stage or otherwise, and performance of indoctrination services, may be subjected to in-process reviews and inspections by the Government.

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T21:19Z
Check the source to verify that this is the current version before use.

4.5.1 In-process reviews shall normally be initiated by the approval authority (see 3.14.1) or by his authorized representative; however, reviews may be requested by the contractor when assistance or clarification is desired.

4.6 Validation. The object of validation is to assure that the contractor has expended his best effort to provide accurate and adequate information and services in accordance with the requirements of this specification. The contractor shall conduct validation tasks in accordance with the validation plan (see 4.4).

4.6.1 Certification report. Upon completion of the validation tasks identified by the plan, the contractor shall submit to the approval authority a letter, certifying that validation requirements have been satisfied.

4.7 Verification. Verification is a responsibility of the approval authority or authorized representative. The purpose of verification shall be to assure that the contractor's services are in conformity with the requirements of this specification.

4.7.1 Verification support.

4.7.1.1 During indoctrination services. Verification shall be scheduled concurrently with indoctrination services specified in 3.17. The contractor's verification support shall consist of the following:

(a) Prepare or assist in the development of verification schedule and plan.
(b) Record and maintain records of changes associated with performance of verification.
(c) Provide summary of verification actions.
(d) Update or make appropriate changes in procedures.

4.7.1.2 Other. During periods other than as specified in 4.7.1.1, the contractor's verification support shall consist of updating in accordance with written instructions from the approval authority.

4.8 Inspection of packaging. Sample packages and packs, and the inspection of the preservation-packaging, packing and marking for shipment and storage shall be in accordance with the requirments of section 5 and the documents specified therein.

5. PACKAGING

(The packaging requirements specified herein apply only for direct Government acquisition.)

5.1 Individual. Individual books or multi-volume books shall be packed to preclude the possibility of damage in shipment. Multi-volume books shall be furnished in complete sets.

5.2 Bulk shipment. Books to be shipped in bulk shall not be individually wrapped. Containers shall comply with the Uniform Freight Classification Rules or other carrier regulations as applicable to the mode of transportation.

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T21:19Z
Check the source to verify that this is the current version before use.

5.3 Marking. In addition to any special marking as required by this specification, marking shall be in accordance with MIL-STD-129.

5.3.1 For stock. The words "FOR STOCK" shall be marked on the package or packages destined for stock.

6. NOTES

6.1 Intended use. The OSB is intended to describe the ship's personnel operation within the shipboard operational systems.

6.2 Ordering data.

6.2.1 Acquisition requirements. Acquisition documents should specify the following:

(a) Title, number and date of this specification.
(b) Type of OSB (see 1.2).
(c) List of spaces to be included (see 3.1.1).
(d) Distribution, if other than specified in 3.9.2.1 and 3.9.2.2.
(e) List of specific appendices requirements (see 3.11).
(f) Outline due dates and quantities (see 3.13.2).
(g) Manuscript due dates (see 3.14.1.1 and 3.14.1.2).
(h) Approved manuscript availability dates, if other than as specified in 3.14.1.2.1.
(i) Indoctrination services required (see 3.17):

(1) Man-days required.
(2) Location of services.
(3) Periods of service.

(j) OSB completion date.

6.2.2 Data requirements. When this specification is used in an acquisition and data are required to be delivered, the data requirements identified below shall be developed as specified by an approved Data Item Description (DD Form 1664) and delivered in accordance with the approved Contract Data Requirements List (CDRL), incorporated into the contract. When the provisions of DoD FAR Supplement, Part 27, Sub-Part 27.475-1 (DD Form 1423) are invoked and the DD Form 1423 is not used, the data specified below shall be delivered by the contractor in accordance with the contract or purchase order requirements. Deliverable data required by this specification are cited in the following paragraphs.

Paragraph no.	Data requirement title	Applicable DID no.	Option
3.4	Book, operational stations	DI-H-23353	----
4.1.2	Inspection system program plan	DI-R-4803	----
4.2	Quality program plan (QPP)	DI-R-5297	10.1

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T21:19Z
Check the source to verify that this is the current version before use.

(Data item descriptions related to this specification, and identified in section 6 will be approved and listed as such in DoD 5010.12-L., AMSDL. Copies of data item descriptions required by the contractors in connection with specific acquisition functions should be obtained from the Naval Publications and Forms Center or as directed by the contracting officer.)

6.2.2.1 The data requirements of 6.2.2 and any task in sections 3, 4, or 5 of this specification required to be performed to meet a data requirement may be waived by the contracting/acquisition activity upon certification by the offeror that identical data were submitted by the offeror and accepted by the Government under a previous contract for identical item acquired to this specification. This does not apply to specific data which may be required for each contract regardless of whether an identical item has been supplied previously (for example, test reports).

