FOREWORD

1. This military standard is approved for use by the Naval Sea Systems Command, Department of the Navy, and is available for use by all Departments and Agencies of the Department of Defense.

2. Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Commander, Naval Sea Systems Command, SEA 55Z3, Department of the Navy, Washington, DC 20362-5101, by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

1. SCOPE

1.1 Scope. This standard establishes requirements for the configuration and location of the photoluminescent marking system.

2. APPLICABLE DOCUMENTS

2.1 Government documents.

2.1.1 Specifications, standards and handbooks. The following specifications, standards and handbooks form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those listed in the issue of the Department of Defense Index of Specifications and Standards (DoDISS) and supplement thereto, cited in the solicitation (see 6.2).

SPECIFICATIONS

FEDERAL

A-A-50598	Kit, Photoluminescent Marking.
TT-E-489	Enamel, Alkyd, Gloss, Low VOC Content.

STANDARDS

FEDERAL

FED-STD-595	Colors .

(Unless otherwise indicated, copies of federal and military specifications and standards are available from the Standardization Documents Order Desk, Bldg. 4D, 700 Robbins Avenue, Philadelphia, PA 19111-5094.)

2.1.2 Other Government publications. The following other Government publications form a part of this document to the extent specified herein. Unless otherwise specified, the issues are those cited in the solicitation.

NAVSEA S9086-VD-STM-000, Chapter 631 - Preservation of Ships in Service (Surface Preparation and Painting).

(Application for copies should be addressed to the Standardization Documents Order Desk, Bldg. 4D, 700 Robbins Avenue, Philadelphia, PA 19111-5094.)

2.2 Order of Precedence. In the event of a conflict between the text of this standard and the references cited herein, the text of this standard shall take precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. DEFINITIONS

3.1 Photoluminescent. Photoluminescent describes the capability of a material to emit light only as a result of excitation by exposure to an external source of incandescent, fluorescent, or ultraviolet light.

Source: https://assist.dla.mil -- Downloaded: 2026-10-24T01:42Z
Check the source to verify that this is the current version before use.

3.2 Marking. Marking is the application of primer; photoluminescent paint; stenciled letters, numbers, and figures; and sealer in the configuration of the photoluminescent system.

3.3 Base coat Primer. Base coat primer is the initial coating applied over the entire dimensional area of the marking.

3.4 Striping. Striping is the paint used in the stenciling of letters, numbers, and figures.

3.5 Sealer. Sealer is the clear, nonyellowing, protective topcoat applied over the entire dimensional area of the marking.

3.6 Excitation Lighting. Excitation lighting is any ambient light source to which the photoluminescent markings are exposed.

4. GENERAL REQUIREMENTS

4.1 Photoluminescent marking system locations. Unless otherwise specified, markings shall be located such that they receive maximum exposure to excitation lighting. Markings shall not be located on weather decks or areas where they may be visible from weather decks.

4.2 Markings.

4.2.1 Dimensions. The overall dimensions of the markings shall be as specified herein. All measurements are in inches unless otherwise specified. Dimensions marked with an asterisk (*) indicate that the spaces between letters and numbers shall be of uniform width. Typical spacing is 3/8 inch between letters.

4.2.2 Centering. Unless otherwise specified, markings required on doors, panels, cabinets, and containers shall, so far as practicable, be centered top to bottom and left to right on the structure.

4.2.3 Photoluminescent paint. Photoluminescent paint shall conform to A-A-50598.

4.2.4 Striping. Paint for striping shall conform to TT-E-489. Colors shall be in accordance with FED-STD-595. Colors specified shall conform to the following color numbers:

Color	Number
Red	11105
Green	14062
Black	17038

4.2.5 Base coat primer. Base coat primer shall conform to A-A-50598.

4.2.6 Sealer. Top coat sealer shall conform to A-A-50598.

Source: https://assist.dla.mil -- Downloaded: 2026-10-24T01:42Z
Check the source to verify that this is the current version before use.

4.2.7 Compatibility. Paint components shall be compatible with all other components .

4.3 Stencil material. Stencil material shall conform to A-A-50598.

4.4 Marking application.

4.4.1 Base coat primer. The base coat shall be bright white in color and shall be applied over the entire dimensional area of the marking in accordance with the manufacturer's detailed application instructions. Surface preparation of previously painted surfaces shall be in accordance with NAVSEA S9086-VD-STM-000/CH-631.

