ADOPTION NOTICE

IEEE 1278.1A, “IEEE Standard for Distributed Interactive Simulation - Application Protocol - Enumeration and Bit-encoded Values,” was adopted on July 1, 2005, for use by the Department of Defense (DoD). Proposed changes by DoD activities must be submitted to the DoD Adopting Activity: Defense Modeling and Simulation Office (DMSO), Attn: Standards, 1901 N. Beauregard Street, Alexandria, VA 22311-1705. Copies may be purchased from the Institute of Electrical and Electronics Engineers at the IEEE Customer Service Center, 445 Hoes Lane, P.O. Box 1331, Piscataway, NJ 08855-1331, U.S.A. or via the web at http://www.ieee.org.

In accordance with DoD 4120.24-M, the following is included as guidance from DMSO as the Adopting activity: IEEE 1278.1A has been adopted to support existing applications and those situations in which Distributed Interactive Simulation (DIS) protocols are required by interoperability requirements. Its use is deprecated in favor of the IEEE 1516 series for all other simulation environments.

IEEE 1278.1A is a supplement to IEEE 1278.1. It defines the format and semantics of data messages, also known as protocol data units (PDUs), that are exchanged between simulation applications and simulation management. The PDUs provide information concerning simulated entity states, types of entity interactions that take place in a DIS exercise, data for management and control of a DIS exercise, simulated environment states, aggregation of entities, and the transfer of control of entities. IEEE 1278.1A also specifies the communication services to be used with each of the PDUs.
