MILITARY SPECIFICATION

HOSE ASSEMBLIES, RUBBER, SYNTHETIC, LIQUID PETROLEUM FUELS, DISPENSING, COLLAPSIBLE

This specification is approved for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This specification covers collapsible, synthetic rubber, discharge hose assemblies.

1.2 Classification. The collapsible discharge hose assemblies shall be of the following types, classes, and sizes, as specified (see 6.2):

Type I - Hose assembly, gasoline dispensing pump.

Class 1 - Coupling halves, quick-disconnect, cam-locking type, hose shank; female both ends.
Class 2 - Coupling halves, quick-disconnect, cam-locking type, hose shank; male both ends.
Class 3 - Coupling halves, quick-disconnect, cam-locking type, hose shank; female one end, male other end.

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: USA Belvoir Research, Development, and Engineering Center, ATTN: STRBE-TSE, Fort Belvoir, VA 22060-5606 by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

AMSC N/A FSC 4720
DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

Source: https://assist.dla.mil -- Downloaded: 2026-10-17T18:22Z
Check the source to verify that this is the current version before use.

Type II - Hose assembly, fuel trailers and carts.

Class 1 - Coupling halves, quick-disconnect, cam-locking type, hose shank; female both ends.
Class 2 - Coupling halves, quick-disconnect, cam-locking type, hose shank; male both ends.
Class 3 - Coupling halves, quick-disconnect, cam-locking type, hose shank; female one end, male other end.

Type III - Hose assembly, fuel handling system.

Class 1 - Coupling halves, quick-disconnect, cam-locking type, hose shank; female one end, male other end.

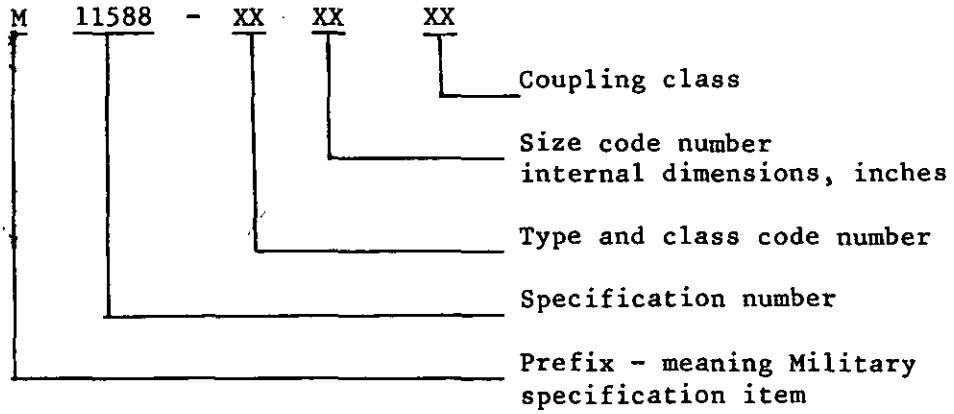

Type IV - Hose assembly, aircraft refueling.

Class 1 - Couplings, replaceable compression type, internal pipe threads both ends.
Class 2 - Couplings, replaceable compression type, external pipe threads both ends.
Class 3 - Couplings, replaceable compression type, internal pipe threads one end, external pipe threads other end.

Sizes

1.00 inch	2.00 inch
1.25 inch	2.50 inch
1.50 inch	3.00 inch
	4.00 inch

1.3 Part number. The military specification part number for the hose assemblies shall be as follows (see 6.4).

2. APPLICABLE DOCUMENTS

2.1 Government documents.

2.1.1 Specifications and standards. The following specifications and standards form a part of this specification to the extent specified herein. Unless otherwise specified, the issues of these documents shall be those listed in the issue of the Department of Defense Index of Specifications and Standards (DoDISS) and supplement thereto, cited in the solicitation.

SPECIFICATIONS

FEDERAL

QQ-S-766 - Steel Plates, Sheets, and Strip - Corrosion-Resisting.

WW-C-440 - Clamps, Hose, (Low-Pressure).