4.4.2 Photoluminescent paint. A minimum of two coats of photoluminescent paint shall be applied over the entire dimensional area of the base coat in accordance with the manufacturer's detailed application instructions. Visible brush marks shall be minimized.

4.4.3 Top coat sealer. The entire dimensional area of the marking shall be covered with clear, nonyellowing sealer in accordance with the manufacturer's detailed application instructions.

4.4.4 Stenciled letters, numbers, and figures. Stenciled letters, numbers, and figures shall be applied over the clear sealer paint as specified herein in accordance with figures 1 through 58.

4.5 Exit, decontamination (decon) station, and first aid/battle dressing station directional markings. Exit, decon station, and first aid/battle dressing station directional markings shall be located on a vertical surface within five feet of each compartment access, except where the compartment opens directly to weather. In compartments having dual egress routes through the space, both routes shall be marked. Routes shall be marked at intervals not to exceed 15 feet. Markings shall be on the same side of compartments or passageways insofar as practicable, and shall be located such that they are easily visible from the surrounding area, and exposed to direct lighting for excitation. Unless otherwise specified, the bottom edges of directional markings shall be located not less than 6 inches or greater than 23 inches above the deck. Where directional markings are collocated, markings shall be applied in a vertical arrangement such that the bottom edge of the lowest marking shall be located not less than 6 inches from the deck, and the top edge of the uppermost marking shall be located not greater than 30 inches from the deck. Where collocation is required, exit markings shall be the lowest marking, and first aid/battle dressing station shall be the uppermost marking.

4.6 Prohibited photoluminescent marking system locations. Photoluminescent markings are prohibited in the following locations:

(1) Doors, hatches, and scuttles opening to weather.
(2) Submarine reactor compartments.
(3) Portable fire extinguisher cylinders.
(4) Nuclear powered surface ship reactor compartments.

Source: https://assist.dla.mil -- Downloaded: 2026-10-24T01:42Z
Check the source to verify that this is the current version before use.

5. DETAILED REQUIREMENTS

5,1 Marking requirements for submarines.

5.1.1 EAB manifolds. EM manifolds shall be marked with a 6 inch wide strip of photoluminescent paint in the center of the manifold. If EAB manifold is recessed in the overhead, place an EAB stencil (Figure 4) directly adjacent to the opening. Photoluminescent paint is not required on EAB manifolds located behind doors marked in accordance with 5.1.15, and those at individual berths.

5.1.2 Escape hatches. Escape hatches shall be marked with a 2-inch wide band of photoluminescent paint around the outside circumference applied to the under side of the deck. Escape hatch operating handles shall be painted with photoluminescent paint. Where interferences prevent a continuous band around the hatch a non-continuous band that clearly outlines the hatch is acceptable.

5.1.3 Inclined ladders. Each dust shield below inclined ladders shall be marked with a horizontal stripe of photoluminescent paint applied above the lowest and uppermost steps.

5.1.4 Vertical ladder rails. Rails of vertical ladders leading to escape hatches shall be marked with photoluminescent paint along their entire length, Rails of vertical ladders leading to scuttles that open directly to weather shall be marked with photoluninescent paint applied from the bottom of the ladder rail up to the midpoint of the vertical length of the rail.

5.1.5 Transverse bulkhead hatches. Transverse bulkhead hatches shall be marked with a 2-inch wide band of photoluminescent paint applied around the perimeter of the hatch on both sides of the transverse bulkhead. Where interferences prevent a continuous band around the hatch a non-continuous band that clearly outlines the hatch is acceptable.

5.1.6 Lower access hatches. Lower access hatches shall be marked with a 2-inch wide band of photoluminescent paint applied around the perimeter of the hatch. Where a lower access hatch is visible from the control room this requirement shall not apply. Where interferences prevent a continuous band around the hatch a non-continuous band that clearly outlines the hatch is acceptable.

5.1.7 Flashlights. Flashlights stowed in passageways shall be marked with a 2-inch wide band of photoluminescent paint applied either around the flashlight holder, or to the exposed upper portion of the bracket, as applicable to the flashlight installation.

5.1.8 Telephone intercom (4MC) systems. Handset holders for 4MC telephone intercom systems shall be marked with photoluminescent paint,

5.1.9 Firehose racks. Half-circle flange faces on firehose racks shall be painted with photoluminescent paint,

5.1.10 Fireplug caps. Fireplug caps shall be painted with photoluminescent paint . Bleeder holes shall not be painted over.

Source: https://assist.dla.mil -- Downloaded: 2026-10-24T01:42Z
Check the source to verify that this is the current version before use.

