INTERIM FEDERAL SPECIFICATION

TURKEY SLICES WITH GRAVY, THERMOSTABILIZED, TRAY PACK

This interim Federal Specification was developed by the U.S. Army Natick Research and Development Laboratories, Natick, MA 01760, based upon currently available technical information. It is recommended that Federal agencies use it in procurement and forward recommendations for changes to the preparing activity at the address shown above.

1. SCOPE

1.1 Scope. This specification covers turkey slices with gravy, thermostabilized in tray pack cans for use by the Department of Defense as a component of operational rations.

2. APPLICABLE DOCUMENTS

2.1 The following documents, of the issues in effect on date of invitation for bids or request for proposal, form a part of this specification to the extent specified herein.

Federal Specifications:

EE-S-631	-	Spices, Ground and Whole, and Spice Blends
TT-C-495	-	Coatings, Exterior, For Tinned Food Cans
JJJ-O-1866	-	Onions and Garlic, Dehydrated
JJJ-S-30	-	Salad Oil, Vegetable
PPP-B-636	-	Boxes, Shipping, Fiberboard

(Activities outside the Federal Government may obtain copies of Federal specifications, standards, and commercial item descriptions as outlined under General Information in the Index of Federal Specifications, Standards and Commercial Item Descriptions. The Index, which includes cumulative bimonthly supplements as issued, is for sale on a subscription basis by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

(Single copies of this specification, and other Federal specifications, standards, and commercial item descriptions required by activities outside the Federal Government for bidding purposes are available without charge from General Services Administration Business Service Centers in Boston, MA; New York, NY; Philadelphia, PA; Washington, DC; Atlanta, GA; Chicago, IL; Kansas City, MO; Fort Worth, TX; Houston, TX; Denver, CO; San Francisco, CA; Los Angeles, CA; and Seattle, WA.

FSC 8940

Check the source to verify that this is the currentversion before use.

(Federal Government activities may obtain copies of Federal standardization documents, and the Index of Federal Specifications, Standards and Commercial Item Descriptions from established distribution points in their agencies.)

Military Specifications:

MIL-L-1497 - Labeling of Metal Cans for Subsistence Items
MIL-L-35078 - Loads, Unit: Preparation of Nonperishable Subsistence Items, General Specifications for

Military Standards:

MIL-STD-129 Marking for Shipment and Storage
MIL-STD-900 - Bacterial Standards for Starches, Flours, Cereals, Alimentary Pastes, Dry Milks and Sugars Used in the Preparation of Canned Foods for the Armed Forces

(Copies of Military specifications and standards required by contractors in connection with specific procurement functions should be obtained from the procuring activity or as directed by the contracting officer.)

Laws and Regulations:

U.S. Department of Health and Human Services

Federal Food, Drug, and Cosmetic Act and Regulations Promulgated Thereunder (21 CFR Parts 1-199)

(Application for copies should be addressed to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.)

U.S. Department of Agriculture (USDA)

Poultry Products Inspection Regulations (9 CFR Part 381)

(Application for copies of Part 381 should be addressed to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.)

Regulations Governing the Voluntary Grading of Poultry Products and Rabbit Products and U.S. Classes, Standards, and Grades (7 CFR Part 70)

(Application for copies should be addressed to Director, Poultry Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, DC 20250.)

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:02Z
Check the source to verify that this is the current version before use.

U.S. Standards for Condition of Food Containers

(Application for copies should be addressed to the Director, Food Quality Assurance Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, DC 20402.)

Environmental Protection Agency (EPA)

National Interim Primary Drinking Water Regulations

(Application for copies should be address to the Office of Drinking Water WH550, Environmental Protection Agency, Washington, DC 20460.)

2.2 Other publications. The following documents form a part of this specification to the extent specified herein. Unless a specific issue is identified, the issue in effect on date of invitation for bids or request for proposal, shall apply:

Association of Official Analytical Chemists

Official Methods of Analysis of the Association of Official Analytical Chemists

(Application for copies should be addressed to the Association of Official Analytical Chemists, 1111 North 19th Street, Suite 210, Arlington, VA 22209.)

