DATA ITEM DESCRIPTION

Title: Engineering Data Package

Number: DI- SESS-82166
AMSC Number: 9872
DTIC Applicable: No
Office of Primary Responsibility: MDA
Applicable Forms: None

Approval Date: 20171109
Limitation: N/A
GIDEP Applicable: No
Project Number: SESS-2017-026

Use/relationship: The engineering data package allows the Government to operate and maintain, build a copy, or transition non-mil spec hardware/software to another contractor.

This Data Item Description (DID) contains format and content for the data package generated by the specific and discrete task requirement as delineated in the contract.

Requirements:

1. Reference documents. None.

2. Format.

(a) The package and all attachments shall be Microsoft Office compatible, Portable Document Format readable, CAD/CAM standard format, or a government agreed-to other format.

(b) Text shall be prepared for standard letter size paper (8 ½ x 11").

(c) Security classification and distribution markings shall conform to the requirements of the contract, purchase description and security requirements checklist, as applicable.

3. Contents.

(a) Title Page and/or text read-me file that identifies the data by providing contract number, item name, validity date, version from first package, data files on a particular media (digital Table of Contents), and data format (for computer files).

Check the source to verify that this is the current version before use.

(b) The data package shall include the following:

1) Final inspection and acceptance test records showing unit acceptability

2) Complete unit level nonconformance reports, MRB actions, failure reports and test/failure review board actions, and associated analyses (e.g., overstress analyses, rework and repair records)

3) Identification of any unverified failures encountered with an associated risk analysis

4) Unit as-built versus as-designed configuration records with appropriate reconciliation or any deltas

5) All waivers and deviations requested and approved for the item

6) Manufacturing instructions and processes used to build the item

7) All test procedures, test records and data, inspection data, including physical and functional discrepancies, approved resolution, detailed repair and rework history and identification of the configuration items tested.

8) Analysis of trend data across the unit being tested and comparison with other like items

9) Complete identification of associated test equipment and test software, where applicable, along with critical calibration results

10) Bill of materials or component/part trace records reflecting traceability of parts, materials, and subassemblies installed

11) Logbooks

12) Product/item closeout photographs and drawings

13) System configuration, software configuration, user manuals, change requests, network and power diagrams, interface control documents, product drawings, and facility requirements document(s)

14) Certificate of Conformance (CoC) indicating final assembly has been thoroughly reviewed for conformance to requirements. Certification process shall consist of each responsible engineer providing their certification as a result of preforming a post-production pedigree review on each mission critical assembly as approved by the Government.

END OF DI-SESS-82166
