MIL-T-301A
AMENDMENT 2
31 July 1973
SUPERSEDING
AMENDMENT 1
8 June 1966

MILITARY SPECIFICATION

TRIACETIN (GLYCERYL TRIACETATE)

This Amendment forms a part of Military Specification MIL-T-301A, dated 5 December 1961, and is approved for use by all Departments and Agencies of the Department of Defense.

Paragraph 2.1:

STANDARDS

Add: "MIL-STD-1235 - Single and Multilevel Continuous Sampling Procedures and Tables for Inspection by Attributes "

PUBLICATIONS

Delete in its entirety

Paragraph 2.2:

Add "AMERICAN SOCIETY FOR TESTING AND MATERIALS

ASTM-D891 - Specific Gravity of Industrial Aromatic Hydrocarbons and Related Materials "

Paragraph 4.2.2: Delete "Handbook ORD-M608-11" and substitute "MIL-STD-1235".

Paragraph 4.3.2: Delete "Method 510.1" and substitute "ASTM-D891"

Paragraph 4.3.3: Delete in its entirety and substitute:

"4.3.3 Acidity, as Acetic Acid - Add 100 ml of methanol to a clean, 500 ml wide-mouth Erlenmeyer flask. Add 1 ml of bromothymol blue indicator solution and adjust to a blue end point with 0.05N

sodium hydroxide (NaOH). Pipette 100 ml of the sample into the flask and titrate to the same blue end point with 0.05N NaOH. Determine the specific gravity of the sample. WARNING: The accuracy of this method is dependent on the specific gravity being determined at the same temperature as the pipetted sample.

CALCULATION:

$$\text{Acidity, as Acetic Acid, \%} = \frac{\text{ml NaOH} \times N \times 0.06}{\text{sp. gr. of sample}}$$

Where:

N = normality of sodium hydroxide solution

REAGENT:

Methanol - Reagent grade, ACS"