MILITARY

MIL-P-775 - Packaging of Hose, Hose Asembles; Rubber, Plastic, Fabric, or Metal (Including Tubing); and Fittings, Nozzles, and Strainers.

MIL-C-16173 - Corrosion Preventive Compound, Solvent Cutback, Cold-Application.

MIL-C-27487 - Coupling Halves, Quick-Disconnect, Cam-Locking Type.

MIL-C-38404 - Couplings, Hose, Reattachable Screw-on.

STANDARDS

FEDERAL

FED-STD-601 - Rubber: Sampling and Testing.

(Non-Government standards are normally available from the organizations which prepare or which distribute the documents. These documents also may be available in or through libraries or other informational services.)

2.3 Order of precedence. In the event of a conflict between the text of this specification and the references cited herein, the text of this specification shall take precedence. Nothing in this specification, however, shall supersede applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 Description. The hose assemblies shall consist of collapsible, reinforced synthetic rubber hose with attached couplings/coupling halves, and fittings.

3.2 First article. Unless otherwise specified (see 6.2), a sample shall be subjected to first article inspection (see 4.3 and 6.3). Any changes or

Source: https://assist.dla.mil -- Downloaded: 2026-10-17T18:22Z
Check the source to verify that this is the current version before use.

deviations of hose and hose assemblies from the approved first article during production will be subject to the approval of the contracting officer. Approval of the first article will not relieve the contractor of his obligation to furnish hose and hose assemblies conforming to this specification.

3.3 Material. Material shall be as specified herein. Materials not specified shall be selected by the contractor and shall be subject to all provisions of this specification.

3.3.1 Material deterioration prevention and control. The hose and hose assemblies shall be fabricated from compatible materials, inherently corrosion resistant or treated to provide protection against the various forms of corrosion and deterioration that may be encountered in any of the applicable operation and storage environment to which the hose and hose assembly may be exposed.

3.3.2 Dissimilar metals. Dissimilar metals shall not be used in intimate contact with each other unless protected against galvanic corrosion. Dissimilar metals and methods of protection are defined and detailed in MIL-STD-889.

3.3.3 Identification of materials and finishes. The contractor shall identify the specific material, material finish or treatment for use with component and subcomponent, and shall make information available upon request to the contracting officer or designated representative.

3.3.4 Recovered materials. For the purpose of this requirement, recovered materials are those materials which have been collected from solid waste and reprocessed to become a source of raw materials, as distinguished from virgin raw materials. The components, pieces and parts incorporated in the hose and hose assembly may be newly fabricated from recovered materials to the maximum extent practicable, provided the hose and hose assembly produced meets all other requirements of this specification. Used, rebuilt or remanufactured components, pieces and parts shall not be incorporated in the hose and hose assembly.

3.4 Length of hose. The length of the hose shall be as specified (see 6.2) and shall be the actual hose length exclusive of the couplings. A tolerance in length of 2 percent will be permitted.

3.5 Design and construction.

3.5.1 Hose. The hose shall be constructed of a compounded inner tube, a synthetic fiber reinforcement, and a compounded cover for use with liquid petroleum fuels. Hose color shall be as specified (see 6.2).

3.5.2 Tube. The tube shall be fabricated from a synthetic compound utilizing a copolymer product of butadiene and acrylonitrile or other synthetic oil resistant compound. The tube shall be smooth, free from pits, and shall be of uniform thickness.

Source: https://assist.dla.mil -- Downloaded: 2026-10-17T18:22Z
Check the source to verify that this is the current version before use.

3.5.3 Cover. The cover shall be fabricated from a synthetic compound utilizing polymerized chloroprene or other synthetic rubber compounded for fuel, oil, abrasion, hydrolitic stability and ozone resistance that complies with all the requirements specified herein. The cover shall be uniform in thickness.

3.5.4 Diameters and weights. The hose shall be furnished in the diameters and weights shown in table II.

TABLE II. Diameters and weights.