(Industry association specifications and standards are generally available for reference from libraries. They are also distributed among technical groups and using Federal agencies.)

3. REQUIREMENTS

3.1 First article. When specified, a sample shall be subject to first article inspection (see 4.3, 6.1, and 6.3).

3.2 Ingredients. All ingredients shall be clean, sound, wholesome, and free from foreign material, evidence of rodent or insect infestation, extraneous material, off-odors, off-flavors, and off-colors.

3.2.1 Turkey. The turkey shall be derived from chilled or frozen, ready-to-cook, young tom, young hens or yearling turkeys, or any combination of these classes. All turkey destined for use in the product shall be U.S. Grade B. Fresh chilled turkey which is to be held, shall be handled in accordance with 3.2.1.1 or 3.2.1.2.

3.2.1.1 Holding in fresh chilled state. Prior to processing, bone-in or boneless turkey may be held in the fresh chilled state until not later than

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:02Z
Check the source to verify that this is the current version before use.

the fourth day following the date of initial acceptance, provided that the temperature range of the turkey is 28°F to 36°F exclusively, during the holding period.

3.2.1.2 Holding in frozen state. Prior to processing, fresh chilled bone-in turkey may be frozen and held for up to 75 days from date of initial acceptance provided that the turkey is placed in freezer within 4 hours after acceptance and frozen to 0°F within 72 hours, that the turkey is packaged to protect it from freezer deterioration or other damage, and that the temperature of the turkey does not exceed 0°F during the holding period.

3.2.2 Wheat flour. The flour shall be general purpose white (bleached), free from mold and free from lumps that do not break under light finger pressure. In addition, flour shall comply with the bacteriological requirements of MIL-STD-900.

3.2.3 Cornstarch. The cornstarch shall be white, odorless, finely pulverized, modified waxy maize food starch for use in canned foods. The starch shall be bland with essentially no cereal or starch taste, and comply with bacteriological requirements of MIL-STD-900.

3.2.4 Salt. Salt shall be non-iodized, white, refined sodium chloride with or without anti-caking agents.

3.2.5 Monosodium glutamate. The product shall be odorless, free flowing and may have either a slightly sweet or slightly salty flavor. The crystals shall be white and translucent.

3.2.6 Chicken broth. Chicken broth shall be clear, essentially fat free with approximately 3.0 to 3.5 percent solids and may contain seasonings and/or flavor enhancers such as monosodium glutamate, disodium insosinate or disodium guanylate, and be produced in USDA inspected plants in accordance with USDA regulations.

3.2.7 Onion powder. Onion shall be dehydrated onion powder with or without anti-caking agents. The onion shall be pungent, free flowing, of a bright uniform color, practically free from outer skin and scorched particles, and free from stem, root base, soil and mold. Onion powder shall conform to type I, style 2 of JJJ-O-1866.

3.2.8 White pepper. The ground white pepper shall be derived from the dried mature berries of Piper nigrum L. from which the outer covering or outer and inner coverings have been removed, conforming to EE-S-631. Volatile oil content shall be not less than 1.0 milliliters per 100 grams.

3.2.9 Garlic powder. Garlic shall be dehydrated garlic powder that is pungent, free flowing, of a uniform light color, practically free from skin

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:02Z
Check the source to verify that this is the current version before use.

and scorched particles and free from husk, root base stem, soil and mold. Garlic powder shall conform to type II of JJJ-O-1866.

3.2.10 Caramel color. Caramel color shall be dry, readily soluble, brown powder made from sucrose or glucose.

3.2.11 Vegetable oil. The vegetable oil shall be cotton seed oil, or corn oil or a combination of both, and which complies with the commodity requirements for type B of JJJ-S-30.

3.2.12 Ground celery seed. Ground celery seed shall be prepared from the seed of Apium gravealens L. The ground celery seed shall be light to rich brown in color and possess a characteristic celery odor and flavor with a warm slightly bitter aftertaste. Volatile oil content shall be not less than 2 ml/100 g. Celery seed shall conform to type II of EE-S-631.