5.1.11 Markings shall be applied to the door of each OBA canister cabinet and to each side of the cabinet that is normally visible as shown in figure 1. Stenciled letters shall be painted red in accordance with section 4.2.4.

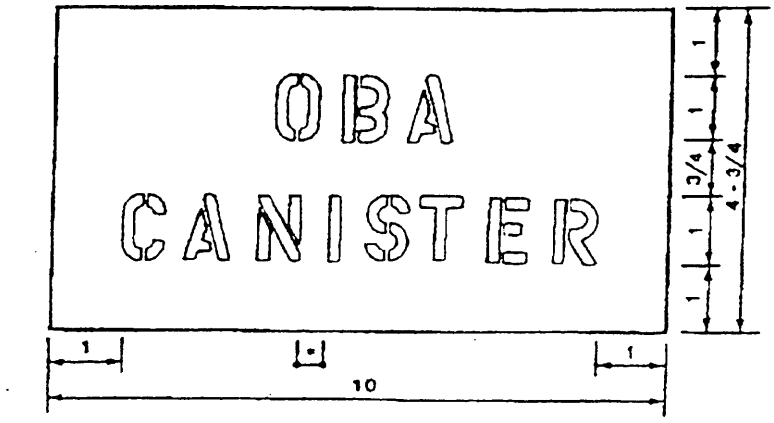

FIGURE 1. OBA canister cabinet marking.

5.1.12 Markings shall be applied to the door of each OBA storage cabinet as shown in figure 2. Stenciled letters shall be painted red in accordance with section 4.2.4.

Check the source to verify that this is the current version before use.

5.1.25 Frame location markings shall be applied at least once in each compartment less than 24 feet in fore and aft length as near the mid-distance as practicable. For compartments greater than 24 feet in fore-and-aft length, one frame marking shall be applied every 24 feet. Markings shall be applied as shown in figure 19. Stenciled letters shall be painted black in accordance with section 4.2.4.

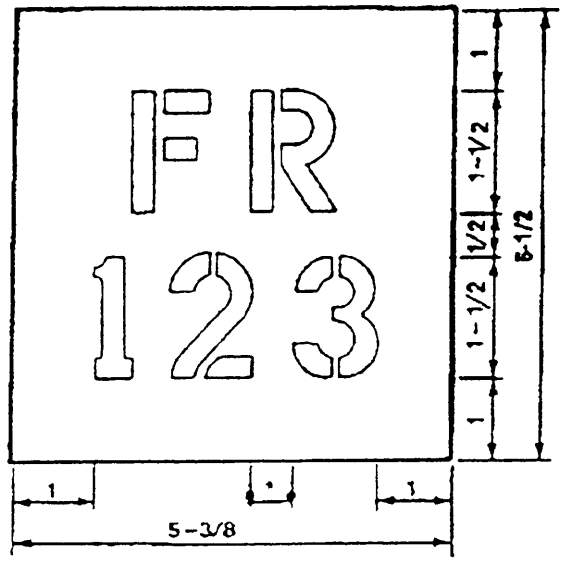

FIGURE 19. Typical frame number marking.

5.2 Marking requirements for surface ships.

5.2.1 Markings for doors along egress routes. Exit doors along egress routes shall be marked with a 2-inch wide band of photoluminescent paint applied to the entire perimeter of the door. Where interferences prevent a continuous band around the door a non-continuous band that clearly outlines the door is acceptable.

5.2.2 Hatch coamings. Hatch coamings along egress routes shall be marked with a 2-inch wide band of photoluminescent paint applied around the inside perimeter of the coaming. Where hatches open directly to weather, a 2-inch wide band of photoluminescent paint shall be applied to the underside of the deck around the entire perimeter of the hatch. Where interferences prevent a continuous band around the hatch coaming a non-continuous band that clearly outlines the hatch coaming is acceptable .

5.2.3 Kickout panels. Kickout panels shall be marked with a 2-inch wide band of photoluminescent paint applied to each side of the door or bulkhead around the entire perimeter of the panel.

5.2.4 Inclined ladders. Inclined ladders shall be marked with photoluminescent paint applied to the entire length and width of the visible flange of the ladder frame . Inclined ladders with folding leaf ladder chutes shall be marked with exit

Source: https://assist.dla.mil -- Downloaded: 2026-10-24T01:42Z
Check the source to verify that this is the current version before use.

directional markings as shown in figures 47 or 48, as appropriate. The marking shall be applied at the top and bottom of the chute when in the stowed position. Stenciled figures shall be painted green in accordance with section 4.2.4. Inclined ladders leading to hatches opening to weather shall have photoluminescent paint applied to the visible flange of the ladder frame from the bottom of the ladder frame up to the midpoint of the length of the frame.