Type	Inside diameter inches[1/]	Outside diameter inches	Pounds/foot (max)
I and II	1.000	1.500 ±0.063	0.625
	1.250	1.750 ±0.063	0.875
	1.500	2.000 ±0.063	1.000
	2.000	2.500 ±0.125/-0.063	1.125
	2.500	3.000 ±0.125/-0.063	1.438
	3.000	3.500 ±0.125/-0.063	1.750
	4.000	4.500 ±0.125/-0.063	2.500
III and IV	1.000	1.563 ±0.063	0.750
	1.250	1.813 ±0.063	1.000
	1.500	2.063 ±0.063	1.125
	2.000	2.563 ±0.063	1.250
	2.500	3.063 ±0.125/-0.063	1.563
	3.000	3.625 ±0.125/-0.063	1.875
	4.000	4.750 ±0.125/-0.063	2.625

1/ ±0.0313 inches

3.5.5 Static wire. The wires shall be embedded within or between the plies. The wires shall not break when the hose is coiled, or subjected to internal or external pressure. Each finished hose section shall display a continuous electrical circuit between the end couplings when tested as specified in 4.5.2.8.

3.6 Couplings. The couplings described herein are illustrated in figures 1 and 2.

3.6.1 Coupling halves (cam-locking type). Coupling halves for types I, II, and III hose shall be in accordance with MIL-C-27487, type II or IV, class 1 or 2, as applicable (see 1.2).

3.6.2 Coupling, reattachable, screw-on. Couplings for type IV hose shall be in accordance with MIL-C-38404, class 1, type I or II, as applicable (see 1.2).

Source: https://assist.dla.mil -- Downloaded: 2026-10-17T18:22Z
Check the source to verify that this is the current version before use.

3.6.3 Coupling caps. Couplings used on type IV hose assemblies shall be provided with protective, closed-end, reusable, threaded metal or plastic caps of suitable thickness and composition that will not be chemically affected by grade 1 corrosion-preventive compound conforming to MIL-C-16173. Coupling halves conforming to MIL-C-27487 shall be provided with the type IX dust cap or the type X dust plug conforming to MIL-C-27487. The caps and plugs shall be made captive to the couplings by means of a chain or similar attachment.

3.7 Hose clamps. Each cam-locking-type coupling half shall be banded to the hose with 2 hose clamps. The clamps shall conform to WW-C-440, type H. When installed and locked, the clamps shall have no protruding ends. The 1-inch, 1.25-inch, and 1.5-inch size couplings shall be banded to the hose with band clamps 0.50 inch in width, the 2.00-inch and 2.50-inch sizes with band clamps 0.625 or 0.75 inch in width, and the 3.00-inch and 4.00-inch sizes with band clamps 0.75-inch in width. Hose clamps shall be non-reflective.

3.8 Reinforcement.

3.8.1 Sizes 1-inch through 2.50-inch hoses. The reinforcement material for the sizes 1-inch through 2.50-inch inside diameter (I.D.) hoses shall be one or more plies of braided, spiralled, or woven synthetic fiber cord which shall be evenly and firmly fabricated and thoroughly impregnated with synthetic rubber compound which shall cause the plies to adhere firmly to each other and to the tube and cover. The reinforcement material shall be free from defects, dirt, knots, lumps, and irregularities of twist so that the completed hose shall comply with all the applicable requirements of this specification.

3.8.2 Sizes 3-inch and 4-inch hoses. The reinforcement material for the sizes 3-inch and 4-inch I.D. hoses shall be two or more plies of braided, spiralled, or woven synthetic fiber cord or a fabric of two or more even-number layers of synthetic fiber cord embedded in synthetic rubber compound, wound or plied in contradirection, and arranged so that there is a rubber bond through the space between each cord which will provide a continuous rubber bond from the inner tube through the reinforcement to the outer cover. The reinforcement shall be evenly and firmly fabricated, and shall be free from defects, dirt, knots, lumps, and irregularities of twist so that the completed hose shall comply with all of the applicable requirements of this specification.

3.9 Physical and chemical requirements.

3.9.1 Hydrostatic pressure. When tested as specified in 4.5.2.1, the hose with couplings attached shall not leak nor show any imperfections in either the hose or couplings.

3.9.1.1 Length change and twist. When tested as specified in 4.5.2.2, the length of hose shall not change more than ±3 percent and shall not twist either clockwise or counterclockwise more than one-half turn (180 degrees) in 25 feet.

