DATA ITEM DESCRIPTION

Form Approved
OMB No. 0704-0188

1. TITLE	2. IDENTIFICATION NUMBER
BATTERY SELECTION PROGRAM REPORT	DI-MGMT-80772

3. DESCRIPTION/PURPOSE

3.1 The purpose of this DID is to provide information on military systems, sub-systems, support equipment, and facilities battery requirements. This information will be used to control the proliferation of batteries.

4. APPROVAL DATE (YYMMDD)	5. OFFICE OF PRIMARY RESPONSIBILITY (OPR)	6a. DTIC APPLICABLE	6b. GIDEP APPLICABLE
890221	N/AIR-5363		

7. APPLICATION/INTERRELATIONSHIP

7.1 This DID contains the format and content preparation instructions for the data product generated by the specific and discrete task requirement as delineated in the contract.

7.2 This DID is applicable to the acquisition of systems, sub-systems, support equipment, and facilities.

Continued on page 2.

8. APPROVAL LIMITATION	9a. APPLICABLE FORMS	9b. AMSC NUMBER
		N4688

10. PREPARATION INSTRUCTIONS

10.1 General. The battery information provided shall document in detail the following requirements:

10.1.1 The function that the battery provides to the system, sub-system, support equipment or facility (i.e. start, emergency, primary source, etc.);

10.1.2 Design and expected battery performance;

10.1.3 Environmental conditions the battery must survive and provide specification performance; and

10.1.4 Shelf life and charging system data.

10.2 Content Requirements.

10.2.1 Introductory information:

a. Name of the system, sub-system, support equipment, or facility.

b. Contractors name, address, telephone number, and cognizant individual.

c. A brief description of system, equipment or facility.

Continued on page 2.

11. DISTRIBUTION STATEMENT

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T10:39Z
Check the source to verify that this is the current version before use.

7. Application/Interrelationship (Cont'd)

7.3 It is not intended that all the requirements contained herein should be applied to every program (development or non-development) or program phase. However, it shall be required for the acquisition of military systems, sub-systems, equipment, and facilities which will contain batteries.

7.4 This DID will be most effective in the concept/development phase of the acquisition process..

7.5 Portions of this DID are subject to tailoring depending upon the program phase in which it is applied in the solicitation/contract, item being procured, and type battery being used.

7.6 If a Military Specification battery is being used, only paragraph 10.2.2.j applies.

---

10. Preparation Instructions (Cont'd)

d. Purpose and function of battery (i.e. start, emergency, primary source of power, etc.).

10.2.2 Battery information:

a. Dimensions (metric). Attach drawing or sketch if available. Include the dimension with and without connector for the dimension where pertinent.

b. Weight (metric).

c. Voltages the battery must supply.

d. Current each voltage section must supply. Provide a battery current profile for each voltage section if battery current changes with time.

e. For equipment utilizing batteries to perform a start function, provide the following start information:

(1) Start current required vs time.

(2) Maximum and minimum potential allowed before and during start.

(3) Identify ampere-hours removed from the battery during preparation for start.

Check the source to verify that this is the current version before use.

10. Preparation Instructions (Cont'd)

f. For equipment utilizing batteries to perform a emergency function, provide following emergency information:

(1) Identify typical battery loading during emergency.

(2) The required operating time during emergency loading.

g. Identify how cells in the battery are connected (series, parallel, or series-parallel).

h. Identify battery connector specification and connector part number.

i. Electrochemistry (i.e. lead-acid, nickel-cadmium, lithium, etc.)

j. Identify battery Military specification, military specification sheet, and their dates.

k. Identify battery commercial specification and date. Also identify the commercial battery part number.

l. Rechargeable or non-rechargeable battery.

j. Number of cells in the battery.

k. Battery capacity measured in ampere-hours at the C-Rate and 25°C..

10.2.3 Cell Information: (applicable if only an individual cell is used)

a. Dimensions (metric). Attach a drawing or sketch if available. Include dimensions with and without connector for the dimension where pertinent.

b. Voltage the cell must supply.

c. The current the cell must provide. If the current changes with time provide a copy of the current profile.

d. Type of cell connection (terminal post, recessed threaded stud, tab, etc.).

e. Electrochemistry.

f. American National Standards Institute (ANSI) size designation (A, AA, C, D, etc.)

g. Military specification, specification sheet, and their publication dates.

Check the source to verify that this is the current version before use.

10. Preparation Instructions (Cont'd)

h. Commercial specification and commercial part number.

i. Rechargeable or non-rechargeable.

j. Cell capacity measured in ampere-hours at the C-Rate and 25°C.

10.2.4 Environmental Information: (applicable to both batteries and cells)

a. Shock levels operating, non-operating, and crash safety.

b. Vibration levels sine and random. Both operating and non-operating.

c. Maximum high temperature operating and non-operating.

d. Maximum low temperature operating and non-operating.

e. Shelf life at 25°C and maximum high temperature non-operating.

f. Service life at maximum low temperature operating, 25°C, and maximum high temperature operating.

10.2.5 System Information: (applies to both batteries and cells)

a. Number of batteries identified in paragraph 10.2.2 or cells identified in paragraph 10.2.3 are in the equipment.

b. Type of charging method used (i.e. constant voltage, constant current, etc.).

c. For equipment containing chargers, provide the following charging information:

(1) If a constant current charge method is used identify the number of charge steps, current of each charge step, and logic (voltage or time) for starting or ending each charge step. Justify why this type of charge is required.

(2) If a constant potential charge method is used identify the voltage the charge will be set at and indicate if it is adjustable.

10.3 Information Format:

10.3.1 The information shall be provided in letter format on 8½ inch by 11 inch paper.

10.3.2 Information can be provided as enclosures with data presented in tabular or graphical format.