3.2.13 Sugar. Sugar shall be refined, non-invert, liquid or granulated, cane or beet, or both. The sugar shall comply with MIL-STD-900.

3.2.14 Thyme flavoring. The thyme flavoring shall be prepared from the extractives of the dried leaves of Thymus vulgaris L. by properly blending and dispersing a minimum of 4.0 percent of the total extractive of thyme on a soluble dry edible carrier.

3.2.15 Sage. Ground sage shall be derived from the dried leaves of Salvia officenalis L. The sage shall be a green to gray-green color, with a fragrant aromatic odor and a slightly bitter taste. The volatile oil content shall be not less than 1.0 ml/100g. Sage shall conform to type II of EE-S-631.

3.2.16 Water. Water used for formulation and washing shall conform to the National Interim Primary Drinking Water Regulations.

3.2.17 Marjoram. Ground marjoram shall be derived from the dried leaves of Marjorana hortensis m. The ground marjoram shall be light green to light gray-green in color and possess an aromatic, slightly sharp taste. A minimum of 95 percent by weight shall pass through a US Standard No. 30 sieve. Volatile oil content shall be not less than 0.8 ml/100 g. Marjoram shall conform to type II of EE-S-631.

3.3 Preparation and processing.

3.3.1 Turkey processing. Turkeys shall be skinned and raw boned. The wing tips, drumsticks, giblets, necks, backs, and boney material shall be excluded. The boned turkey meat shall be free from pin feathers, blood clots and bruises, bone or hard tendons measuring greater than 0.3 inch and large blood vessels.

3.3.1.1 Boneless meat. The boneless white and dark meat shall be comprised of at least 50 percent white meat, with at least 80 percent of the white and dark meat being produced from whole or half breasts and thighs.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:02Z
Check the source to verify that this is the current version before use.

3.3.1.2 Turkey roll preparation. The turkey rolls shall be prepared as follows:

Ingredients	Percent
Turkey meat	88.29
Skins, raw, finely ground	10.71
Salt	1.00
	100.00

a. The meat shall be diced or chunked into pieces measuring not less than 2 inches or ground through a kidney plate with openings (2 holes) measuring not less than 2 inches in diameter.

b. The meat shall be mixed with the finely ground skin and salt. Mixing shall continue until the meat becomes tacky.

c. The mixed meat shall be mechanically stuffed into a No. 7 regenerated cellulose prestuck casing. The resultant rolls shall be pressed between spring loaded screens, to provide rolls that approximate the shape as indicated in figure 1. Alternatively, the mixed meat may be mechanically stuffed into suitable plastic bags (bags that are capable of preventing freeze dehydration and freezer burn), frozen, tempered, pressed and formed in a hydraulic meat press, to provide a roll that approximates the shape as indicated in figure 1. The frozen rolls shall be held for not more than 10 days prior to cooking.

d. The shaped, or formed rolls shall be cooked in a water bath or in an oven in a steam or high humidity atmosphere to an internal temperature of 155°F. The water or oven shall not exceed 190°F.

e. The cooked rolls shall be immediately cooled to between 32° to 40°F following cooking. When the cooked rolls are not to be processed into the finished product within 24 hours after cooking, rolls shall be placed in a freezer at 0°F or lower within 4 hours after cooking and frozen to 0°F within 6 hours after placement in the freezer, and held in the frozen state for not more than 14 days. The chilled or thawed roll shall be held at a temperature of between 32° to 40°F for not more than 72 hours prior to removal for further processing.

f. The cooked rolls shall be sliced to yield 16 slices per pound.

3.3.2 Gravy preparation. The following ingredients shall be used in the preparation of the gravy:

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:02Z
Check the source to verify that this is the current version before use.

