COMMERCIAL ITEM DESCRIPTION

FORMING MACHINE, SETTING DOWN TYPE, MANUALLY OPERATED, BENCH MOUNTED

The General Services Administration has authorized the use of this commercial item description in preference to type IV of Military Specification MIL-F-23243A.

1. SCOPE

1.1 Scope. This description covers manually operated, setting down forming machines of the standard, heavy duty, commercial type, that are used in a production environment for squeezing or pinching together the flanges of the bottom and sides of cylindrical containers prior to the finishing operation. The machines are intended for use in sheet metal shops and repairs units for fabrication operations on cylindrical containers.

1.2 Classification. The setting down, forming machine shall be of the following sizes. The size to be furnished shall be as specified (see 6.1).

Size 18 - 18 gauge (0.0478 inch) capacity.
Size 20 - 20 gauge (0.0359 inch) capacity.
Size 24 - 24 gauge (0.0239 inch) capacity.

2. APPLICABLE DOCUMENTS

2.1 Documents. The following documents of the issue in effect on the date of invitation for bids or request for proposals form a part of this description to the extent specified herein.

Military Specification MIL-M-18058	- Machinery, Metal and Woodworking, Packaging of.
Federal Standard FED-STD-376	- Preferred Metric Units for General Use by the Federal Government.
American Society for Testing and Materials ASTM D 3951	- Standard Practice for Commercial Packaging.

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

3. SALIENT CHARACTERISTICS

3.1 Design. The setting down forming machine shall be new and of the manufacturer's commercial design in effect on the date of the solicitation. The machine shall be capable of performing the setting down or pinching together operations of the bottom and sides of cylindrical containers of the rated thickness capacity specified in table I for the size machine specified. The machine shall meet the requirements specified herein and shall conform to current commercial industrial practice.

TABLE I. Setting down forming machine sizes and capacities.

Size	Gauge number	Maximum rated capacity in mild steel: Manufacturer's standard gauge (inches)	Width of edge to be closed (inches): maximum	Width of edge to be closed (inches): minimum
18	18	0.0478	1/2	1/4
20	20	0.0359	3/8	3/16
24	24	0.0239	3/16	1/8

NOTE: Unless otherwise specified value shall be not less than the value specified. Where a range is specified the value shall be the minimum or larger to the maximum or less.

3.2 Frame. The frame shall be constructed of steel or cast iron capable of supporting the shafts and drive mechanism and shall provide a suitable base connection for mounting.

3.3 Shafts. The shafts shall be of high grade machine finished steel. The shafts shall be driven by hand crank and gears and shall be fitted to bearings to provide smooth and easy operation at rated capacity.

3.4 Bearings. The bearings shall conform to standard commercial bearings used in this type machine furnished to the industrial market.

3.5 Gears. The gears shall be machine cut steel or cast iron.

3.6 Rolls. The rolls shall be machine finished steel and shall be of sufficient hardness to perform the operations for which designed. Roll faces shall be finished on an angle and shall be mounted inclined inwardly on the same angle as on the finished faces. The faces of the two rolls shall have full parallel bearing to perform the setting down operations required. A complete set of rolls shall be provided with each machine.

Check the source to verify that this is the current version before use.

3.7 Adjustment. The rolls shall be adjusted by a quick acting screw to provide the necessary pressure to perform the required operation.

3.8 Hand crank. The hand crank shall be of sufficient length to ensure operation of the machine without undue strain to the operator.

3.9 Stand. Unless otherwise specified (see 6.1), each machine shall be provided with a clamp-on offset stand for bench mounting. The stand offset shall be shaped to bring the machine forward to provide ease of operation.

3.10 Measurement system. All dimensions in this description are given in US units. These dimensions may be converted to SI units through the use of conversion factors and methods specified in FED-STD-376.

3.11 Regulatory requirements. The offeror/contractor is encouraged to use recovered materials to the maximum extent practical.

3.12 Workmanship. Workmanship of the setting down forming machine shall be of a quality equal to that of comparable products furnished to the commercial market.

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection, examination, and test requirements specified herein. Except as otherwise specified in the contract or purchase order, the contractor may use his own or any other facilities suitable for the inspection requirements specified herein, unless disapproved by the Government. The Government reserves the right to perform any of the inspections, examinations, or tests set forth in this description where such inspections, examinations, and tests are deemed necessary to assure supplies and services conform to prescribed requirements.

4.2 Examination. Each machine shall be visually examined to determine conformance with all requirements of this description.

4.3 Operational test. Each machine shall be operated without performing metal forming operations to ensure freedom of movement of the gears, adjusting mechanisms, and changeability of rolls.

4.4 Packaging inspection. Packaging shall be inspected to determine compliance with the requirements of section 5.

5. PACKAGING

5.1 Preservation, packing, and marking. Unless otherwise specified in the contract or purchase order preservation, packing, and marking shall be in accordance with ASTM D 3951. When specified (see 6.1), level A preservation, level A or level B packing, and marking shall be in accordance with MIL-M-18058.

6. NOTES

6.1 Ordering data. Purchasers should select the preferred options permitted herein, and include the following information in procurement documents:

a. Title, number, and date of this commercial item description.
b. Size of setting down forming machine required (see 1.2).
c. Type of stand, if different (see 3.9).
d. Packaging in accordance with MIL-M-18058,if required specify level of preservation and packing (see 5.1).

6.2 Cross reference data. Items covered by Military Specification MIL-F-23243A are cross referenced to items covered by this description as follows:
