FED. SUP CLASS
6630

PART NUMBER	DIAL RANGE	SCALE GRADUATIONS	READER SCALE GRADUATIONS	MEAN RING CIRCUMFERENCE
MS36531-1	0 to 90 dynes/cm	1.0 dyne/cm	0.1 dyne/cm	6 cm

MATERIAL: Cup shall be of borosilicate glass in accordance with ASTM E 438, Type I, Class A.

Ring and stirrup shall be of platinum-iridium.

Carrying case shall be of metal.

DESIGN: Tensiometer shall be of the du Nouy type, which permits regulation of the torque of a fine torsion wire by means of a worm gear. A light weight lever, clamped to the middle of the torsion wire, suspends a stirrup with ring attached. The torsion wire head extends through a circular dial scale, and carries a vernier which permits reading directly to 0.1 dyne/cm. The dial scale range is from 0 to 90 dynes/cm. The instrument shall be standardized for direct readings in dynes/cm, reproducible within porm 0.05 dyne/cm.

PURPOSE: For the determination of upward interfacial and all surface tension measurements by the ring method.

NOTES:
1. Items differing from this Military Standard by minor variations in design or dimensions are considered standard under this document, provided such variations do not affect performance and are not in conflict with the material requirements as specified herein.
2. Referenced documents shall be of the issue in effect on date of invitations for bid.
3. FSCMs: 11273 and 80011.