Ingredients	Percent
Water	51.30
Chicken broth	34.58
Turkey skins, emulsified	4.30
Cornstarch	3.60
Flour	2.50
Monosodium glutamate	1.25
Vegetable oil	1.00
Onion powder	0.80
Sugar	0.42
Caramel color	0.10
White pepper, ground	0.05
Celery seed, ground	0.04
Garlic powder	0.03
Marjoram, ground	0.01
Thyme, flavoring	0.01
Sage, ground	0.01
	100.00

NOTE: Turkey skins used in gravy formula shall be in satisfactory condition at the time of inclusion in the gravy preparation. If turkey skin is frozen it shall be placed in freezer within 4 hours after acceptance and frozen to 0°F within 72 hours.

The gravy shall be prepared as indicated below:

a. Add turkey skins to a small quantity of broth and water in an emulsifier and mix until skins are emulsified (pasty consistency).

b. A slurry shall be made with the starch, flour and part of the water.

c. The remaining ingredients and emulsified skin shall be mixed together and heated to approximately 140°F. The starch and flour slurry shall be added and the final mixture heated to 180°F and held for approximately 5 minutes at this temperature.

d. The volume of the final mixture shall be adjusted with water before tray filling to compensate for evaporation loss during heating.

e. If the gravy is not to be immediately filled into the cans, it shall be cooled and held at a minimum temperature of 150°F. The holding time from end of preparation until filling into the cans shall not exceed 4 hours.

3.4 Tray pack filling and sealing. Each tray pack can (see 5.1.1) shall be filled with turkey slices and gravy such as to conform to the finished product requirements listed below. The temperature of the turkey slices at time of filling shall be between 32°F and 40°F unless filling is done immediately after cooking. The temperature of the gravy at time of filling shall be 150°F or higher. Each can shall be hermetically sealed immediately after filling.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:02Z
Check the source to verify that this is the current version before use.

a. Each can shall contain a minimum of 72 intact turkey slices (approximately 72 ounces) shingle layered in two rows and covered with approximately 34 ounces of gravy.

b. The average net weight shall be 106 ounces minimum.

c. No individual can shall contain less than 104 ounces of product.

d. No individual can shall contain less than 61 ounces of drained turkey slices.

3.5 Tray pack thermoprocessing. The filled and sealed tray pack cans shall be thermostabilized by retorting until a sterilization value (F_o) of not less then 6.0 has been achieved.

3.6 Finished product. The finished product shall comply with the following requirements:

a. There shall be no foreign material such as, but not restricted to glass, paint, metal, dirt, insect, insect parts, hair, wood, or paper.

b. There shall be no foreign odors or flavors such as, but not restricted to rancid, scorched, burnt, stale, sour or moldy.

c. There shall be no foreign colors such as but not restricted to blue or green.

d. There shall be no feathers.

e. There shall be no blood clots, bruises, bone or hard tendons measuring more than 0.3 inch in any dimension.

f. The texture of the turkey slice shall not be dry, rubbery or mushy.

g. Gravy shall be light tan to dark tan in color.

h. Gravy shall not be thick, thin or lumpy.

i. Slice shall approximate that in figure 1.

j. The average fat content of the finished product shall not exceed 10.0 percent and no individual tray pack shall have a fat content which exceeds 12.0 percent.

k. The salt content of the finished product shall be not less than 0.5 percent nor more than 1.25 percent.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:02Z
Check the source to verify that this is the current version before use.

3.6.1 Palatability. The product shall be equal to or better than the approved preproduction sample (see 6.1) in palatability and overall appearance.

3.7 Plant qualification. The poultry component and the finished product shall originate and be produced, processed, and stored in plants regularly operating under Poultry Products Inspection Regulations of the U.S. Department of Agriculture.

3.8 Federal Food, Drug, and Cosmetic Act. All deliveries shall conform in every respect to the provisions of the Federal Food, Drug, and Cosmetic Act and reder Meat and Poultry Inspection Regulations of the U.S. Department of Agriculture.

4. QUALITY ASSURANCE PROVISIONS

4.1 Contractor's responsibility. Inspection and acceptance by the USDA shall not relieve the contractor of obligation and responsibility to deliver a product complying with all requirements of this specification. The contractor shall assure product compliance prior to submitting the product to the USDA for any inspection.

