DEPARTMENT OF DEFENSE INTERFACE STANDARD

Satellite Data Link Standard (SDLS) For Advanced Extremely High Frequency (AEHF) Extended Data Rate (XDR) Uplinks and Downlinks (U)

MIL-STD-3015A dated 15 April 2009 is a classified (SECRET/NOFORN) document that contains technical standards and design objectives for use by all Military Departments and Agencies in their systems requiring space/ground communications operating in the 44/20 GHz band and which support data rates from 75 bps to 8192 kbps for XDR up and down links for Satellites in near circular, geosynchronous orbits. This standard can also be adopted for use in other types of orbits, after consideration of specific orbital parameters. This standard will ensure terminal-to-satellite and terminal-to-terminal interoperability between compliant satellites and terminals.

Because of it's classification, the distribution of this military standard is restricted to DoD Organizations that have a verified need-to-know. All releases of this standard require the approval of the Preparing Activity (PA). Written request for the standard shall be submitted to:

Director
Defense Information Systems Agency
ATTN: MIL-STD-3015A PA
Fort Meade, MD 20755-0549

Custodians:
Army - CR
Navy – EC
Air Force - 02
NSA – NS

Preparing Activity:
DISA – DC1

Review Activities:
OASD – IR
Army – AC
Navy – CG, MC
Air Force – 11, 13, 93
DISA – DC5
OUSD (AT&L) - SE

AMSC N/A

AREA TCSS

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.
