DEPARTMENT OF THE NAVY
NAVAL SEA SYSTEMS COMMAND

Washington, DC 20362

Ship Space Classification System

DOD-STD-2150(SH)

1. This Military Standard is approved for use by the Naval Sea Systems Command, Department of the Navy, and is available for use by all Departments and Agencies of the Department of Defense.

2. Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Commander, Naval Sea Systems Command, SEA 55Z3, Department of the Navy, Washington, DC 20362 by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document of by letter.

FOREWORD

1. The Ship Space Classification System is a system for structuring ship space data for many uses. This standard defines the structure of the system, instructions for the use of the system, and rules and format for gathering ship space data.

2. Most Naval ships are space critical, and their size and cost are governed by spatial requirements. Consequently, space is a closely monitored resource in the ship design process. To facilitate the use of ship space (area and volume) data, the data must be organized in a structure form, that is, a space classification system.

3. Ship space data organized by a space classification system can be used to:

(a) Develop estimating relationships for space requirements in the feasibility and concept design phases from a historical data base of ship space data.
(b) Compare space allocations among various ships.
(c) Track changes in space allocation during the ship life cycle.

1. SCOPE

1.1 Scope. The purpose of this standard is to establish a uniform system for recording and identifying the space allocated in Navy ships. The Space Classification System shall be used for assignment of a space classification number to a space. The space classification number indicated the function performed by the space.

1.2 Classification. The Ship Space Classification System is a tree structure based upon shipboard functions. This structure includes the implicit structure of the individual functions and subfunctions as reflected in the way compartments are combined and subdivided. The Ship Space Classification System spaces are divided into five basic categories or space classification groups as shown on figure 1. These five groups are briefly defined as follows:

(a) Group 1 Military Mission - Spaces dedicated to the performance of the military mission of the ship.

(b) Group 2 Human Support - Spaced dedicated to the functions performed to support personnel on the ship.

(c) Group 3 Ship Support - Spaces dedicated to functions required to support the ship itself.

(d) Group 4 Ship Machinery - Spaces dedicated to ship propulsion and auxiliary machinery.

(e) Group 5 Unassigned - Spaces for which no function is assigned.

1.2.1 This space classification number for ship compartment or area is a multiple digit number containing at least six digits of the form "X.xxxxx". The value of the digit left of the decimal point is the basic group number from above. The digits to the right of the decimal point are assigned according to the hierarchial functional breakdpwn of each group. The last two digits of a space classification system number identify a standard ship compartment name within the particular lowest level functional breakdown.

2. REFERENCED DOCUMENTS

Not applicable.

3. DEFINITIONS

Not applicable.

4. GENERAL REQUIREMENTS

4.1 General. A space classification system shall fulfill the following requirements:

Source: https://assist.dla.mil -- Downloaded: 202610-26T07:57Z
Check the source to verify that this is the current version before use.

(a) The system shall be broad enough to encompass all of the many types of spaces found on Naval ships.
(b) The system shall be general enough to accommodate future types of spaces.
(c) The system shall be definitive enough that each space has a unique spot in the system.
(d) The structure of the system shall be influenced by the ways ship space data is used.
(e) The system shall be capable of summarizing at several levels of detail.
(f) The system shall reflect the functional grouping of spaces.
(g) The system shall facilitate the automated retrieval of space data.

5. DETAILED REQUIREMENTS

5.1 Space classification groups.

5.1.1 Group 1, Military Mission. Group 1 shall contain all the functions dedicated to the military mission of the ship. As shown on figure 2, this group is divided into nine categories corresponding to types of payload as specified in 5.1.1.1 through 5.1.1.9.

5.1.1.1 Group 1.1, Command, Communications and Surveillance. Group 1.1 shall encompass all compartments dedicated to communications, command and control, countermeasures and sensors.

5.1.1.2 Group 1.2, Weapons. Group 1.2 shall include all compartments dedicated to weapons, weapons control, weapons stowage and weapons handling.