5.2.5 Vertical ladder rails . Rails of vertical ladders leading to escape hatches and scuttles shall be marked with photoluminescent paint along their entire length. Rails of vertical ladders leading to hatches and scuttles that open directly to weather shall be marked with photoluminescent paint applied from the bottom of the ladder rail up to the midpoint of the vertical length of the rail.

5.2.6 EAB manifolds, EAB manifolds shall be marked with a 6 inch wide strip of photoluminescent paint in the center of the manifold. If EAB manifolds are recessed i-n the overhead, place an EAB stencil (Figure 57) directly adjacent to the opening.

5.2.7 Markings shall be applied to the door of each OBA canister cabinet and to each side of the OBA canister cabinet that is normally visible as shown in figure 20. Stenciled letters shall be painted red in accordance with section 4.2.4,

5.2.24 Firemain segregation valves classified ZEBRA shall be marked. Markings shall be applied to the firemain piping insulation at a distance not greater than 12 inches from the segregation valve where they receive the most direct illumination. In those cases where it is impracticable to apply markings directly to the firemain piping insulation, the marking shall be applied to a metal plate which shall be attached to the segregation valve or to the adjacent bulkhead. Stenciled letters shall be painted red in accordance with section 4.2.4,

5.2.33 Markings shall be applied to EAB mask stowage cabinets as shown in figure 57. Stenciled letters shall be painted red in accordance with section 4.2.4.

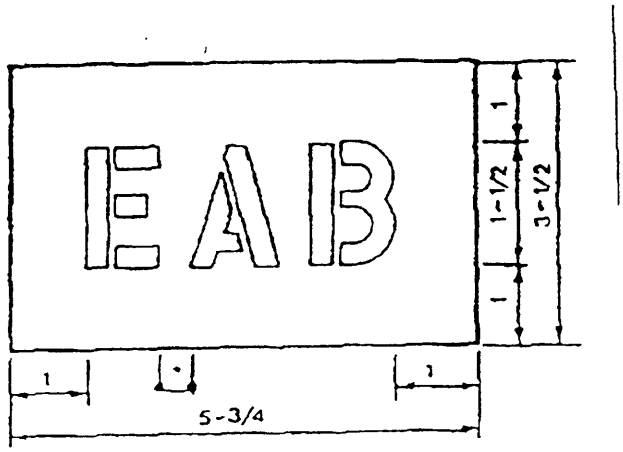

FIGURE 57. EAB mask stowage cabinet marking.

5.2.34 Markings for AFFF actuators shall be applied at bilge sprinkling actuator stations, solenoid operated pilot valves (SOPV) not within AFFF proportioning pump stations, and at each remote actuation point. Markings shall be applied on the adjacent bulkhead as near as practicable to immediately above the actuators as shown in figure 58. Stenciled letters shall be painted red in accordance with section 4.2.4.

6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

6.1 Intended use. The photoluminescent marking system is used to provide rapid emergency egress information, and to identify the locations of selected damage control systems and equipment in situations involving loss of lighting. Such markings are intended for applications that will be observed for as long as three hours, but remain visible up to eight hours for dark-adapted observation.

6.2 Issue of DODISS. When this standard is used in acquisition, the issue of the DODISS to be applicable to this solicitation must be cited in this solicitation (see 2.1.1).

6.3 Subject term (key word) listing.

Emergency Egress
Emergency Exit

STANDARDIZATION DOCUMENT IMPROVEMENT PROPOSAL

INSTRUCTIONS

1. The preparing activity must complete blocks 1, 2, 3, and 8. In block 1, both the document number and revision letter should be given.
2. The submitter of this form must complete blocks 4, 5, 6, and 7.
3. The preparing activity must provide a reply within 30 days from receipt of the form.

NOTE: This form may not be used to request copies of documents, nor to request waivers, or clarification of requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements.

I RECOMMEND A CHANGE:	1. DOCUMENT NUMBER MIL-STD-2046(SH)	2. DOCUMENT DATE (YYMMDD) 22 MAY 1992

3. DOCUMENT TITLE

4. NATURE OF CHANGE *(Identify paragraph number and include proposed rewrite, if possible. Attach extra sheets as needed.)*
