DATA ITEM DESCRIPTION

Form Approved
OMB No. 0704-0188

2 TITLE	1 IDENTIFICATION NUMBER
Integrated Tactical Warning and Attack Assessment (TW/AA) System Interface Control Document (ICD)	DI-MISC-80847

3. DESCRIPTION / PURPOSE

3.1 Integrated Tactical Warning and Attack Assessment (TW/AA) System Interface Control Documents [Short Title: ICDs] are the formal documents used for describing the technical and functional characteristics of interfaces for transmitting and receiving data between information processors of the Integrated TW/AA System.

(Continued on page 2)

4. APPROVAL DATE (YYMMDD)	5 OFFICE OF PRIMARY RESPONSIBILITY (OPR)	6a. DTIC REQUIRED	6b. GIDEP REQUIRED

7. APPLICATION / INTERRELATIONSHIP

7.1 This Data Item Description (DID) contains format and content preparation instructions for the data product generated by the specific and discrete task requirement as delineated in the contract.

7.2 This DID applies to Integrated TW/AA programs having a shared boundary (interface) between two identifiable entities. This DID shall apply to any contract which will develop new Integrated TW/AA systems, components, elements, or subsystems, including the ICDs;

10 PREPARATION INSTRUCTIONS

10.1 Reference documents. The reference document cited herein, including its approval date and dates of any amendments, notices, and revisions, shall be as specified in the contract.

10.2 Contents. ICDs shall be prepared for both the internal and external data communications. Refer to the SIO ICD Development Standard for further guidance on contents. The ICDs shall be structured so the format of the information presented shall reflect the layering of the data communications functions implemented. The data communications protocols between peer layers and the interfaces between adjacent layers shall both be described. The ICDs shall trace the path of every type of message through the system in terms of the functions performed to obtain, maintain, and release the connection that is used to transmit the message from source to destination. The ICD shall prescribe the best interface design based upon an analysis of the requirements of interfacing entities and any constraints or limitations imposed by external forces or state-of-the-art considerations.

10.2.1 Level of Detail. Both Internal and External ICDs shall include descriptions of the applicable functions and requirements in sufficient detail to present a clear understanding of what is to be accomplished. Refer to the SIO ICD Development Standard for further guidance on interface definition. (Continued on page 2)

11 DISTRIBUTION STATEMENT

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

Check the source to verify that this is the current version before use.

3. Description/Purpose (Continued):

3.2 ICDs are used for interface design control to ensure that all interfacing work and design accomplished under different contracts can function without degradation to the Integrated TW/AA System through all expected operating conditions.

---

7. Application/Interrelationship (Continued)

or which will modify ICDs for existing Integrated TW/AA systems.

7.3 External ICDs have a shared boundary between two distinct systems; examples: Space Command Center (SPACC) to Warning Display Terminal (WDT), or Communication System Segment (CSS) to Cobra Dane.

7.4 Internal ICDs have a shared boundary between two components, elements, or subsystems within the same system; examples: preprocessor to processor, or central processor to communications processor.

7.5 The International Organization for Standardization Open Systems Interconnection (OSI)/Reference Model (RM) seven layer approach is used to define the physical and functional characteristics of an interface. The model places the various functions and services of orderly communications into layers, but does not specify any particular protocol or network architecture.

7.6 The System Integration Office (SIO) Interface Control Document (ICD) Development Standard 4000 is the reference document. Send requests for copies of the SIO ICD Development Standard to:

SIO/SYCI
Peterson AFB, CO
80914-5001

7.7 This DID shall be used in lieu of DI-E-30131 and DI-E-5550 when developing ICDs for the Integrated TW/AA System.

---

10. Preparation Instructions (Continued):

10.3 Format. The format of the ICDs may follow a two tier structure: General ICDs and Specific ICDs. When a two tier structure is used, the General ICD shall contain common information about a system or a group of systems. The Specific ICD shall contain information pertaining to an individual system. In some situations, the two tier structure will minimize redundant information pertaining to an individual system. In some cases, only the General ICD will be required. Refer to the SIO ICD Development Standard for further guidance on format.
