MIL-H-1071D
AMENDMENT-3
1 March 1978
SUPERSEDING
AMENDMENT-2
5 July 1977

MILITARY SPECIFICATION

HAM, CANNED, SLICED, COOKED, WITH JUICES

This amendment forms a part of Military Specification MIL-H-1071D, dated 17 December 1969, and is approved for use by all Departments and Agencies of the Department of Defense.

PAGE 2

2.2, line 10: Delete "AGRICULTURAL" and substitute "ANALYTICAL".

Delete all data below "US DEPARTMENT OF AGRICULTURE" and substitute

"Meat and Poultry Inspection Regulations

(Application for copies should be addressed to the Superintendent of Documents, Government Printing Office, Washington, DC 20402.)"

PAGE 3

* Table I, item 2: Delete and substitute "2 Hams shall be uncured".

Item 3, line 1, between first and second sentence add: "When fresh, the internal temperature at the thickest portion of the ham shall be in the temperature range 28°F (-2°C) to 40°F (4°C) prior to the start of processing. Alternatively, the internal temperature at the thickest portion of the hams shall be in a temperature range of 28°F to 46°F (-2°C to 8°C) inclusive at any time after initial chilling, following slaughter and prior to boning, and the hams shall be offered within 48 hours of the stated kill date as evidenced by a USDA kill date certificate."

Item 4, line 4: Delete "1-3/4 inches" and substitute "1 inch".

Item 5: Delete and substitute "5 Fresh bone-in regular hams shall weigh not more than 26 pounds."

3.2.2, line 3: Delete "Regulations Governing the Meat Inspection" and substitute "Meat and Poultry Inspection Regulations".

3.3 . Delete second sentence and substitute: "The cured ham shall be formed, sliced, cooked (fried, water, steam or oven) in any sequence. No rework ham rolls shall be used."

PAGES 4 and 5

* Table II, item 9: Delete and substitute "9 Total weight of heavy connective tissue, fat chunks, ligaments, tendons, blood vessels, and glandular material shall be not more than 1/2 ounce."

Item 10: Delete and substitute "There shall be no bone greater than 1/4 inch or cartilage greater than 1/2 inch in any dimension."

Add new item as follows: "10a Ligament, tendon, heavy connective tissue or large blood vessel greater than 1/2 inch in any dimension shall mash or show evidence of tissue (fiber) separation under a single application of pressure and a slight twisting motion from the convex surface of a standard teaspoon."

Item 11: Delete and substitute "11 The fat content shall be not more than 17 percent for any individual sample unit and the lot average shall not exceed 15 percent."

3.5: Delete and substitute "Plant qualification. The product shall originate, be processed, marked and handled in plants which are operated under the Meat and Poultry Inspection Regulations of the US Department of Agriculture."

4.2: Delete and substitute "Plant qualification conditions. The product furnished under this document shall be unacceptable if not produced and stored in plants which currently meet the qualification conditions of 3.5."

PAGE 6

4.3.1.1: Delete paragraph heading and substitute "Examination for temperature and freezer age requirement of frozen uncured hams."

4.3.1.2, line 2, after "table I": Delete remainder of paragraph and substitute "Nonconformance to one or more of the above referenced requirements shall be cause for rejection of the component lot."

Table III: Delete in its entirety.

PAGE 7

Table IV: Delete Major B and Minor AQLs pertaining to table V and table VI and substitute "2.5" and "10.0" and "2.5" and "6.5" respectively.

Line 4: Delete "S-4" and substitute "S-3".

PAGE 8

* Table VI, line 3, add: "Minor"

Defect "152": Change to "201".

Defect 153, line 2: Delete "152" and substitute "201".

Defects "155" and "156": Delete and substitute "155 Total weight of heavy connective tissue, fat chunks, ligaments, tendons, blood vessels and glandular material is more than 1/2 ounce. 3/
156 Presence of bone greater than 1/4 inch or cartilage greater than 1/2 inch in any dimension. 2/"

Add new defect as follows: "202 Ligaments, tendon, heavy connective tissue or large blood vessel greater than 1/2 inch in any dimension which does not mash or show evidence of tissue (fiber) separation under a single application of pressure and a slight twisting motion from the convex surface of a standard teaspoon. 2/ 5/"

Below table, add new footnote: "5/ The intent of this defect is to preclude material that cannot be easily chewed."

PAGE 9

4.3.5, line 4: Delete third sentence.

Line 8: Delete "4.0 for each characteristic" and substitute "6.5 and shall be applied to each requirement separately. In addition the lot shall be rejected if by using recognized statistical methods, the sample data indicate that the fat content is more than 15 percent on a lot average basis."

Line 9: Delete "defective" and substitute "a major defective unit".

4.4: Delete.

* 4.5, after "Test methods": Delete remainder of paragraph.

4.5.2, line 4: Delete "Agricultural Chemists" and substitute "Analytical".

PAGE 10

Add the following new paragraphs:

"6.3 Definition of terms.

6.3.1 Bruise. A bruise is a damaged portion of a muscle or fatty tissue as evidenced by opaqueness of connective tissue or darkened flesh which exceeds 1/2 inch in any dimension.

Source: https://assist.dla.mil -- Downloaded: 2026-10-16T12:38Z
Check the source to verify that this is the current version before use.

6.3.2 Blood clot. A blood clot is an organized, coagulated opaque mass of blood on the surface of fat or muscle fibers which exceeds 1/4 inch in any dimension.

6.3.3 Bone. Bone is connective tissue whose matrix is hardened by various salts of calcium or potassium. Functional definition - Bone is calcified tissue greater than 1/4 inch in any dimension. Calcified tissue 1/4 inch or less shall not be classified as bone.

6.3.4 Cartilage. Cartilage is elastic, unossified bone tissue.

* 6.3.5 Excellent condition. Meat in excellent condition has a degree of freshness corresponding to that exhibited by bone-in meat which is promptly chilled after slaughter to an internal temperature of 28° to 40°F and maintained within this range with minimal fluctuation and with proper air circulation for a period not exceeding ten days. Meat packaged by heat-shrink vacummized methods may develop a smothered beef odor and/or a darkening or exposed muscle tissue. Fresh bone-in meat may develop surface dehydration and/or a darkening or exposed muscle tissue. Meat displaying any of the undesirable characteristics mentioned above will retain an excellent condition classification only if it can be processed for use without excessive trimming. Meat which has developed a stickiness, sliminess, or discoloration in conjunction with an off-odor shall not be considered in excellent condition. (This definition has been provided by the Department of the Army, Office of the Surgeon General, Washington, DC.)

6.4 Award of contract for the product specified in this document will be limited to plants known to maintain the required sanitation conditions of 3.5 (also see 4.2)."

NOTE: The margins of this amendment are marked with an asterisk to indicate where changes (additions, modifications, corrections, deletions) from the previous amendment were made. This was done as a convenience only and the Government assumes no liability whatsoever for any inaccuracies in these notations. Bidders and contractors are cautioned to evaluate the requirements of this document based on the entire content irrespective of the marginal notations and relationship to the last previous amendment.