3.9.1.2 Minimum burst. When tested as specified in 4.5.2.3, each type of hose shall have a minimum burst pressure as specified in table III.

Source: https://assist.dla.mil -- Downloaded: 2026-10-17T18:22Z
Check the source to verify that this is the current version before use.

TABLE III. Burst and working pressures.

Hose assembly type	Size I.D. (inches)	Psig (min) burst pressure	Psig working pressure
I	All	200	50
II	All	350	88
III	1 thru 2.50	400	100
III	3	500	125
III	4	600	150
IV	1 thru 2.50	400	80
IV	3	500	100
IV	4	600	120

3.9.2 Tensile strength. The tensile strength of the tube shall be not less than 1250 pounds per square inch (psi) and the tensile strength of the cover shall be not less than 1000 psi when tested as specified in 4.5.2.4.1. The tensile strength of the tube and cover after immersion, when tested as specified in 4.5.2.4.3, shall be not less than 40 percent or less than 600 psi (whichever is greater) of the tensile strength obtained before immersion.

3.9.3 Ultimate elongation. When tested as specified in 4.5.2.4.1, the ultimate elongation of the tube and cover shall be not less than 200 percent or, when tested as specified in 4.5.2.4.3, shall be not less than 40 percent of the original elongation obtained before immersion.

3.9.4 Adhesion.

3.9.4.1 Original. The original adhesion between tube and plies, between the plies, and between the cover and the plies shall be not less than 10 pounds when tested as specified in 4.5.2.4.2.

3.9.4.2 After fill test. The adhesion between the tube and plies, between the plies, and between the cover and the plies shall be not less than 6 pounds when tested as specified in 4.5.2.4.4.

3.9.5 Volume increase. When tested as specified in 4.5.2.5, the volume increase of the tube specimen after immersion in test fluid shall not exceed 40 percent, and the volume increase of the cover speciman shall not exceed 70 percent.

3.9.6 Low temperature flexibility. When tested as specified in 4.5.2.6, the relative torsional modulus for the inner tube and the outer cover shall be not greater than 5 at -32° C (-25° F).

3.9.7 Gum content.

3.9.7.1 Existent unwashed gum content. When tested as specified in 4.5.2.7.2, the remainder shall be not more than 20 miligrams per 100 milliliters of test fuel.

Source: https://assist.dla.mil -- Downloaded: 2026-10-17T18:22Z
Check the source to verify that this is the current version before use.

3.9.7.2 Existent heptane washed gum content. The heptane washed existent gum content shall be not more than 5 mg/100 ml when tested in accordance with 4.5.2.7.2.

3.10 Identification marking. Each length of hose shall be branded with the contractor's name or trademark, the quarter and year of manufacture, the type, the working pressure, and the words "Hose, Liquid Petroleum Fuels, Dispensing, Collapsible". Each length of hose shall be branded with specification part number, when required (see 6.2). The hoses shall be branded with the manufacturer's standard working pressures for the specific type and size hose supplied, but shall not be rated less than the working pressures indicated in table III. In addition to the brand, the type II hose assembly shall be marked with a longitudinal yellow stripe not less than 0.125-inch wide and extending the full length of the hose. The stripe shall be fabricated from the same basic material as the cover or material that is compatible with the cover and has a service life equal to the cover. The letters shall be molded either recessed or in relief and shall be not less than 0.250-inch high. Hoses shall be branded at 10-foot intervals or by continuous- impression branding, provided that the pattern will be repeated every 5 feet or less. Letters shall be 0.500 inch high and be of a color contrasting with hose background color.

3.11 Workmanship. The hose assemblies shall conform to the quality requirements specified herein with no cuts, nicks, bruises, blisters, sharp edges, or lumps, and shall be clean and smooth.

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection requirements as specified herein. Except as otherwise specified in the contract or purchase order, the contractor may use his own or any other facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the Government. The Government reserves the right to perform any of the inspections set forth in the specification where such inspections are deemed necessary to assure supplies and services conform to prescribed requirements.

