MILITARY SPECIFICATION

CARTRIDGES, CENTERFIRE, FOR RIFLE, PISTOL, AND REVOLVER (COMMERCIAL)

This specification was approved by the Departments of the Army, the Navy, and the Air Force for use of procurement services of the respective Departments

1. SCOPE AND CLASSIFICATION

1.1 Scope.—This specification covers centerfire metallic cartridges of various calibers and of commercial manufacture, for use in rifle, pistol, or revolver, for which individual Government drawings and specifications do not exist. It is intended that the ammunition be manufactured and accepted in accordance with established commercial standards and practices.

1.2 Classification.

1.2.1 *Type and grade.*—This specification covers cartridges of one type, centerfire, metallic; and one grade, commercial.

2. APPLICABLE SPECIFICATIONS AND OTHER PUBLICATIONS

2.1 Specification.—The following specification, of the issue in effect on date of invitation for bids, forms a part of this specification:

U. S. Army Specification

100–2—Standard Specification for Marking Shipments by Contractors.

(Copies of specifications should be obtained from the procuring agency or as directed by that agency. Both the title and identifying number or symbol should be stipulated when requesting copies.

2.2 Other publications.—The following publications, of the issue in effect on date of invitation for bids, form a part of this specification:

Bureau of Supplies and Accounts Publication

Navy Shipment Marking Handbook:[1]

(Copies of the Navy Shipment Marking Handbook may be obtained upon application to the Bureau of Supplies and Accounts, Navy Department, Washington 25, D. C., except that activities of the Armed Forces should make application to the Supply Officer in Command, Naval Supply Center, Norfolk 11, Va.)

[1] Applicable only to Navy shipments.

Sporting Arms and Ammunition Manufacturers' Institute

Technical Committee Manual.

(Copies of the Technical Committee Manual may be obtained upon application to the Secretary, Sporting Arms and Ammunition Manufacturers' Institute, 343 Lexington Avenue, New York 16, N. Y.)

3. REQUIREMENTS

3.1 Material.—The materials used in all components shall conform to the commercial standards normally applicable for routine production of the cartridge specified in the purchase contract.

3.2 Identification.—Each cartridge lot shall be identified by a number and by the name of the contractor.

3.3 Visual and dimensional requirements.—The cartridges shall be in accordance with the contractor's visual and gaging requirements, provided such requirements conform to normal commercial practice.

3.4 Velocity.—The minimum average velocity shall be that specified for the appropriate grade, type, and caliber of cartridge in the Technical Committee Manual of the Sporting Arms and Ammunition Manufacturers' Institute.

3.5 Pressure.—The maximum average pressure shall be that prescribed for the appropriate cartridge in the Technical Committee Manual of the Sporting Arms and Ammunition Manufacturers' Institute.

3.6 Other requirements.—Other requirements of a particular type such as primer sensitivity, function and casualty, and accuracy, shall conform to established commercial standards for such ammunition.

3.7 Processing by contractor.—No lot of cartridges shall be submitted to the Government inspector for acceptance unless the con-

tractor has visually inspected and gaged sufficient samples to insure compliance with this specification. The contractor shall furnish the Government inspector a report, in duplicate, showing the results of the visual inspection and gaging. This inspection shall not be interpreted to mean acceptance by the purchasing agency.

3.8 Workmanship.—The workmanship of the assembled cartridge shall conform to the normal production and acceptance standards for commercial ammunition, of corresponding type, intended for domestic consumption.

4. SAMPLING, INSPECTION, AND TEST PROCEDURES

4.1 Lot.—Normally, and unless otherwise specified, a lot shall consist of the number of cartridges produced in 1 day at the particular plant or unit concerned. However, where a day's production is relatively small, a lot may include the production of 2 or more consecutive days, but not more than 2,000,000 cartridges.

4.2 Sampling. — The acceptance samples shall be selected in the manner and in the quantity ordinarily used by the contractor for regular acceptance of commercial ammunition of appropriate type. Unless otherwise specified, the inspection and firing tests shall be made at the place of manufacture, using the contractor's facilities, personnel, and equipment.

4.3 Visual inspection and gaging.—Inspection and gaging shall be made in accordance with accepted commercial practice to insure conformity to applicable drawings with dimensions and tolerances as established by the Technical Committee of the Sporting Arms and Ammunition Manufacturers' Institute.

4.4 Acceptance tests.

4.4.1 *Velocity.*—All firing shall be in the weapons, using the technique, velocity measurement distances, etc., specified for the appropriate cartridge in the Technical Committee Manual of the Sporting Arms and Ammunition Manufacturers' Institute.

4.4.2 *Pressure.*—All firings shall be in the equipment, using the technique, piston diameter, piston location, pressure cylinders, gas checks, tarage tables, etc., specified for the appropriate cartridge in the Technical Committee Manual of the Sporting Arms and Ammunition Manufacturers' Institute.

4.4.3 *Other tests.*—Any other acceptance test deemed necessary to the Government inspector shall be made in accordance with provisions of the Technical Committee Manual of the Sporting Arms and Ammunition Manufacturers' Institute, when provided for therein, otherwise, the test shall be made in accordance with the contractor's usual practice.

5. PREPARATION FOR DELIVERY

5.1 Packing.—Unless otherwise specified, the cartridges shall be packed in accordance with usual commercial practice.

5.2 Labeling and marking.—Each cardboard carton and each exterior shipping container shall be marked on the outside with the manufacturer's name or identifying mark. The ammunition lot number shall be placed on each cardboard carton and exterior shipping container. Marking of the carton may be either inside or outside, at the manufacturer's option but marking of the exterior shipping container shall be upon the outside. Unless otherwise specified, marking of shipments shall be in accordance with specification 100–2; except that for the Navy it shall be in accordance with the Navy Shipment Marking Handbook.

6. NOTES

6.1 Ordering data. — Procurement documents should specify the following:

a. Title, number, and date of specification.

b. Caliber and weapon to be used in. (See 1.1.)

Notice.—When Government drawings, specifications, or other data are used for any purpose other than in connection with a definitely related Government procurement operation, the United States Government thereby incurs no responsibility nor any obligation whatsoever; and the fact that the Government may have formulated, furnished, or in any way supplied the said drawings, specifications, or other data is not to be regarded by implication or otherwise as in any manner licensing the holder or any other person or corporation, or conveying any rights or permission to manufacture, use, or sell any patented invention that may in any way be related thereto.
