COMMERCIAL ITEM DESCRIPTION

TAPE, TYPEWRITER, CORRECTION (LIFT-OFF)

The General Services Administration has authorized the use of this commercial item description.

This commercial item description covers lift-off typewriter correction tape.

Salient characteristics.

Tapes shall consist of a continuous length of plastic film coated on one side with either "sticky" (high-tack) or "dry" (low-tack) material and have both a leader and a trailer, each a minimum of 6 inches in length. High-tack has a definite adhesive or sticky feel, whereas the low-tack has a waxlike feel to the touch.

Tapes shall be of the dimensions established by the machine manufacturer for proper operations, and be firmly, evenly, and uniformly wound on spools or cores designed for proper operation with the machines specified (see note).

When properly installed in accordance with the machine manufacturer's instructions, the tape shall not tear or be cut through during the correction operation and take up smoothly, evenly and completely.

Workmanship. The plastic film shall be free from holes, tears, or blisters; the coating materials shall be smoothly and evenly applied and of uniform thickness; and the tapes shall be free of defects such as pinholes, foreign material, streaks, or other imperfections which could adversely affect performance, durability or serviceability. In addition, tapes shall be free of ragged or nicked edges.

Test. Using a chemical wood bond paper and an IBM correctable ribbon and operating the machine in the normal manner, two lines of type shall be placed on the paper. Returning to the beginning of the two lines of type, the machine shall be placed in the correction mode. With the machine in the correction mode each typed character shall be overstruct with a similar character. After completion of overstriking both lines of type, the page shall appear clean and clear with no evidence of typed characters.

Quality Assurance Provisions.

Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the supplier is responsible for the performance of all inspection requirements as specified herein.

Sampling. Sampling for inspection and tests shall be performance in accordance with MIL-STD-105, except where otherwise indicated. For purposes of sampling, a lot shall consist of all tapes of the same description manufactured under the same conditions at essentially the same time.

This specific- ... for materials in 4.4

Sampling of end item for visual examination. from each lot in accordance with Inspection Level S-3. The AQL shall not exceed exceed 2.5 percent defective. The sample shall be one tape.

Sampling of end items for tests. A random sample shall be taken from each lot in accordance with Inspection Level S-1. The AQL shall not exceed 2.5 percent defective.

Examination of end item for visual defects. Sample shall be examined for defects listed below. Any tape containing one or more defects shall be rejected. The Government reserves the right to classify any defects not listed.

Examine	Defects
Spool and tape	Not compatible with machine specified.
Width	Not as specified.
Length	Not as specified.
Leader signal	Missing
Trailer signal	Missing
Workmanship	See Workmanship paragraph

Regulatory requirements. In accordance with section 23.404 of the Federal Acquisition Regulations, the Government's policy is to acquire items composed of the highest percentage of recovered materials practicable, consistent maintaining a satisfactory level of competition without adversely affecting performance requirements or exposing the supplier's employees to undue hazards from the recovered materials.

Preservation, packaging, packing, labeling, and marking. The preservation, packaging, packing, labeling, and marking shall be as specified in the contract or order.

Note. Purchaser shall specify the tape dimensions and the machine on which the tapes are intended to be used.

When this commercial item description is used for procurement, the commercial item certification clause must appear in the solicitation
