3.7: Delete and substitute

"3.7 Electrode identification -

3.7.1 Marking - At least one legible electrode class designation shall be applied to the electrode covering in such a manner that at least one complete class designation shall appear as closely as practicable to the bare grip-end.

3.7.2 Size and legibility - The designations shall be composed of equal-size block characters, the height of which shall be approximately 50 to 100 percent of the overall electrode diameter (core wire plus coating) but need not exceed a 5/32-inch height. The designations shall read from left to right from the grip-end. The color of the print shall contrast color of the electrode covering. Designations shall be readable under normal lighting conditions.

3.7.3 Stability - Class designations shall remain discernable on electrodes rebaked and on unused portions of partially consumed electrodes or discarded stubs, and shall resist effacement by contact incidental to normal handling, shipping and storage."
