INTERIM AMENDMENT

TO

FEDERAL SPECIFICATION

SAFE, TOOL-RESISTANT, UNINSULATED, SECURITY

This interim amendment was developed by Federal Supply Service, General Services Administration, Washington, DC 20406, based upon currently available technical information. It is recommended that Federal agencies use it in procurement and forward recommendations for changes to the preparing activity at the address shown above

The General Services Administration has authorized the use of the interim amendment as a valid exception to Federal Specification AA-S-1518A, dated June 1, 1970.

PAGE 1

Paragraph 1.1 - Delete text in its entirety and substitute the following:

"This specification covers tool-resistant safes designed to conform to the standards for security equipment as set forth in the 'National Security Council Directive Governing The Classification, Downgrading, Declassification And Safeguarding Of National Security Information.' The safes provide protection against unauthorized entry for the periods of time specified in 3.9."

PAGE 3

Paragraph 3.3.2 Delete text in its entirety and substitute: "The safe shall have a round, lug-type door which shall have not less than 3 lugs. The clear door opening into the safe interior shall be not less than 12 inches A clearance tolerance up to .0625-inch shall be allowed around the door perimeter in mating of the door and jamb under the condition that the design provides the resistance to entry specified in 3.9. The door shall fit neatly in the frame Operation of the door locking mechanism, including locking bolts, shall be smooth and positive without binding or jamming The door shall have a detent or other suitable feature to hold the locking bolts in a retracted position when the door is open. The door in any open position shall not overbalance the empty safe. The door shall withstand the test in 4.4.8.2."
