INCH-POUND

MIL-P-70762 (AR)
AMENDMENT 2
01 February 1996
SUPERSEDING
AMENDMENT 1
30 September 1991

MILITARY SPECIFICATION

PROPELLANT, COMPOSITE, CAST, FOR USE IN
SIMULATOR, MISSILE: SAGGER XM27

This Amendment forms a part of Military Specification MIL-P-70762 (AR), dated 12 April 1990, and is approved for use by the U.S. Army Armament, Research, Development and Engineering Center and is available for use by all Departments and Agencies of the Department of Defense.

PAGE 1

* Title: Delete "SIMULATOR, MISSILE: SAGGER XM27" and substitute "SIMULATOR, ANTI-TANK GUIDED MISSILE SIGNATURE: M27."

PAGE 6

3.3.4 Delete ".890 ± 50 calories per gram" and substitute "850 ± 50 calories per gram."

PAGE 7

4.3.1 Delete paragraph 4.3.1 in its entirety and substitute the following paragraph:

"4.3.1 Submission. The contractor shall submit a first article sample as designated by the Contracting Officer for evaluation in accordance with the provisions of 4.3.2. The first article sample shall consist of five (5) blocks of propellant for lots of multiple mixer loads or three (3) blocks of propellant for lots of a single mixer load. The sample propellant shall have been vacuum cast and cured in accordance with note two (2) of drawing 12576572. Each block shall be large enough for all first article tests of Section 4.3.2, but

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

shall not be larger than 700 cubic inches. One of the five sample blocks shall be cast from the first mixer load and one from the last mixer load of the propellant lot. The three remaining sample blocks shall be randomly taken from the propellant mix if the lot contains more than one mixer load. If the lot is one mixer load, then one sample block shall be taken from the top, one from the bottom, and one from the middle. These samples shall be obtained from the first production lot which has been produced by the contractor using the same production process, procedures and equipment as will be used in fulfilling the contract. All material shall be obtained from the sources of supply as will be used in regular production."

PAGE 9

4.4.4 Delete paragraph 4.4.4 in its entirety, and substitute with:

"4.4.4 Quality conformance sampling and testing. The quality conformance sample shall consist of five (5) blocks of propellant for lots of multiple mixer loads or three (3) blocks of propellant for lots of a single mixer load. These sample blocks shall have been vacuum cast and cured in accordance with note two (2) of drawing 12576572. Each sample block shall be large enough to do the testing required but not larger than 300 cubic inches. One of the five sample blocks shall be cast from the first mixer load and one from the last mixer load of propellant lot. The remaining three (3) sample blocks shall be randomly taken from the propellant lot if a lot contains more than one mixer load. If the lot contains only one mixer load, then one sample block shall be cast from the top, one from the bottom, and one from the middle of the lot. Each of the sample blocks shall be subjected to all the tests of Section 3 and Section 4 of this specification. If any of the samples do not meet the requirements of Section 3, the lot shall be rejected."

Note: The margins of this amendment are marked with asterisks to indicate where changes (additions, modifications, corrections, deletions) from the previous issue were made. This was done as a convenience only and the Government assumes no liability whatsoever for any inaccuracies in these notations. Bidders and contractors are cautioned to evaluate the requirements of this document based on the entire content irrespective of the marginal notations and relationship to the last previous issue.