4.1.1 Responsibility for compliance. All items must meet all requirements of sections 3 and 5. The inspection set forth in this specification shall become a part of the contractor's overall inspection system or quality program. The absence of any inspection requirements in the specification shall not relieve the contractor of the responsibility of assuring that all products or supplies submitted to the Government for acceptance comply with all requirements of the contract. Sampling in quality conformance does not authorize submission of known defective material, either indicated or actual, nor does it commit the Government to acceptance of defective material.

4.2 Classification of inspections. The inspection requirements specified herein are classified as follows:

a. First article hose assembly inspection (see 4.3).
b. Quality conformance inspection (see 4.4).
c. Inspection of packaging (see 4.6).

Source: https://assist.dla.mil -- Downloaded: 2026-10-17T18:22Z
Check the source to verify that this is the current version before use.

4.3 First article hose assembly inspection.

4.3.1 Examination. The first article hose assembly shall be examined as specified in 4.5.1. Presence of one or more defects shall be cause for rejection.

4.3.2 Tests. The first article hose assembly shall be tested as specified in 4.5.2.1 through 4.5.2.8, inclusive. Failure of any test shall be cause for rejection of the hose assembly.

4.4 Quality conformance inspection.

4.4.1 Lot. Each lot shall consist of all units of hose assemblies of the same type, class, and size manufactured under the same conditions and at the same time, and offered to the Government at one time.

4.4.2 Sampling. Sampling of hose and hose assemblies for examination and tests shall be in accordance with MIL-STD-105, inspection level S-2.

4.4.3 Examination. Samples selected in accordance with 4.4.2 shall be examined as specified in 4.5.1. AQL shall be 1.0 percent defective.

4.4.4 Tests.

4.4.4.1 Individual. Each hose assembly shall be tested as specified in 4.5.2.1. Failure of the test shall be cause for rejection.

4.4.4.2 Samples. Samples selected in accordance with 4.4.2 shall be tested as specified in 4.5.2.1 through 4.5.2.6, inclusive and 4.5.2.8. AQL shall be 1.0 percent defective.

4.5 Inspection procedure.

4.5.1 Examination. The hose assembly shall be examined as specified herein for the following major defects:

101. Materials not as specified.
102. Materials are not resistant to corrosion or deterioration or treated to be made resistant to corrosion or deterioration in the applicable storage and operating environment.
103. Dissimilar metals as specified in MIL-STD-889 are not effectively insulated from each other as specified.
104. Contractor does not have documentation available for identification of material, material finishes or treatments.
105. Used, rebuilt, or remanufactured components, pieces or parts incorporated in the hose and hose assembly.
106. Diameters and weights not as specified.
107. Length of hose not as specified.
108. Design and construction not as specified.
109. Identification marking missing, illegible, or not as specified.
110. Workmanship not as specified.
111. Dust caps and plugs not made captive.

4.5.2 Tests.

Source: https://assist.dla.mil -- Downloaded: 2026-10-17T18:22Z
Check the source to verify that this is the current version before use.

4.5.2.1 Hydrostatic. Each length of hose, with fittings such as couplings and adapters attached, shall be subjected to a hydrostatic pressure test as specified in table IV. Nonconformance to 3.9.1 shall constitute failure of the test.

TABLE IV. Hydrostatic test.

Type hose assembly	Inch size	Psig hydrostatic test pressure 1/
I	All	100
II	All	175
III	1 thru 2.50	200
III	3	250
III	4	250
IV	1 thru 2.50	200
IV	3	250
IV	4	250

1/ The pressure on each hose shall be maintained for 30 seconds.

4.5.2.2 Length change and twist. A measurement of the original length of each length of hose shall be made, with the hose laid out in a straight horizontal position, after a pressure of 10 psig is applied and maintained. With a crayon or soft pencil, make a mark on the top surface of the hose cover at each end adjacent to the coupling. These marks are used as a means of measuring the amount of twist during the test. The pressure shall then be increased to 100 psig and held for 30 seconds. With the pressure still maintained, the final length measurement and final twist measurement shall be taken. The percent change in length shall be calculated as plus for increase and minus for decrease in length. Nonconformance to 3.9.1.1 shall constitute failure of the test.

