MIL-F-48616/301
29 JULY 1977

MILITARY SPECIFICATION SHEET

FILTER, WIDE BANDPASS, 7.7 to 11.7 MICROMETERS,
SPECIAL REQUIREMENTS FOR

The complete requirements for procuring the wide bandpass filter described herein shall consist of this document and the latest issue of MIL-F-48616.

This specification is approved for use by all Departments and Agencies of the Department of Defense.

Requirements for the wide bandpass filter (coated substrate) are given in the following paragraphs:

1. Average transmittance shall be equal to or greater than 80% from 8.3 to 11.1 micrometers.

2. Absolute 45% transmittance points shall be at wavelengths than 7.7 micrometers and less than 11.7 micrometers.

3. Absolute 5% transmittance points shall be at wavelengths than 7.5 micrometers and less than 12.1 micrometers.

4. Out of band transmittance shall be·

a. Less than 0.1% average from 1.0 to 7.0 micrometers and from 12.6 to 15.0 micrometers.

b. Less than 1.0% absolute from 1.0 to 7.0 micrometers and from 12.6 to 15.0 micrometers.

c. Less than 5% absolute from 7.0 to 7.5 micrometers and from 12.1 to 12.6 micrometers.

NOTES.

1. Spectral resolution required to verify the above requirements shall be 0.03 micrometer or less.

2. Scan speed and time constant shall be set such that scan time is ten (10) minutes or greater fom 7.0 to 12.6 micrometers and twenty (20) minutes or greater total time for the two regions from 1.0 to 7.0 micrometers and 12.6 to 15.0 micrometers.

3. The spectral requirements stated above apply at an angle of incidence ranging from 0° to 5° and at ambient temperature. Measurements will be made at an angle of incidence within this range (See 6.4b and 6.4c).
