COMMERCIAL ITEM DESCRIPTION

IRONING BOARD, PAD, AND COVER (HOUSEHOLD)

The General Services Administration has authorized the use of this commercial item description (CID), for all Federal agencies.

1. SCOPE

1.1 Scope. This commercial item description covers household metal ironing boards, ironing board pads, and ironing board covers.

2. CLASSIFICATION

2.1 Classification. The ironing boards, pads, and covers shall be of the following types and classes , as specified (see 7.2).

Type I - Ironing board with pad and class B cover.

Type II - Ironing board pad.

Type III - Ironing board cover
Class A - Uncoated cotton.
Class B - Teflon treated or silicone-aluminum coated cotton.

3. SALIENT CHARACTERISTICS

3.1 Ironing board. The ironing board shall provide a stable, smooth, ventilated ironing surface and shall have the following characteristics.

A. The ironing board shall be made of commercial grade, cold rolled steel and shall have a baked enamel finish or an electrostatic powder coated finish, at the manufacturer's option.
B. The ironing board shall have a T-leg or four-leg design, at the option of the manufacturer, and shall have a non-mar, non-skid cushioning cap over the end of each leg.
C. The ironing board shall have a means of opening, closing, and locking to a selected ironing surface height.
D. The ironing board surface height shall be adjustable to any height ranging from 24 ± 1 inches (61.0 ± 2.5 cm) up to 36 ± 1 inches (91.4 ± 2.5 cm), measured from the top surface of the ironing board to the floor. A positive retention feature shall maintain the selected ironing surface height and prevent the ironing board from collapsing.
E. The ironing board shall fold flat for storage.
F. The ironing surface shall be perforated or expanded mesh design, at the manufacturer's option.
G. The ironing surface shall have the shape and dimensions shown in Figure 1. The corners at the wide end shall be slightly rounded.

Beneficial comments, recommendations, additions, deletions, clarifications, etc. and any data which may improve this document should be sent to: General Services Administration, Engineering Branch (7FXEE), 819 Taylor Street, Fort Worth, TX 76102-6114.

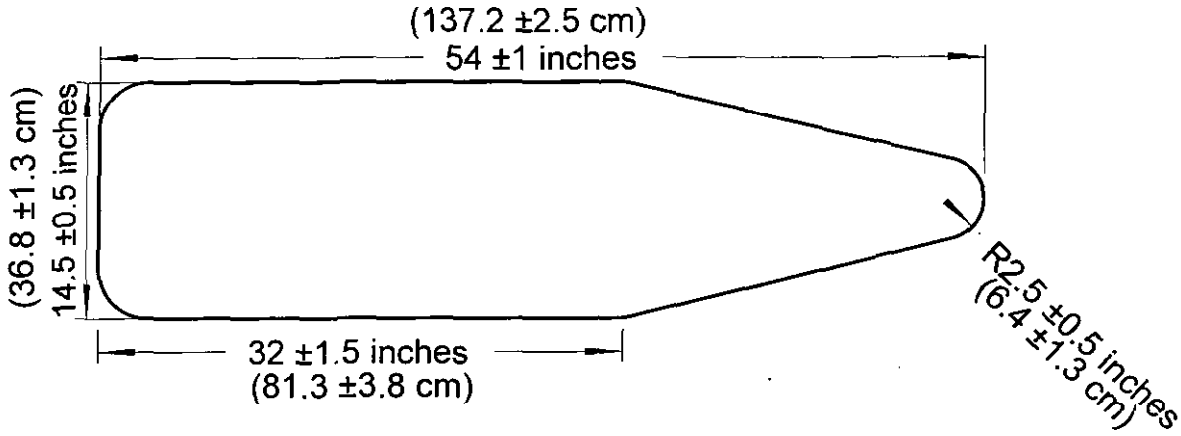

Figure 1. Top View

3.1.1 Ironing board performance. The ironing board shall be rigid, stable, free of wobble, and capable of supporting a 50 pound (22.7 kg) weight placed in the center of the board within a bearing area of not more than 64 square inches (412.9 sq cm) for three minutes. The ironing board shall support the specified weight without a permanent deflection in the top surface and shall maintain all height positions.

3.2. Ironing board pad. The ironing board pad shall fit the ironing board described in this CID (see 3.1 and Figure 1) and shall have the following characteristics.

A. The pad shall cover the entire ironing surface of the ironing board.
B. The pad shall be cut in one piece.
C. A separate nose piece, wide enough to securely hold the end of the pad to the end of the ironing board, shall be sewn to the tapered end of the pad.
D. The pad shall be an assembly of a top and a bottom layer of interlocked synthetic and natural fibers with a natural or synthetic foam rubber core or shall be a combination of interlocked synthetic and natural fibers without a core. The pad shall be 1/4 inch (0.6 cm) thick, minimum, and shall weigh 14 oz/sq yd (466.7 g/sq m), minimum.
E. At the manufacturer's option, the pad may have a natural or synthetic foam rubber backing.
F. The entire perimeter of the pad shall be finished with binding tape or overedge stitching. The edge finish shall be sewn through all component layers of the pad.

3.3 Ironing board cover. The ironing board cover shall fit the ironing board described in this CID (see 3.1 and Figure 1) and shall have the following characteristics.

