COMMERCIAL ITEM DESCRIPTION

FORMULAS, INFANT

The U.S. Department of Agriculture has authorized the use of this Commercial Item Description.

This Commercial Item Description (CID) covers infant formula, formulated for infants 0-12 months of age (a full year formula), packed in commercially acceptable containers, suitable for use by the Federal Government.

Salient characteristics.

Types, styles, and classes.

The infant formula shall be of the following types, styles, and classes as specified in the solicitation, contract, or purchase order:

Type I - Low iron infant formula

Type I infant formula is deficient (less than 1 mg of iron (Fe) per 100 Kilocalories) in the required amount of iron, and supplemental iron is required if fed to an infant as the sole source of food.

Style A - Milk-based/Whey-based
Style B - Soy-based

Beneficial comments, recommendations, additions, deletions, clarifications, etc., and any data which may improve this document should be sent to: Head, Food Quality Assurance Staff, Fruit and Vegetable Division, Agricultural Marketing Service, U.S. Department of Agriculture, Room 2506, South Building, P.O. Box 96456, Washington, DC 20090-6456.

FSC 8940

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

Check the source to verify that this is the current version before use.

Class 1 - Ready to feed
Class 2 - Liquid, concentrated
Class 3 - Powder

Type II - Infant formula with iron

Type II infant formula with iron shall supply not less than 1.48 mg of iron (Fe) per 100 Kilocalories [10.0 mg iron (Fe) per liter] at standard dilution. The source of the iron shall be ferrous sulfate.

Style A - Milk-based/Whey-based
Style B - Soy-based

Class 1 - Ready to feed
Class 2 - *Liquid, concentrated*
Class 3 - Powder

Finished product.

At standard dilution, as applicable, **ALL CLASSES** of infant formulas shall have the normal characteristic taste and odor, free from rancidity and other undesirable tastes and odors. The infant formula shall be of medium viscosity, be free flowing, and have a uniform consistency and appearance. Infant formula shall possess a white to light cream color. The infant formula shall be free from gelation, which includes such factors as surface ripple, unevenness of flow, and lumpiness. The infant formula shall be free from creaming (the separation of fat), protein agglomeration (the cohesion of microscopic protein particles of sufficient size to be visible), and extraneous material. Milk-based/whey-based infant formula shall be free from coarse milk and whey-based solids precipitate or sedimentation.

At standard dilution, all classes of infant formulas shall supply 20 Kcal per fluid ounce.

Cans of infant formula shall be free of excessive dents and distortions and free from rust or other evidence of improper storage. Unless otherwise specified, the age of the infant formula at the time of shipment from the manufacturing plant shall not exceed 30 days after packaging. Cans and can coatings must meet Federal Food and Drug Administration requirements for safe contact with packaged infant formula. All classes of infant formulas shall have a minimum of one year shelf life after date of packaging.

Class 1: Ready to feed infant formula is ready to use from the primary container. The infant formula shall be a commercially sterile product. The infant formula shall supply the labeled nutritional requirements.

Check the source to verify that this is the current version before use.

Class 2: Standard dilution for concentrated liquid infant formula is equal parts of concentrated liquid infant formula and water. The infant formula shall be a commercially sterile product. When prepared in accordance with label instructions, the infant formula shall supply the labeled nutritional requirements.

Class 3: Powder infant formula shall be of suitable particle size and solubility such that it will readily disperse in warm water. Standard dilution of powder infant formula is one level scoop of powder for each two fluid ounces (59.147 mL) of water. When tested, a 25 gram sample shall contain not more than 15.0 mg scorched particles when compared to the American Dairy Products Institute Scorched Particle Standards for Dry Milks. When prepared in accordance with label instructions, the infant formula shall supply the labeled nutritional requirements.

The microbiological determinations of powder infant formula shall be in accordance with the following referenced methods.

The Official Methods of Analysis of the AOAC and/or the Food and Drug Administration, Bacteriological Analytical Manual Methods of Analysis (BAM) approved method specific for infant formula currently in effect on the date of solicitation. Upon microbiological analysis, the powder infant formula shall not exceed the following values:

Salmonella - Negative.
Listeria monocytogenes - Negative

The Food and Drug Administration, Bacteriological Analytical Manual Methods of Analysis (BAM) approved method specific for infant formula currently in effect on the date of solicitation. Upon microbiological analysis, the powder infant formula shall not exceed the following values:

Coliforms - Not more than 10 per gram
Fecal coliforms - Not more than 3 per gram
Escherichia coli - Not more than 3 per gram
Coagulase Positive Staphylococcus aureus - Negative
Bacillus cereus - Not more than 50 per gram
Aerobic Plate Count - Not more than 500 per gram

Contractor's certification.

By submitting an offer, the contractor certifies that the infant formula offered meets the specified salient characteristics of this CID; conforms to the producer's own specifications and standards, including infant formula characteristics, manufacturing procedures, quality control procedures, and storage and handling practices; has a national or regional distribution

from storage facilities located within the United States, its territories, or possessions; and is sold on the United States commercial market. The Government reserves the right to determine proof of such conformance prior to the first delivery from point of origin and any time thereafter, up to and including delivery at final destination, as may be necessary to determine conformance with the provisions of the contract.

Regulatory requirements.

The delivered infant formula shall comply with all applicable Federal and State mandatory requirements and regulations relating to the preparation, packaging, labeling, storage, distribution, and sales of the infant formula within the commercial marketplace.

The infant formula shall comply with all applicable regulations relevant to infant formula (21 CFR Parts 1 to 199) pursuant to the provisions of the Federal Food, Drug, and Cosmetic Act.

Preservation, packaging, packing, labeling, and marking.

The infant formula shall be preserved, packaged, packed, labeled, and case marked in accordance with good commercial practice. Primary containers shall be packed in corrugated fiberboard shipping containers or corrugated fiberboard trays with plastic shrink wrap that will provide infant formula protection against loss and damage during multiple shipment, handling, and storage. Commercial labeling and packaging, as may be augmented by the solicitation, contract, or purchase order shall be acceptable. Shipping containers shall comply with the National Motor Freight Classification or Uniform Freight Classification, as applicable. Each powder infant formula container shall include a measuring scoop and be equipped with a plastic lid for use after opening.

Notes.

Purchasers shall specify:

- Type, style, and class.
- Labeling requirements, if different from good commercial practice.
- Container and container pack size:

A. Ready to feed

8 fluid ounces (236.59 mL) per can, packed 24 cans per case.
8 fluid ounces (236.59 mL) per can, packed 12 cans per case.
32 fluid ounces (946.35 mL) per can, packed 6 cans per case.

B. Liquid, concentrated

13 fluid ounces (384.46 mL) per can, packed 24 cans per case.
13 fluid ounces (384.46 mL) per can, packed 12 cans per case.
13 fluid ounces (384.46 mL) per can, packed 6 cans per case.

C. Powder

1.06 ounces (30.05 g) foil pouch, packed 48 pouches per case.
12 ounces (340.19 g) per can, packed 6 cans per case.
14 ounces (396.89 g) per can, packed 6 cans per case.
16 ounces (453.59 g) per can, packed 6 cans per case.
32 ounces (907.18 g) per can, packed 6 cans per case.
40 ounces (1.134 kg) per can, packed 4 cans per case.