4.2 Inspection and acceptance service. Product acceptability shall be determine by the USDA. The USDA will determine the degree of acceptance service necessary to assure compliance with the requirements of this specification. The cost of grading and acceptance services performed by the USDA involving inspection, official documentation, and related services shall be borne by the contractor.

4.3 First article inspection. When a first article is required (see 6.1), it shall be inspected in accordance with the quality assurance provisions of this specification and evaluated for overall appearance and palatability. Any failure to conform to the quality assurance provisions of this specification or any appearance or palatability failure shall be cause for rejection of the first article.

4.4 Component and material inspection. Components and materials shall be inspected in accordance with the requirements of referenced specifications, drawings, and standards unless otherwise excluded, amended, modified, or qualified in this specification or applicable purchase document.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:02Z
Check the source to verify that this is the current version before use.

4.4.1 Ingredient examination. Conformance of ingredients to identity and condition requirements shall be determined by examination of pertinent labels, markings, U.S. Grade certificates, invoices, certificates of analysis, or other valid documents. In addition, each ingredient shall be examined organoleptically as necessary to determine conformance to the condition requirements. Any nonconformance to an identity, condition, or other requirement shall be cause for rejection of the ingredient lot or of any involved product.

4.5 In-process examination. In-process examination shall be performed to determine conformance to the preparation, processing, can interior coating, filling, sealing and packing requirements. Any nonconformance revealed by actual examination or by review of records of time, temperature, and formulation or other valid documents shall be cause for rejection of the involved product.

4.6 Tray pack inspection. The inspection lot shall include only tray packs produced in one workshift. The USDA reserves the right to separate the inspection lot into smaller inspection lots.

4.6.1 Net weight inspection. Randomly select 30 filled and sealed tray pack cans from the inspection lot and weigh separately. Subtract the average tare weight (determine by randomly selecting and weighing 30 of the empty tray pack cans and lids used in preparing the product and dividing by 30) from the weight of each tray pack in the sample. Results shall be reported to the nearest ounce. If the average net weight is less than 106 ounces or if the net weight of any individual can is less than 104 ounces, the lot shall be rejected.

4.6.2 Product inspection. Eight tray packs shall be selected at random from the lot. The eight tray packs shall be heated 15 minutes in 140° to 150°F water, opened, and inspected in accordance with table I.

a. If no defects are found, the lot shall be acceptable.

b. If two or more major defects are found, the lot shall be rejected.

c. If only one major defect is found, a second sample of eight tray packs shall be selected at random from the lot, heated as above, and inspected for the defects indicated in table I. If any defect is found in the second sample, the lot shall be rejected.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:02Z
Check the source to verify that this is the current version before use.

TABLE I. Product inspection 1/ 2/

Category	Defect
Major	
151	Drained weight of turkey slices in a can is less than 61 ounces. 3/
152	Fewer than 72 intact slices in a can.
153	Meat texture dry, rubbery and or mushy.
154	Gravy too thick, thin, or lumpy.
155	Gravy not light tan to dark tan.
156	Presence of blood clots, bruises, large blood vessels, hard tendons or bones measuring more than 0.3 inch in any dimension.
157	Presence of feathers.
158	Slice does not approximate that shown in figure 1.

1/ The presence of any foreign material (e.g., glass, dirt, insect parts, hair, wood, metal, etc.), foreign odor or flavor (e.g., burnt, scorched, moldy, rancid, sour, stale, etc.) or foreign color shall be cause for rejection of the lot.

2/ Product not equal to or better than the approved preproduction sample (see 6.1) in palatability or overall appearance shall be cause for rejection of the lot. (This comparison shall be performed only when deemed necessary by an AMS agent.)

3/ To determine drained weight, the free liquid in the can shall be poured off and the remaining contents shall be poured into a flat bottom container. A minimum of three times the tray pack can's volume of 190° to 212°F water shall be added to the container so as to cover the contents. The contents and water shall be agitated such as to liquify rendered fat and to remove the gravy without breaking the turkey slices. The contents shall then be poured into a U.S. Standard 1/4-inch sieve in a manner that will distribute the product over the sieve without breaking the turkey

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:02Z
Check the source to verify that this is the current version before use.

slices. Sieve area shall be such that the distributed product does not completely cover all the openings of the sieve. The sieve shall be tilted slightly and allowed to drain 2 minutes before determining the drained weight by subtracting the sieve tare weight from the gross weight. The drained weight shall be reported to the nearest 0.1 ounce.

4.6.3 Fat and salt content testing. Nine tray packs shall be selected from the lot and distributed as follows:

-Three for laboratory analysis.
-Three for submission to the contractor.
-Three for retention by an AMS agent as a reserve sample.

The three tray packs for laboratory analysis shall be individually tested for fat and salt content in accordance with the Official Methods of Analysis of the Association of Official Analytical Chemists, Chapter: Meat and Meat Products, Section: Meat, except that preparation of the samples shall be as follows. The three unopened tray packs shall be gently warmed in a water bath to melt fat adhering to the inside of the cans. The can shall be opened and the entire contents of each can shall be separately blended in a Waring blender or equivalent. The lot shall be rejected if:

a. The average fat content of the three tray packs exceeds 10.0 percent.
b. The fat content in any individual tray pack exceeds 12.0 percent.
c. The salt content in any individual tray pack is less than 0.5 percent or more than 1.25 percent.

Analysis of reserve samples at the request of the contractor shall not be permitted unless the original laboratory analysis indicated that the involved lot will be rejected because of noncompliance with the fat or salt content requirement. When the reserved sample is analyzed, the analyses for both fat and salt shall be made and will be considered final. Unused reserve samples shall be returned to the contractor for inclusion in subsequent lots.

4.7 Can condition examination. Examination of filled and sealed tray pack cans shall be in accordance with the United States Standards for Condition of Food Containers, except that inspection for labeling shall be in accordance with MIL-L-1497 (see 5.4).

4.8 Shipping container examination. Shipping containers shall be examined for defects in assembly, closure, and reinforcement in accordance with the appendix of PPP-B-636. In addition, the following defects shall be classified as follows: Major: National stock number, item description, contract number, or date of pack markings missing, incorrect, or illegible. Minor: (1) Other required markings missing, incorrect, or illegible; (2) Interior packing with fiberboard liner or pads not as specified; (3) Reinforcement with nonmetallic strapping or tape is not used; (4) Height of box liner less than inside depth dimension of box by more than 1/8 inch or extends above the top edge of box.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:02Z
Check the source to verify that this is the current version before use.

4.9 Unit load inspection. Inspection of unit loads shall be in accordance with the quality assurance provisions of MIL-L-35078.

5. PREPARATION FOR DELIVERY

5.1 Packaging. The product shall be packaged in accordance with level A or C as specified (see 6.1).

5.1.1 Level A. A size 1001 by 1206 by 200 tray pack can shall be filled with 106 ounces of the food product, sealed, and thermoprocessed as specified in 3.4 and 3.5. The base plate of the can shall be electrolytic chromium-coated steel and shall be sufficient temper to protect the product during shipment and storage. The base plate weight of the body and end of each can shall be 90 pounds per base box. The entire inside area of the can shall be coated. The can shall be coated overall on the outside with a coating conforming to type I of TT-C-495.

5.1.2 Level C. The product shall be packaged as specified in 5.1.1, except that cans with commercial exterior coating will be acceptable.

5.2 Packing. The product shall be packed in accordance with level A, B, or C as specified (see 6.1).

5.2.1 Level A packing. Four cans of product, packaged as specified in 5.1, shall be packed in a snug-fitting fiberboard box, constructed and closed in accordance with style RSC-L, grade V2s of PPP-B-636. The cans shall be packed flat, four in depth within the box. The inside of each box shall be provided with a box liner and five fiberboard pads. The height of the box liner shall be equal to the full inside depth of the box (+ 0 inch, - 1/8 inch). The pads shall be placed between the cans and on the top and bottom of the stacked cans. The pads shall be full length and width and be fabricated of grade V3c fiberboard. Each fiberboard box shall be reinforced with nonmetallic strapping or pressure-sensitive adhesive filament reinforced tape in accordance with the appendix of PPP-B-636.

