DATA ITEM DESCRIPTION

Form Approved
OMB No 0704-0188

Public reporting burden for this collection of information is estimated to average 110 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Da Highway, Suite 1204, Arlington, VA 22202-4302, and to the Office of Management and Budget, Paperwork Reduction Project (0704-0188), Washington, DC 20503

1 TITLE

PLANNED MAINTENANCE SYSTEM (PMS) PROCEDURE EVALUATION SHEET (PES)

2 IDENTIFICATION NUMBER

DI-MNTY-80987

3 DESCRIPTION / PURPOSE

3.1 The Planned Maintenance System (PMS) Procedure Evaluation Sheet (PES) determines the most practical method of accomplishing the maintenance task.

4 APPROVAL DATE (YYMMDD)

900517

5 OFFICE OF PRIMARY RESPONSIBILITY (OPR)

N/CEL-TD

6a DTIC APPLICABLE

6b GIDEP APPLICABLE

7 APPLICATION / INTERRELATIONSHIP

7.1 This Data Item Description (DID) contains the format and content preparation instructions for the PMS Procedure Evaluation Sheet resulting from the work task described by 3.10 of MIL-P-24534 (Navy).

7.2 This DID is related to DI-MNTY-80994, Planned Maintenance System Functional Block Diagram; DI-MNTY-80979, Planned Maintenance System

N4941

10 PREPARATION INSTRUCTIONS

10.1 Format. The PMS Procedure Evaluation Sheet (PES) shall be documented using contractor format:

10.1.1 The procedure evaluation sheet may be handwritten or printed using a black pen.

10.2 Content. The PES shall contain the following:

10.2.1 Ship system, subsystem or equipment. The nomenclature of the ship system, subsystem, or equipment.

10.2.2 Activity/contract number. Enter the activity or contract number.

10.2.3 Local control number. Enter the local control number.

10.2.4 Date and page. Enter the date and page number.

10.2.5 MRC code. Enter the Maintenance Requirement Card (MRC) code.

(Continued on Page 2)

11 DISTRIBUTION STATEMENT

Distribution Statement A: Approved for public release; distribution is unlimited

7. Application/Interrelationship (Continued)

Master System and Subsystem Index; DI-MNTY-80980, Planned Maintenance System Failure Modes and Effects Analysis; DI-MNTY-80981, Planned Maintenance System Functional Failure Analysis; DI-MNTY-80982, Planned Maintenance System Functionally Significant Items Index; DI-MNTY-80983, Planned Maintenance System Additional Functionally Significant Item Index Selection Report; DI-MNTY-80984, Planned Maintenance System Logic Tree Analysis With Supporting Rationale and Justification; DI-MNTY-80985, Planned Maintenance System Servicing and Lubrication Analysis; DI-MNTY-80986, Planned Maintenance System Requirement Index; DI-MNTY-80988, Planned Maintenance System Task Definition; DI-MNTY-80989, Planned Maintenance System Inactive Equipment Maintenance Requirement Analysis; DI-MNTY-80990, Planned Maintenance System Reliability Centered Maintenance Documentation Control Sheet; DI-MNTY-80991, Planned Maintenance System Maintenance Requirement Card; DI-MNTY-80992, Planned Maintenance System Maintenance Index Page; DI-MNTY-80993, Planned Maintenance System Quality Assurance Check Sheet.

10. Preparation Instructions (Continued)

10.2.6 Developer. Enter the developer of the PES.

10.2.7 Maintenance requirement description. A description of the maintenance requirement (MR). Note: When filling in the following information, the entries in all the columns must be related. For example, the entries in the SYMBOL, TIME, EXAMINATION, etc., columns must be related to the entry in the first line in the PRESENT METHOD column.

10.2.8 Record. Maintenance requirements shall be method studied in periodicity sequence as established by maintenance analysis. More frequent periodicities shall be method studied first; for example, weekly requirements before monthly requirements.

10.2.8.1 Present method. A step-by-step method required to accomplish the MR stated in the PES heading shall be entered in the PRESENT METHOD column. When available, previously developed methods shall be used. If there are no previously developed methods, a proposed method shall be entered.

10.2.8.2 Symbol. Each step in the present method column shall be carefully examined to determine primary and secondary actions. Primary actions are limited to the step or steps which actually accomplish the maintenance action described in the MR. For example, for the MR "Lubricate Pedestal Bearing," only the steps actually pertaining to the lubrication of the bearing are primary actions. All other steps that support the accomplishment of the primary action are considered secondary actions. The appropriate operation processing chart (OPC) symbol of ○ for an operation and □ for an inspection shall be recorded after each corresponding step in the method. Large symbols shall be used to identify each major step and small symbols to identify substeps. Each symbol shall be numbered according to the type of symbol; for example, ① ② ③ $\boxed{1}$ ④ ⑤ ⑥ $\boxed{2}$

10. Preparation Instructions (Continued)

$\boxed{3}$ indicating six operation actions and three inspection actions.

10.2.8.3 Time. Opposite each action symbol, enter the estimated or observed time to perform the action in minutes and seconds.

10.2.9 Examination. Enter brief statements that answer WHAT, WHERE, WHY, WHEN and HOW for the primary action contained in the PRESENT METHOD column. Statements shall be entered that may assist in developing a better step or procedure in the create-and-develop phase of the PES. Entries are not required on the PES for a step in the present procedure which remains unchanged after questioning, but entries pertaining to the elimination or changes to procedural steps shall be entered to the right of the symbol reflecting the present procedural action. When the questioning and the entering of remarks has been completed for each primary action in the present procedure, remaining secondary actions in the procedure shall be examined to see how they have been affected. Elimination of primary actions should eliminate or change most supporting steps. Any secondary actions remaining in the PRESENT METHOD column shall be questioned for necessity and remarks shall be entered in the examination column of the PES.

10.2.10 Create and develop. A step-by-step maintenance procedure for accomplishing the MR by a new "improved" method shall be developed and entered on the PES. Information shall be entered for each procedure pertaining to: time, tools, parts, materials, and test equipment; warnings, cautions, notes; related maintenance; and the number of men and their skill levels.

10.2.10.1 Improved method. Specify in the new procedure by:

(a) Eliminating unnecessary steps in the procedure which do not support the accomplishment of the primary actions.

(b) Simplifying tasks.

(c) Changing the sequence or rearranging actions.

(d) Combining tasks when possible.

10.2.10.2 Symbol. As the new procedure is being completed, it shall be entered by symbols in the symbol column. Symbols and respective items shall be transferred from the record columns to the create and develop columns for steps that are not eliminated. A no change note shall be entered when a step remains the same in the improved method column. A step that is simplified shall be entered in the simplified version with its symbol and number from the RECORD column and the new time entered as appropriate.

10.2.10.3 Time. Enter the time, in minutes and seconds, for each step in the procedure as it is developed. The time shall be entered immediately to the right of the symbol for the step developed. When the improved method is completed, the time entered for each step shall be totalled by rate on the last PES. The total shall be converted to hours and tenths of hours.

10. Preparation Instructions (Continued)

10.2.10.4 Tools, parts, materials, test equipment. Across from each applicable step in the procedure being developed, indicate the tools, parts, materials, and test equipment necessary to accomplish the maintenance.

10.2.10.5 Warnings, cautions, notes. Warnings, cautions, and notes shall be entered horizontally across from the corresponding procedural step on the PES.

10.2.10.6 Related maintenance. Enter a documented related maintenance requirement. Enter any task which, in part, does or redoes some of the steps of the task being developed that would result in a savings of manpower or material resources. The MR with the less frequent periodicity shall identify the periodicity code of the more frequent requirement as the related maintenance requirement so that proper advantage can be taken during scheduling of the requirements. The periodicity code; for example, W-1, S-2, of the more frequent periodicity shall be entered in this column when it has been determined:

a. That a bona fide relationship with a savings in man-hours or material exists.

b. The procedure under development is of a less frequent periodicity. When no related maintenance items are applicable, the word NEON (capitalized) shall be entered in this column.

10.2.10.7 Number of men and rate. As each step is being developed in the improved method, determine an accurate rate associated with the procedural step and enter the RATE and the quantity of men required in the RATE column on the PES.