4.5.2.3 Minimum burst. A sample of not less than 3 feet nor more than 6 feet shall be cut from the one length selected from each 100 lengths for burst and physical tests. The hose shall be subjected to a hydrostatic test pressure in accordance with table III listed in 3.9.1.2. The pressure shall be supplied at a uniform rate sufficient to develop the test pressure in 10 seconds, ± 2 seconds. Nonconformance to 3.9.1.2 shall constitute failure of the test. The remaining section of hose from which the test sample has been taken shall be accepted as a full length, provided the sample meets all the requirements of the specification.

4.5.2.4 Tensile strength, elongation, and adhesion. Tests for tensile strength, elongation, and adhesion shall be made in accordance with applicable ASTM standards.

Source: https://assist.dla.mil -- Downloaded: 2026-10-17T18:22Z
Check the source to verify that this is the current version before use.

4.5.2.4.1 Tensile and elongation specimens. Tensile and elongation specimens shall be tested in accordance with ASTM D 412. Die "C" shall be used for cutting test specimens. The tube specimens shall be buffed to not less than 0.050-inch thickness. Nonconformance to 3.9.2 and 3.9.3 shall constitute failure of this test.

4.5.2.4.2 Original adhesion test. A dry specimen of hose material shall be tested in accordance with ASTM D 413. Nonconformance to 3.9.4.1 shall constitute failure of this test.

4.5.2.4.3 Tensile strength and ultimate elongation after immersion. Tensile strength and ultimate elongation after immersion shall be determined in accordance with ASTM D 471. The immersion medium shall be test fluid conforming to ASTM D 471 Reference fuel B. The temperature of immersion shall be 158 °F (70 °C) ±3.6 °F (2 °C). The immersion time shall be 14 days. Nonconformance to 3.9.2 and 3.9.3 shall constitute failure of this test.

4.5.2.4.4 Adhesion after filling. A 12-inch length of the hose shall be suitably stoppered and filled with aromatic hydrocarbon fluid conforming to ASTM D 471 Reference fuel B, and maintained at a temperature of +23 °C, ±3 °C (+75 °F, ±5 °F) for 48 hours. Ring specimens, as described in ASTM D 413, shall be cut from the 12-inch piece of hose and tested in accordance with ASTM D 413 (machine method) within 15 minutes after the removal of the test fluid. Nonconformance to 3.9.4.2 shall constitute failure of this test.

4.5.2.5 Volume increase. Volume increase test shall be determined in accordance with ASTM D 471. The immersion medium shall be test fluid conforming to ASTM D 471 Reference fuel B. The immersion shall be at +23 °C, ±3 °C (+73.4 °F, ±5.4 °F) for 48 hours. Nonconformance to 3.9.5 shall constitute failure of this test.

4.5.2.6 Low temperature flexibility. The test for low temperature flexibility shall be made in accordance with FED-STD-601, method 5611. The low temperature test shall be determined after the samples have been conditioned 7 days at −32 °C, ±2 °C (−25.6 °F ±3.6 °F). Nonconformance with 3.9.6 shall constitute failure of this test.

4.5.2.7 Gum content.

4.5.2.7.1 Existent unwashed gum. A test sample of hose, not less than 14 inches long, shall be selected and the bottom plugged with a clean corrosion-resisting steel cylinder 2 inches long secured in place with a clamp. The sample shall be filled to within 2 inches of the top with test fluid conforming to ASTM D 471 Reference fuel B. The top end of the hose shall be plugged in a manner similar to the bottom. The sample shall then be stored in a vertical position for 7 days at an ambient temperature of +38 °C, ±1 °C (100 °F, ±2 °F). At the end of each 24 hours, the fuel in the sample shall be agitated for 5 minutes by moving the hose back and forth from a vertical to a horizontal position at a rate of 2 cycles per minute. At the end of the 7-day storage period, the fuel shall again be agitated in the sample for 5 minutes and immediately removed from the hose. The removed fuel shall be tested for

Source: https://assist.dla.mil -- Downloaded: 2026-10-17T18:22Z
Check the source to verify that this is the current version before use.

existent gum in accordance with the air-jet solvent wash method of ASTM D 381. A blank shall be run on the test fluid at the same time and by the same method. The existent gum of the blank fluid shall be subtracted from the existent gum obtained from the test fluid removed from the hose. Nonconformance to 3.9.7.1 shall constitute failure of the test.