5.1.1.3 Group 1.3, Aviation. Group 1.3 shall include all compartments dedicated to aviation features.

5.1.1.4 Group 1.4, Amphibious. Group 1.4 shall include all compartments dedicated to amphibious assault capabilities.

5.1.1.5 Group 1.5, Cargo. Group 1.5 shall include all compartments dedicated for transfer, control, handling, and stowage of cargo.

5.1.1.6 Group 1.6, Intermediate Maintenance Facilities for Ships. Group 1.6 shall include all compartments dedicated to providing intermediate level maintenance of other ships.

5.1.1.7 Group 1.7, Embarked Commander Facilities. Group 1.7 shall include all compartments dedicated to providing command and control capability for an embarked commander.

5.1.1.8 Group 1.8, Special Mission. Group 1.8 shall be a catch-all group for various military mission functions.

5.1.1.9 Group 1.9, Small Arms. Group 1.9 shall include all compartments dedicated for the use and stowage of small arms and pyrotechnics.

Source: https://assist.dla.mil -- Downloaded: 202610-26T07:57Z
Check the source to verify that this is the currentversion before use.

5.1.2 Group 2, Human Support. Group 2 shall contain all the functions dedicated to supporting the on board accommodations of the ship. As shown on figure 3, this group is divided into seven categories corresponding to basic human support functions as specified in 5.1.2.1 through 5.1.2.7.

5.1.2.1 Group 2.1, Living. Group 2.1 shall include all compartments dedicated to personnel berthing, sanitary, recreation and training functions.

5.1.2.2 Group 2.2, Commissary. Group 2.1 shall include all compartments dedicated to preparing and serving meals for all personnel such as galleys and messrooms.

5.1.2.3 Group 2.3, Medical. Group 2.3 shall include all compartments dedicated to providing medical and dental treatment.

5.1.2.4 Group 2.4, General Services. Group 2.4 shall include all compartments dedicated to providing utility and personal services such as laundry.

5.1.2.5 Group 2.5, Personal Stowage. Group 2.5 shall include all compartments dedicated to the stowage of personal stores such as baggage.

5.1.2.6 Group 2.5, Chemical, Biological and Radiological (CBR) Protection. Group 2.6 shall include all compartments dedicated to the protection of personnel from chemical, biological and radiological warfare.

5.1.2.7 Group 2.7, Lifesaving. Group 2.7 shall include all compartments dedicated to the rescuing shipboard personnel from the ship.

5.1.3 Group 3, Ship Support. Group 3 shall contain the shipboard functions which are provided to support the ship itself. This group, as shown on figure 4 is divided into nine categories, as specified in 5.1.3.1 through 5.1.3.9.

5.1.3.1 Group 3.1, Ship Control. Group 3.1 shall include all compartments dedicated to controlling the movement of the ship.

5.1.3.2 Group 3.2, Damage Control. Group 3.2 shall include all compartments dedicated to the control of shipboard damage.

5.1.3.3 Group 3.3, Administration. Group 3.3 shall include all compartments dedicated to the administration of the shipboard organization.

5.1.3.4 Group 3.5, Deck Systems. Group 3.5 shall include all compartments dedicated to deck systems such as anchoring, transfer-at-sea, and ship's boats.

5.1.3.5 Group 3.6, Maintenance. Group 3.6 shall include all compartments dedicated to the repair of the ship or ship systems.

5.1.3.6 Group 3.7, Stowage. Group 3.7 shall include all compartments used to stow ship consumable stores and operating items.

5.1.3.7 Group 3.8, Access. Group 3.8 shall include all compartments dedicated to providing access through the ship.

Source: https://assist.dla.mil -- Downloaded: 202640-26T07:57Z
Check the source to verify that this is the currentversion before use.

5.1.3.8 Group 3.9, Tanks. Group 3.9 shall include all ship related compartments used to stow liquids and other volumetric spaces.

5.1.4 Group 4, Ship Machinery. Group 4 shall contain all the functions dedicated to ship propulsion and auxiliary machinery. As shown on figure 5, Group 4 is divided into three categories, as specified in 5.1.4.1 through 5.1.4.3.

