MIL-B-43866C
AMENDMENT-1
30 December 1987

MILITARY SPECIFICATION

BREAD-SLICING MACHINES, ELECTRIC-OPERATED, MULTIPLE KNIFE

This amendment forms a part of Military Specification MIL-S-43866C, dated 7 March 1986, and is approved for use by all Departments and Agencies of the Department of Defense.

PAGE 2

2.1, under "STANDARDS MILITARY": Add the following:

"MIL-STD-167/1 - Mechanical Vibration of Shipboard Equipment (Type I - Environmental and Type II - Internally Excited).

MIL-STD-1472 - Human Engineering Design Criteria for Military Systems, Equipment and Facilities."

PAGE 7

3.10, line 2, after "3.10.1": Delete "and 3.10.2" and substitute ",3.10.2, and 3.10.3 (see 6.2)."

3.10.2, line 4, after "in": Delete "4.4.2" and substitute "4.4.5".

Add new paragraph:

"3.10.3 Environmental suitability. Type II bread-slicing machines shall be capable of withstanding vibration and inclination. Controls, switches, moving parts and electrical circuits shall operate under shipboard conditions without malfunction, binding, excessive looseness, or damage when tested as specified in 4.4.5".

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

PAGE 8

Add the following new paragraph:

"3.14 Human factors criteria (For Navy use only). Human factors engineering criteria, principles, and practices, as defined in MIL-STD-1472, shall be used in the design of the bread-slicing machines. All maintenance and operational tasks shall permit safe and efficient performance by the 5th percentile female through the 95th percentile male as defined in MIL-STD-1472. All controls and switches needed for operation or maintenance shall be clearly and appropriately labelled to identify function. Particular attention shall be clearly and appropriately labelled to identify function. Particular attention shall be given to the design such that the hands of the operator shall not inadvertantly come in contact with the machine mechanisms and knife blades. Clearance or free area required around an item shall permit an individual with applicable 5th and 95th percentile body dimensions and physical capabilities, (as defined in MIL-STD-1472), to safely operate, maintain, remove, or replace that item. When establishing accessibility requirements, both physical and visual access must be provided, along with access for any tools, test equipment and parts replacement needed. While inspecting for defects and performing tests, the equipment shall adhere to the human factors engineering considerations listed herein."

PAGE 13

4.4.2, line 3, after "3.4,": delete "and 3.10.3".

Add the following new paragraph:

"4.4.5 Shipboard environmental tests. The following tests are required for bread-slicing machines for shipboard use. Failure to operate satisfactorily at the conclusion of the tests or evidence of breakage or excessive looseness of parts shall constitute failure of the test."

(a)
Inclined test. The bread-slicing machine shall be tested under the conditions and requirements listed in 4.4.2 with the machine inclined at an angle of 15 degrees each side of the vertical in each of two vertical planes at right angles to each other. Determination shall be made that the bread-slicing machine operates as intended without spillage of the product and meets the requirements of 3.4 and 3.10.2. Failure to meet these requirements shall constitute failure of the test.

(b)
Vibration test. The bread-slicing machine under normal operating conditions, shall be tested in accordance with MIL-STD-167/1, type I equipment. The slicer shall be secured to the test machine in the same manner that it will be secured on shipboard (see 3.10.1). Failure of the bread-slicing machine to meet the requirement of 3.10.3 during and after testing shall constitute failure of this test."

6.2: Add new sub-letter "h." as follows: "h. When bread-slicing machine is for Naval shipboard use (see 3.10).".

Add the following new paragraph:

"6.2.1 Technical manuals. The requirement for technical manuals should be considered when this document is cited on a contract. If technical manuals are required, a contract exhibit must be prepared to fully describe statement of work criteria and delivery instructions, and cite the applicable technical manual. The technical manuals must be acquired by separate Contract Line Item Number (CLIN) in the contract."
