"3.3 Lead sheath.- The lead sheath conforming to grade B of QQ-L-171 shall be extruded concentrically over the outer layer of armor. The lead sheath shall be firmly composited with the armor. The outside of the lead sheath shall be knurled along the length of the sheath such that a minimum of 75 percent of the circumference shall be covered with a knurl having a pitch of approximately 30 and a depth of approximately 0.006 inch. The lead sheath shall remain concentric and the diameter shall be 0.410 plus or minus 0.010 inch after knurling. The applied sheath shall be 0.025 inch thick minimum, and shall be concentric with the cable in accordance with MIL-C-915. The outside diameter, after application of covering, shall be 0.480 inch maximum."