A. The cover shall be large enough to be securely fitted over the ironing board top with the pad in place.
B. The cover shall be unbleached, sized or unsized, 100 percent cotton sheeting or drill (see 3.3.1 and 3.3.2).
C. The cover shall be coated or uncoated as specified (see 2.1, 3.3.1, 3.3.2, and 7.2).
D. The cover shall be cut in one piece. A separate nose piece may be attached at the tapered end of the cover, at the manufacturer's option.
E. The edges of the cover shall be finished with a hem or binding and shall have one of the following means of holding the cover on the ironing board. Additional tie tapes may be furnished, at the option of the manufacturer.
   a) Drawstring method. A drawstring, encased in an edge hem or binding, shall extend around the entire perimeter of the cover. The drawstring shall extend a minimum of 4 inches (10.2 cm) beyond the opening at each end of the hem or binding. The drawstring shall be durable enough and strong enough to hold the cover and pad to the ironing board under normal use.
   b) Elastic method. An elastic binding shall be securely sewn around the entire perimeter of the cover. The elastic binding shall be durable enough and strong enough to hold the cover and pad to the ironing board under normal use.

3.3.1 Class A ironing board cover cloth. The cloth for the class A cover shall have a minimum yarn count per inch (per 2.5 cm) of 48 x 44 and minimum weight before sizing of 3.5 oz/sq yd (116.7 g/sq m).

3.3.2 Class B ironing board cover cloth. The base cloth for the class B cover shall have a minimum yarn count per inch (per 2.5 cm) of 50 x 50 and minimum weight of 1.4 oz/sq yd (83.3 g/sq cm) before Teflon treatment or silicone-aluminum coating. The coating shall be uniformly applied to the face of the cover and shall not crock, transfer, or rub off during normal use. The coated cloth shall show no pin holes when held up to a bright light.

3.4 Workmanship. The finished ironing board, pad, or cover, as applicable, shall be clean, well made, and free of any defect affecting appearance, function or serviceability. The finished ironing board shall be free of all burrs and sharp edges. The finished ironing board pad or ironing board cover shall be free of tears, cuts, holes, weak spots, thin spots, skipped stitches, open seams, puckers, or other fabric or construction defects.

3.5 Measurement system. The values stated in inch-pound units are to be regarded as the standard. The metric values stated in parenthesis are for information purposes only.

3.6 Metric products. Products manufactured to metric dimensions will be considered on an equal basis with those manufactured using inch-pound units, providing they fall within the tolerances specified and all other requirements of this document are met. If a product is manufactured to metric dimensions and those dimensions exceed the tolerances specified in the inch-pound units, a request should be made to the contracting officer to determine if the product is acceptable.

4. REGULATORY REQUIREMENTS

4.1 Regulatory requirements. The offeror/contractor is encouraged to use recovered materials to the maximum extent practicable, in accordance with paragraph 23.403 of the Federal Acquisition Regulation (FAR).

5. QUALITY ASSURANCE PROVISIONS

5.1 Product conformance. The products provided shall meet the salient characteristics of this commercial item description, conform to the producer's own drawings, specifications, standards, and quality assurance practices and be the same product offered for sale in the commercial market. The government reserves the right to require proof of such conformance.

6. PACKAGING

6.1 Packaging. Preservation, packing, and marking shall be as specified in the contract or purchase order.

7. NOTES

7.1 Part Identification Number (PIN). Products conforming with this commercial item description shall be identified by a part number configuration consisting of identification of a portion of the CID number, type, and class. An example of a part number configuration is shown below. This part numbering system is intended for identification and cross-indexing of the item within the federal cataloging system. The following part identification numbering procedure is for government purposes and does not constitute a requirement for the contractor.

EXAMPLE: AA2973B = Teflon treated or silicone-aluminum coated cotton ironing board cover.

AA2973B
| | |____ Class (A = Uncoated cotton,
| | B = Teflon treated or silicone-aluminum coated cotton.)

| |
| |_____ Type (I = 1 = Ironing board with pad and class B cover,
| II = 2 = Ironing board pad,
| III = 3 = Ironing board cover.)
|
|_____ Commercial item description number.

7.2 Ordering data. Purchaser should select the preferred options permitted herein and include the following information in procurement documents (if applicable).

a) Title, number, and date of this commercial item description.
b) Type and class, as applicable (see 2.1).
c) Preservation, packing, and marking desired.

7.3 National stock numbers (NSNs). The following NSNs correspond to this CID. The list may not be indicative of all possible NSNs associated with the CID.

NSN	Description	Type	Class	PIN
7290-00-663-7300	Ironing board with pad and Teflon treated or silicone-aluminum coated cotton cover	I		AA2971
7290-00-633-9124	Ironing board pad	II		AA2971
7290-00-946-7905	cotton ironing board cover	III	A	AA2973A
7290-00-130-3271	Teflon treated or silicone-aluminum coated cotton ironing board cover	III	B	AA2973B

7.4 Supersession data. This commercial item description supersedes A-A-297A, Ironing Board, Household, dated September 1, 1992; A-A-1805, Cover, Ironing Board, dated February 7, 1986; and A-A-1806, Pad, Ironing Board, dated March 20, 1981.

MILITARY INTERESTS:

NONE: DoD has no registered interest in revisions to this Commercial Item Description until further notice.
