MILITARY SPECIFICATION

Designs and Drawings, Inspection Equipment

1. SCOPE

1.1 This specification covers engineering requirements for the preparation of Inspection Equipment Lists and designs and drawings of equipment prescribed thereon. This inspection equipment is to be used in performance of final inspection of Government materiel.

1.2 Inspection equipment designs and drawings to be developed in accordance with this specification will:

a. Provide an adequate basis for the procurement of inspection equipment.

b. Serve as a standard for the evaluation of existing equipment.

c. Provide adequate control of characteristics affecting reliability, interchangeability, function, and performance.

d. Insure that equipment resulting from such designs has maximum capability for universal application and adaptable to either industrial production or field maintenance use, if desired.

1.3 This specification further prescribes the requirements for utilization of calibrated standards in conjunction with the inspection equipment to be developed.

2. APPLICABLE DOCUMENTS

2.1 The following Specification and Publications of the issue in effect on date of invitation for bids form a part of this specification to the extent specified herein.

PUBLICATIONS

Military

ORD-M608-12	Acceptance Inspection Equipment Design Handbook and commodity annexes thereto
ORDM 4-4	Ordnance Corps Engineering and Drafting Manual and Commodity annexes thereto

(Copies of Specifications and Publications required by contractors in connection with specific procurement functions should be obtained from the procuring activity or as directed by the contracting officer.)

3. REQUIREMENTS

3.1 Engineering Analysis. The contractor's inspection equipment activity shall conduct an analysis of dimensions, tolerances, performance, and material requirements on the product drawing and specifications to determine feasibility for application of inspection equipment envisioned for the control of those requirements and specifically for dimensions and tests required by Section 4 of the specification covering the item.

3.2 Inspection Equipment Lists. Inspection Equipment Lists shall be prepared in accordance with instructions and format in ORD-M608-12 and shall prescribe all of the inspection equipment required to support the quality assurance provisions in the specification for the specified item.

3.2.1 Application of Existing Designs. Existing Government designs as made known by an assigned Government Technical Representative shall be prescribed whenever practicable.

3.2.2 Setting or Calibrating Devices. Where required, appropriate instruments or special devices for acceptance inspection, setting, calibration, and maintenance of inspection equipment shall be designated.

3.2.3 Application of Standardized Designs. Standardized and/or commercial inspection equipment which is widely recognized and used by industry should be specified to the greatest extent practicable.

3.2.4 Approval of Inspection Equipment Lists. Inspection Equipment Lists shall be approved by the assigned Government Technical Representative before design of equipment is initiated.

3.3 Design. Acceptance inspection equipment shall be designed in accordance with the requirements outlined in ORD-M608-12, and with the following basic concepts:

Check the source to verify that this is the current version before use.

3.3.1 Simplicity of design shall be stressed.

3.3.2 Equipment design shall be such that requirements for maintenance, calibration, and the need for special operator skills are minimized.

3.3.3 Equipment design shall be such that dependability and reliability can be assured with minimum maintenance.

3.3.4 Construction dimensions and tolerances shall be controlled so that the functioning features of the gage or test equipment will permit acceptance of a product which is finished to dimensions that are within the prescribed tolerance limits.

3.4 Drawings. Inspection equipment drawings are to be prepared in accordance with the engineering and drafting practices outlined in MIL-D-70327 & ORDM 4-4 and with the detailed information, format, and technical guidance provided in ORD-M608-12.

3.4.1 Legibility. Assurance of legibility shall be attained on prints made from a third generation reproducible and/or the original drawing shall provide a legible print produced via the 35MM microfilm process.

3.4.2 Drawing Numbers. Drawing numbers shall be assigned by the contractor as furnished by the assigned Government Technical Representative.

3.4.3 Drawing Distribution. The contractor's inspection equipment engineering activity shall prepare, maintain, and deliver reproducible prints of Inspection Equipment Lists, designs, and related change orders when and as these documents are approved by the Government, in accordance with mailing lists directed for use by the assigned Government Technical Representative. In addition, the contractor shall deliver sets of individual reproducible prints of above material as directed, in writing, by the assigned Government Technical Representative.

3.5 Revision Maintenance. The contractor's inspection equipment engineering activity shall review all pertinent product engineering changes made throughout the life of the contract and participate in the "Engineering Change Request - Engineering Order" system as set forth in ORDM 4-4 for all necessary changes to inspection equipment listings and inspection equipment drawings. Upon receipt of a Government approved ECR or EO, the contractor shall make the necessary revisions to the inspection equipment documents for which he is custodian.

3.6 Liaison. The contractor shall provide personnel and transportation necessary for efficient accomplishment of business which includes meetings for technical guidance, resolution of problems, approvals, etc. When "on site" meetings are considered mutually beneficial, Government personnel will visit the contractor.

4. QUALITY ASSURANCE PROVISIONS

4.1 The contractor shall submit all completed inspection equipment documents, such as Inspection Equipment Lists, designs, and other related engineering materiel within the scope of this specification, to the assigned Government Technical Representative for approval.

4.2 Compatability of the inspection equipment documents with the quality assurance provisions of the item specification will be periodically verified by the assigned Government Technical Representative.

4.3 The assigned Government Technical Representative will examine all Equipment Lists prior to initiation of equipment design to determine conformance to the basic concepts outlined in ORD-M608-12.

4.4 At the expiration of the contract, the assigned Government Technical Representative will determine that all required documents are in conformance with the quality requirements outlined in paragraphs 3.2 and 3.4.

5. PREPARATION FOR DELIVERY

5.1 Prior to or upon completion of the contract, all inspection equipment documents, current or in back file, shall be delivered to the Government as directed by the contracting officer.

6. NOTES

6.1 Intended Use. It is intended that item specification be used to acquire for the Government complete technical data which can be used for procurement of equipment used to inspect the quality assurance provisions of specified product. This data will serve as a standard for evaluation of contractor equipment and will be available to future contractors providing the same end product.

NOTICE: When Government drawings, specifications, or other data are used for any purpose other than in connection with a definitely related Government procurement operation, the United States Government thereby incurs no responsibility nor any obligation whatsoever; and the fact that the Government may have formulated, furnished, or in any way supplied the said drawings, specifications, or other data, is not to be regarded by implication or otherwise as in any manner licensing the holder or any other person or corporation, or conveying any rights or permission to manufacture, use, or sell any patented invention that may in any way be related thereto.