SYMBOLOGY USAGE

Importance of symbols: The symbols employed in task descriptions contained in this book are those used in design work study technology. It is extremely important that OPERATORS, SUPERVISORS and all personnel who have occasion to use this book have a thorough understanding of the meaning and use of the various symbols. Symbols not only provide the analyst a means for examining the various tasks in the initial design work study but more importantly, used and interpreted properly, greatly facilitate and simplify OPERATOR training. Symbols employed in this book are as follows:

Transport. The movement of personnel, material or the transfer of information.

Operation. An operation performed.

Inspection. An examination or test.

FIGURE 1. Standard symbology.

Source: https://assist.dla.mil -- Downloaded: 2026-10-19T21:19Z
Check the source to verify that this is the current version before use.

System of notation:

Broken lines connecting symbols indicate an optional sequence. Action following a broken line need not be accomplished in the order it is placed in the text.

Solid lines connecting symbols indicate a mandatory sequence.

Broken line symbols indicate optional actions.

Solid line symbols indicate mandatory actions.

Reversed symbols indicate internal or external Transport

Internal Transport. Receipt of information or material from external source(s) or system(s).

External Transport. Generation of information or material to external source(s) or system(s).

Double symbols indicate combined actions:

An action implying first Inspection and second Operation. Exterior symbol denotes the principal action.

Example:

First primary Operation required to be performed. (Indicated by Arabic numerals sequentially within the symbols).

Second primary Operation required to be performed.

First Transport required to be performed.

First secondary Inspection. Lettered sequentially and indented out-of-line. Connected to [b] by broken line indicating that [a] and [b] need not be accomplished in order.

Second secondary Inspection.

Third primary Operation. (This is an example of symbology for an optional action).

Second primary Transport.

"FOREWORD"

The purpose of the Operational Stations Book (OSB) is to describe the operational relationships and procedures employed within the shipboard operational spaces and stations during the ship's maximum tactical environment and/or major evolutions which take into account the design philosophy utilized in space allocations and equipment arrangements within the ship. The book provides operational personnel with space orientation within the hull, space and station functional requirements, management philosophy, station manning requirements, responsibilities and operational procedures. The operational relationships and procedures described in the OSB are the product of both the design philosophy employed by the designer and verification by experienced Fleet personnel.

The basic organization and procedures for departmental and divisional spaces may be based on this book. The format has been prepared in such a manner that this book may be promulgated as doctrine for the spaces included.

This book is written to be used by all personnel concerned with personnel training, planning and operation of spaces included. It is intended to be used by ship's personnel for instruction, orientation, information, and ready reference for the operations described herein.

