MILITARY STANDARD

INTERFACE STANDARD FOR SHIPBOARD SYSTEMS

SECTION 703

WEAPONS HANDLING

This Military Standard is approved for use by the Department of the Navy, and is available for use by all Departments and Agencies of the Department of Defense.

1. GENERAL AND SCOPE

1.1 General. The policies and procedures established by DOD-STD-1399 are mandatory. This section and the basic standard, i.e., DOD-STD-1399, are to be viewed as an integral single document.

1.2 Scope. This section establishes interface requirements for the coordination of the design of shipboard weapons handling systems and the weapons to ensure compatibility between the handling systems and the weapons involved.

2. REFERENCED DOCUMENTS

2.1 Not applicable.

3. DEFINITIONS

3.1 Weapon handling systems. Weapon handling systems comprise those systems/equipment, devices, support services, safety facilities, and shipboard arrangements which provide for the handling and stowage of weapons. They are concerned with the capability to handle safely and effectively all weapons on board through the phases from receipt through strikedown, stowage, assembly, ready service, strikeup, and delivery to the loading area or insertion in the loading cycle, as those phases may apply to a particular weapon and ship configuration.

4. REQUIREMENTS

4.1 Requirements. This standard applies to all activities involved in the design, production, and installation of shipboard weapons handling systems and to the weapons involved (see section 4 "Requirements" of DOD-STD-1399).

5. COORDINATION

5.1 Coordinative action. The Program/Project manager shall be responsible for initiation and continuation of an early dialogue among all the parties concerned with the interfaces addressed by this standard. Customarily, these parties include, but are not limited to: The design, production, and installation activities for the ship and its equipment; the weapon and weapon-handling equipment design, production, and installation activities; and Principle Development Activity(s) (PDA). Other parties who believe that they have an interest in interfaces addressed by this standard shall promptly make this fact known to the Program/Project manager, who shall take such action as may be appropriate.

5.2 Information exchange. The above-mentioned dialogue shall consider all available information affecting proper interface of the weapon with its handling system and with shipboard arrangements related thereto. This exchange shall include, but not be limited to: New or unusual shipboard arrangements or services required; the expected shipboard environment in port, at sea, and under combat conditions; shipboard constraints such as normal services available and weight and moment considerations; personnel safety; and known sensitivities/vulnerabilities of the weapon to the shipboard environment.

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Commander, Naval Ship Engineering Center, SEC 6124, Department of the Navy, Washington, DC 20362 by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

Check the source to verify that this is the current version before use.

5.3 Documentation. The decisions resulting from the actions specified in 5.1 and 5.2 shall be validated by the Program/Project manager and shall then be reflected in appropriate authenticated documentation such as installation control drawings (ICD) and coordination drawings (CD).

6. DEVIATIONS

6.1 Deviations. If it is deemed necessary to deviate from the characteristics specified herein the provisions of section 6 "Deviations" of DOD-STD-1399 shall be complied with. Requests for deviations shall be submitted to the Naval Sea Systems Command with copies to:

(a) Program/Project manager.
(b) NAVSEC 6161.