4.5.2.7.2 Existent heptane washed gum content. Samples from 4.5.2.7.1 may be used to determine the heptane washed existent gum in accordance with section 10 of ASTM D 381. The average of three determinations shall be reported. Nonconformance to 3.9.7.2 shall constitute failure of this test.

4.5.2.8 Continuity. Electrical continuity shall be tested for by means of an ohmmeter. Three sections of finished hose shall be coupled together and checked for electrical continuity for first article tests. One section of finished hose shall be used for sample test. Nonconformance to 3.5.5 shall constitute failure of this test. Test shall be conducted with hose length laid out flat a non-conducting surface.

4.6 Inspection of packaging. The preservation, packing, and marking shall be examined in accordance with the inspection procedures of MIL-P-775 for levels A and B, and for compliance with ASTM D 3951 for commercial packaging.

5. PACKAGING

5.1 Preservation. Preservation shall be level A or commercial, as specified (see 6.2).

5.1.1 Level A. Hose assemblies shall be preserved in accordance with the level A preservation and packing requirements of MIL-P-775.

5.1.2 Commercial. Hose assemblies shall be preserved in accordance with ASTM D 3951.

5.2 Packing. Packing shall be level A, level B, or commercial, as specified (see 6.2).

5.2.1 Level A. Hose assemblies shall be packed in accordance with the level A packing requirements of MIL-P-775.

5.2.2 Level B. Hose assemblies shall be packed in accordance with the level B packing requirements of MIL-P-775.

5.2.3 Commercial. Hose assemblies shall be packed in containers or on pallets in accordance with ASTM D 3951.

5.3 Marking.

5.3.1 Military packaging. Marking shall be in accordance with MIL-STD-129.

5.3.2 Commercial packing. Marking shall be in accordance with ASTM D 3951. In addition, all shipping containers shall show the weight and cube.

6. NOTES

6.1 Intended use. The hose assemblies covered by this specification are intended for use in connection with dispensing liquid petroleum fuels as follows:

Type I - Primarily for use with gasoline dispensing pumps.
Type II - Primarily for use in fuel trailers and carts.
Type III - Primarily for use with Marine Corps amphibious assault fuel handling systems capable of handling light petroleum fuels.
Type IV - Primarily for use with aircraft refuelers.

6.2 Ordering data. Procurement documents should specify the following:

a. Title, number, and date of this specification.
b. Type, class, and size of hose assembly required (see 1.2).
c. Definitive military part number required (see 1.3).
d. Time frame required for submission of first article model and number of hose assemblies required (see 3.2).
e. Length of hose required (see 3.4).
f. Color of outer cover of hose (see 3.5.1).
g. Degree of preservation and degree of packing required (see 5.1 and 5.2).

6.3 First article. When a first article inspection is required, the items should be an initial production hose assembly. The first article should consist of one or more units. The contracting officer should include specific instructions in acquisition documents regarding arrangements for examinations, tests, and approval of the first article test results and disposition of the first article.

6.4 Subject term (Key word) listing.

Hose
Hose, aircraft refueling
Hose, collapsible
Hose, discharge
Hose, elastomeric
Hose, fuel
Hose, gasoline
Hose, rubber

6.5 Changes from previous issue. Asterisks (or vertical lines) are not used in this revision to identify changes with respect to the previous issue due to the extensiveness of the changes.

INSTRUCTIONS: In a continuing effort to make our standardization documents better, the DoD provides this form for use in submitting comments and suggestions for improvements. All users of military standardization documents are invited to provide suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge *(DO NOT STAPLE)*, and mailed. In block 5, be as specific as possible about particular problem areas such as wording which required interpretation, was too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate the problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

NOTE: This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document*(s)* or to amend contractual requirements.