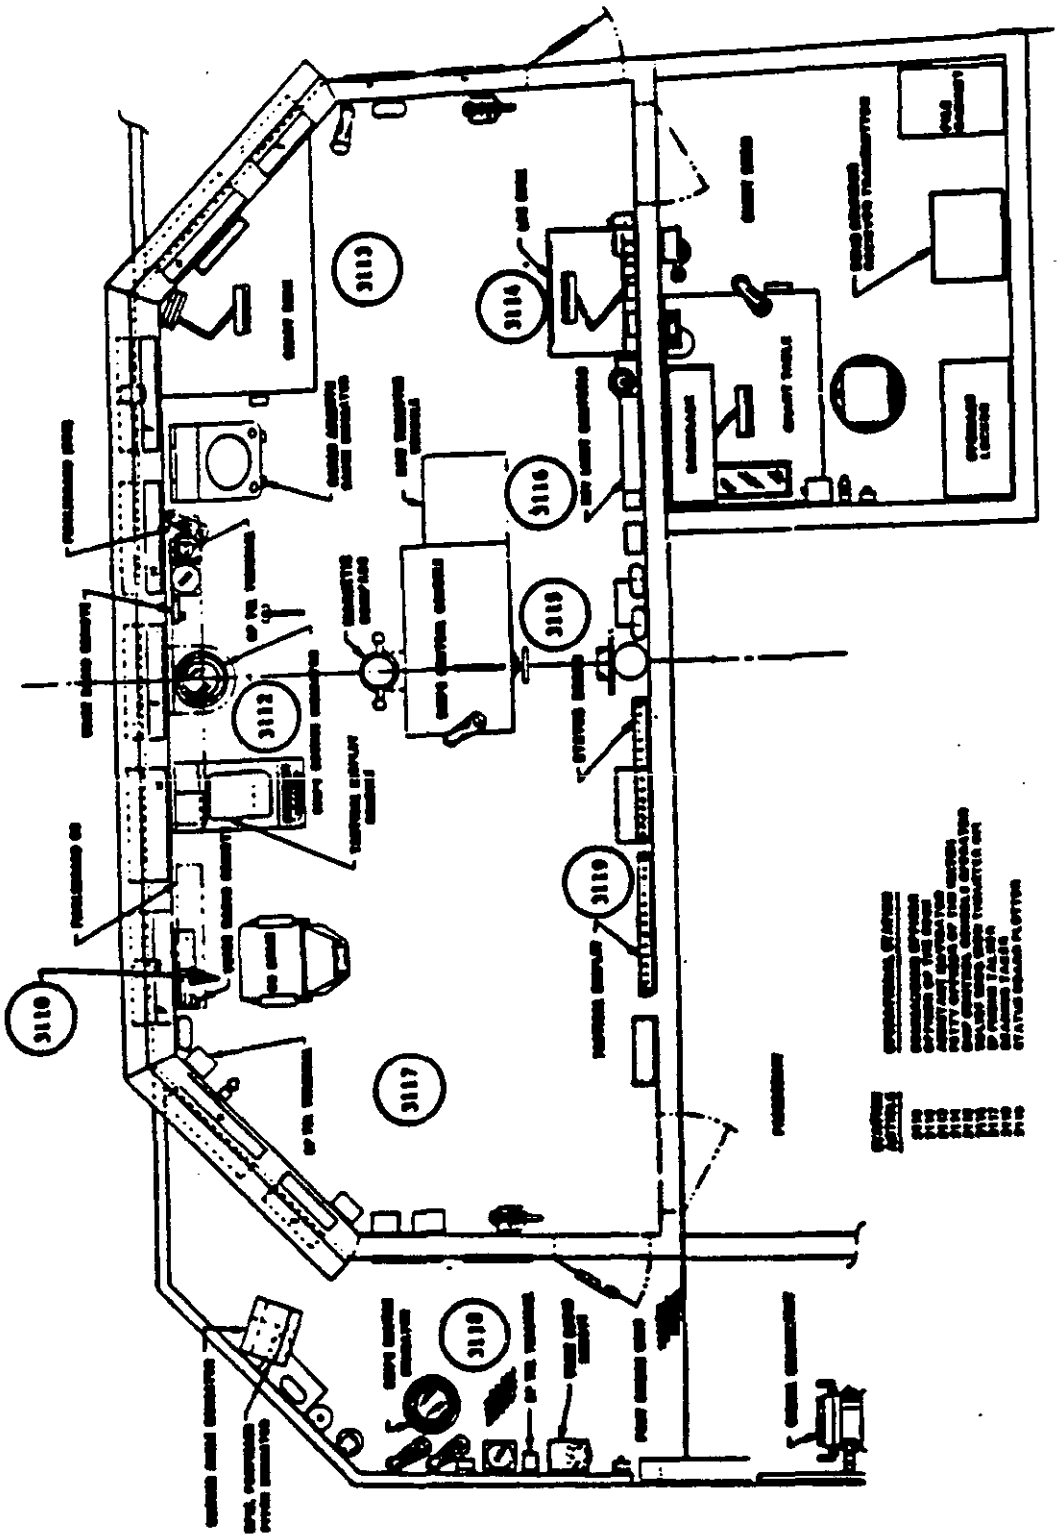

Operational concepts rather than technical descriptions have been emphasized. This book is not intended to duplicate technical information covered by equipment manuals or similar publications, nor is it intended as a substitute for individual operator training requirements. It is not intended that this book duplicate information which may be presented in the Combat System Technical Operations Manual (CSTOM) (if applicable), except to the extent required for continuity and thoroughness of understanding. Other guidance information can be obtained by referring to the Ship Information Booklet, Booklet of General Plans, Shipyard Plans, Technical and System Manuals, Naval Warfare Publications (NWP), and so forth.

Appendices (if included) are used to summarize or amplify such areas as the external or internal communications facilities employed in operating the spaces described in this book.

User Activity Comment Sheets (affixed at the rear of this book) are provided to report any possible deficiencies in this book or in the concepts presented. It is not desired that typographical errors be reported. Additional sheets may be reproduced locally. Comments should be forwarded directly to Commander, Naval Sea Systems Command, Manning and Controls Integration Branch, Department of the Navy, Washington, DC 20362-5101.

USER ACTIVITY COMMENT SHEET
For Operational Stations Book (OSB)

_____
(Print publication number)

This sheet is provided for obtaining information on the use of the OSB, and should be filled out by personnel involved in the use of this OSB.

It is desired that comments be concise and provide any known references. If possible, each comment should be accompanied by a recommended solution. Comments and the return of this form will be appreciated.

Fold on dotted lines on reverse side, staple in corner and mail to Commander, Naval Sea Systems Command, Manning and Controls Integration Branch, Department of the Navy, Washington, DC 20362-5101.

SUBMITTED BY (print name and activity): DATE:

INSTRUCTIONS: In a continuing effort to make our standardization documents better, the DoD provides this form for use in submitting comments and suggestions for improvements. All users of military standardization documents are invited to provide suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge *(DO NOT STAPLE)*, and mailed. In block 5, be as specific as possible about particular problem areas such as wording which required interpretation, was too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate the problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

NOTE: This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements.
