MIL-T-13333B(MU)
AMENDMENT 2
20 January 1969
SUPERSEDING
AMENDMENT 1
4 October 1968

MILITARY SPECIFICATION

TELESCOPE, M49

This amendment forms a part of Military Specification MIL-T-13333B(MU), dated 28 May 1965.

* Paragraph 3.5.1: Delete and substitute

"3.5.1 Resolution.- Resolution on the optical axis shall be 5 seconds or less at one focus setting of an auxiliary telescope of at least 3 power and at least 1/2 inch aperture. Resolution consists of detectable line structure and proper line count."

Add new paragraphs 4.1.2, 4.1.2.1 and 4.1.2.2 as follows:

"4.1.2 First article (initial production) approval.- The requirement for first article approval and the responsibility (Government or contractor) for first article testing shall be as specified in the contract. The sample for first article approval tests shall consist of three (3) telescopes plus three (3) each of all items covered by SQAP. The sample shall be manufactured in the same manner, using the same materials, equipment, processes, and procedures as used in regular production. All parts and materials, including packaging and packing, shall be obtained from the same source of supply as used in regular production.

4.1.2.1 Government testing.- When the Government is responsible for conducting first article approval tests, the contractor, prior to submitting the sample to the Government, shall inspect the sample to insure that it conforms to all the requirements of the contract and submit a record of this inspection with the sample, including certificates of conformance for materials.

4.1.2.2 Contractor testing.- When the contractor is responsible for conducting first article approval tests, the sample shall be inspected by the contractor for all the requirements of the contract. The sample and a record of this inspection, including certificates of conformance for materials, shall be submitted to the Government for approval. The Government reserves the right to witness the contractor's inspection."

* Paragraph 4.5.2.4: Delete and substitute

"4.5.2.4 Resolution.- This test is performed with the test equipment aligned as specified in 4.5.2.3. Set the collimator projector to minimum target distance and sight through the telescope to obtain a sharp image of the vertical and horizontal reticle lines of the collimator. This image

is obtained by adjusting the telescope eyepiece. The observation telescope shall be positioned at the eyepiece assembly of the telescope. The focus of the observation telescope and eyepiece shall be established at one best focus setting for viewing the detectable line structure and proper line count of the resolution target. Resolution of the telescope optical system shall meet the requirements of 3.5.1.

* The outside margins have been marked to indicate where additions to the previous amendment have been made. This has been done as a convenience only and the Governemnt assumes no liability whatsoever for any inaccuracies in this notation. Bidders and contractors are cautioned to evaluate the requirements of this document based on the entire content as written irrespective of the marginal notation and relationship to the last previous amendment.