5.2.2 Level B packing. Four cans of product, packaged as specified in 5.1, shall be packed as specified in 5.2.1, except the box shall be constructed of grade V3c, V3s or V4s fiberboard.

5.2.3 Level C packing. Four cans of product, packaged as specified in 5.1 shall be packed in a snug-fitting fiberboard box, constructed and closed in accordance with style RSC-L, class domestic, grade 275 of PPP-B-636. The cans shall be packed flat, four in depth within the box. The inside of each box shall be provided with a box liner and five fiberboard pads. The height of the box liner shall be equal to the full inside depth of the box (+0 inch, - 1/8 inch). The pads shall be placed between the cans and on the top and bottom of the stacked cans. The pads shall be full length and width and be fabricated of the same material as the box.

Source: https://assist.dla.mil -- Downloaded: 202610-26T12:02Z
Check the source to verify that this is the currentversion before use.

5.3 Unit loads. When specified (see 6.1), the product, packed as specified in 5.2, shall be arranged in unit loads in accordance with MIL-L-35078 for the type and class of load specified. When unit loads are strapped, the strapping shall be limited to nonmetallic strapping.

5.4 Labeling. Each package shall be labeled in accordance with MIL-L-1497. Paper labels are not permitted. Cans shall show the following statements:

TO HEAT

a. To heat in water: Submerge unopened can in boiling water. Simmer gently 35 minutes. Remove from water and open lid for serving.

b. To heat in oven: Either punch several holes in lid of tray can or open can in usual manner leaving the loose lid in place to prevent moisture loss. Place in a 350°F oven for approximately 35 to 40 minutes until contents reach an internal temperature of 165°F.

WARNING: Do not place closed cans in oven, as heating will increase internal pressure which may cause the can to burst.

YIELD

Eighteen (18) servings (4 slices per serving)

5.5 Marking.

5.5.1 Shipping containers. In addition to any special marking required by the contract, shipping containers shall be marked in accordance with MIL-STD-129.

5.5.2 Unit loads. Unit loads shall be marked in accordance with MIL-L-35078. In addition, the following precautionary markings in capital letters larger than other markings shall be included:

CAUTION: DO NOT STACK PALLETS IN TRANSIT OR MORE THAN TWO HIGH IN STORAGE.

6. NOTES

6.1 Ordering data. Procurement documents should specify the following:

a. Title, number and date of this specification.
b. When a first article is required (see 3.1, 4.3, and 6.3).
c. Provisions for approved preproduction samples (see 3.6.1 and 6.3).
d. Level of packaging and packing required (see 5.1 and 5.2).

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:02Z
Check the source to verify that this is the current version before use.

e. Type and class of unit load when unit loading is required (see 5.3).

6.2 Appropriate level of pack. Based on the conditions known or expected to be encountered during shipment, handling and storage of the specific item being procured, the procuring activity should select the appropriate level of pack in accordance with the criteria established in AR 700-15/NAVSUPINST 4030.28/AFR71-6/MCO 4030.33A/DLAR 4145.7.

6.3 First article inspection. When a first article is required, it shall be inspected and approved under the appropriate provisions of DAR 7-104.55. The first article should be a preproduction sample. The contracting officer should include specific instructions in all acquisition documents regarding arrangements for selection, inspection, and approval of the first article.

INSTRUCTIONS: In a continuing effort to make our standardization documents better, the DoD provides this form for use in submitting comments and suggestions for improvements. All users of military standardization documents are invited to provide suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge *(DO NOT STAPLE)*, and mailed. In block 5, be as specific as possible about particular problem areas such as wording which required interpretation, was too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate the problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

NOTE: This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document*(s)* or to amend contractual requirements.
