DATA ITEM DESCRIPTION
Title: NAVAL AVIATION SYSTEM SANITIZATION

Number: DI-MGMT-82149A
AMSC Number: N10321
DTIC Applicable: N/A
Preparing Activity: AS
Applicable Forms: N/A

Approval Date: 20220602
Limitation: N/A
GIDEP Applicable: N/A
Project Number: MGMT-2022-014

Use/relationship: System Sanitization is be used to identify all collateral classified and controlled unclassified information (CUI) as per the program security classification guide. Identify all semiconductor memory which includes battery backed random access memory and magnetic data storage devices in each Weapons Replaceable Assembly (WRA).

This DID contains the format, content, and intended use information for the data product resulting from the work task described in the contract statement of work (SOW).

This DID supersedes DI-MGMT-82149.

Requirements:

1. Referenced Documents: The applicable issue of the documents cited herein, including their approval dates and dates of any applicable amendments, notices, and revisions, shall be as specified in the contract.

1.1. National Institute of Standards and Technology Special Publication (NIST SP) 800-88r1 Guidelines for Media Sanitization Dec 2014.

2. Format: Contractor format is acceptable.

3. Content: The report shall contain the following:

3.1. Title Page to include:

3.1.1. Program Name.

3.1.2. Program Manager’s Name and Telephone Number.

3.2. Revision Page.

3.3. List of Reference Documents.

3.4. Table of Contents.

3.5. Body Content: System Sanitization.

Check the source to verify that this is the current version before use.

3.5.1. Describe the systems and subsystems that store, process or transmit controlled unclassified information and collateral classified data as per the program security classification guide and subsequent NIST SP 800-88 sanitization methodology.

3.5.2. For systems that require purging, describe proposed sanitization methods that will be addressed and are such that they meet the applicable guidance of the NIST SP 800-88 and the United States Navy.

3.6. Definition of abbreviations and acronyms.

4. Appendices may be used for each individual subsystem, e.g., mission management system, vehicle management system, Link-16 system, communications system. Sanitization is the removal of information from the storage device such that data recovery using any known technique or analysis is prevented.

End of DI-MGMT-82149A