5.1.4.1 Group 4.1, Propulsion Systems. Group 4.1 shall include all compartments whose primary function is to generate the energy to move the ship and related supporting functions. Group 4.1 is further subdivided by propulsion system type as shown on figure 6. For each propulsion system type, further subdivision is standardized as follows:

4.1x1 Energy generation

4.1x2 Combustion air

4.1x3 Exhaust

4.1x4 Control

where x is the value for the following appropriate propulsion system type:

For conventional steam, x = 1

For nuclear steam, x = 2

For internal combustion, x = 3

For gas turbine, x = 4

For electrical, x = 5

For combined, x = 6

For auxiliary propulsion, x = 7

5.1.4.2 Group 4.2, Propulsor and Transmission Systems. Group 4.2 shall include all compartments whose primary function is to move the ship. This group is subdivided by propulsor type.

5.1.4.3 Group 4.3, Auxiliary Machinery. Group 4.3 shall include all compartments used for auxiliary machinery, and ventilation. This includes air conditioning, electrical, pollution control machinery. This group is subdivided by fuel type.

5.1.5 Group 5, Unassigned. Group 5 shall encompass all the spaces on a ship for which no function has been assigned. Since there are no functions performed, the subdivision of the group is minimal as shown on figure 7.

Check the source to verify that this is the current version before use.

5.1.5.1 Group 5.1. Group 5.1 shall consist of all compartments labelled "Unassigned". These compartments have usable area or volume, but no function has been assigned because either the space was excess to requirements or a space margin policy has provided excess space for future growth.

5.1.5.2 Group 5.2. Group 5.2 shall consist of compartments which are labelled "Reserved", but the function for which they were reserved is unknown. If the function is known, the compartment should be classified for the appropriate function.

APPENDIX B

ALPHABETICAL INDEX OF SHIP SPACE CLASSIFICATION SYSTEM

10. GENERAL

10.1 Scope. This appendix contains an alphabetical list of the space names and ship space classification system subheading titles. Space classification system titles are indicated by a leading asterisk (*). Additional space names are included which have the same space classification number as the standard name included in the numerical list. This list is especially useful for classifying data measured from ships.

APPENDIX C

INSTRUCTIONS FOR PREPARATION OF SPACE DATA

10. GENERAL

10.1 The Naval Sea Systems Command maintains a data base of ship space data. This appendix describes the procedures for gathering ship space data and the format of this data.

10.2 Ship space data is gathered from ship general arrangement drawings, booklets of general drawings and similar drawings. For each individual interior compartment of the ship, a data record is prepared in accordance with the format shown in table I. The following paragraphs define the requirements for each of the fields of the data record.

TABLE I. Ship space data record.

Columns	Description	Type
1-10	Space classification number	Real
13-44	Compartment name	Alphanumeric
45-54	Compartment number	Alphanumeric
55-62	Compartment deck area	Real
63-71	Compartment volume	Real
72-79	Ship hull number	Alphanumeric
80	Drawing identifier	Alphanumeric

10.3 For each compartment, the data is normally developed in the following sequence:

(a) The name of the compartment is taken from the drawing and abbreviated as necessary to fit the 32 column limit of the data record.

(b) The compartment number is entered on the data record. This compartment number is on the compartment and access drawings and the booklet of general drawings. For preliminary and contract design drawings, the compartment number shall be generated in accordance with the requirements of Section 602 of the General Specifications. The compartment number provides the compartment location information.

(c) The space classification number is assigned from this manual based upon the compartment name. If the compartment name is not in this manual, the number shall be assigned based upon the function(s) performed in the compartment and the location of this function in the space classification system structure.

(d) The deck area of the compartment is the total molded deck area enclosed by the bulkheads or exterior surfaces which form the boundaries of the compartment.

Check the source to verify that this is the currentversion before use.

(e) The volume is the total molded volume of the compartment.
(f) The ship hull number (that is, LST1179) shall be the same for all the data records of a given ship.
(g) The drawing identifier indicates the type of drawing used for the data in accordance with the following codes:

Code	Type of drawing.
1	Feasibility design general arrangement drawing.
2	Preliminary design general arrangement drawing.
3	Contract design general arrangement drawing.
4	Compartment and access drawing.
5	Booklet of general drawings.

This identifier shall also be the same for all the data records from a set of drawings.
